
So you are now proposing to add voice-recognition software to the array of secretaries and the legal-limit transmitters to conduct emergency communications at 200 wpm?

>You can try to ignore it into infinity, but it won't ehlp. They are there, and here inside the ARS by the thousands. Of course Riley can't issue them citations, they don't use callsigns when doing their dastardly acts. That you expect it to be otherwise is even yet more revealing of your mindset.

If they are not using call signs, how do you know they are hams? I think that those that are throwing the carriers on 14.313 might not even number in the hundreds. The majority of those that have been cited for rules violations on the air have been long-time hams. On what basis do you know that they are also freebanders?

If there is any ignoring going on here, Dick, you seem to be doing most of it..

I'm sure that's what Intel has done by now. Intel is serious about
emergency communications, Ed. They learned their lessons during the
World Series earthquake.

The drills were state mandated requirements in many parts of the country. And those drills can save lives. Remember, the drills were not designed for those at ground zero. In the fringe areas of a nuclear explosion, however, those in sheltered areas (even against a wall or under a desk) do have a better chance of surviving. And that fact is still true today. Of course, with the number and size of nuclear weapons today, one cannot be exactly sure what kind of world one might survive in.

Well, of course they require something, whether it is is a simple keyboard like some rigs, a computer like others, to toggle the FSK input or a full-blown TNC like most of the digital compatible rigs.

I never thought to say that because I felt it was stating the obvious that a digital mode required some sort of digital I/O. Perhaps it was not obvious to everyone. I will gladly correct my oversight.

Can I presume that you will always add that a CW compatible rig requires the use of an external key, keyer or computer to send CW and that a voice compatible rig, with the exception of most HTs, requires an external microphone? That would put the requirement to state the obvious equally on both of us.

In what way is dying on the interstate far fetched? From the statistics I recall, there are tens of thousands of such deaths in the US every year. I am sure someone somewhere got run over in a parking lot, but I don't recall that appearing on the local news.

You didn't answer the question, Cecil.

I can imagine all sorts of situations at high speed where jamming on the brakes could result in a fatality, if they are applied so hard that the car starts "fishtailing".

It would be intersting to hear the reasons behind that belief, Kim. Personally, I recommended 5 wpm General and closing down the Novice and Tech Plus to new licenses.
>
>As I recall, the "older/longer" licensed hams would come in to the
>conversation with comments about how we were "lite" hams, hams who did not

>etc.

That's terrible. How could they know what people would eventually do?

I remember back in 1967, when I first got my license, how some other hams said it "wasn't a real license" (no 'phone privileges in a 1967 Novice) and my setup

"wasn't a real rig" (it didn't cost nearly enough money). Didn't bother me - I
was having too much fun.

>
>What I do get upset about is being judged by any other ham, or person for
>that matter, to be greater or lesser than they just because I got somewhere
>differently than they did.

Thanks for making that clear, Kim. Some of your comments in the past may have been misinterpreted.

> Do we not deserve the freedom we have in this
>country because we did not "work for it" the way our forefathers did? Are
>we lesser beings because we have not "worked for the right" to be humans the
>way our ancestors did? No.

Agreed. Basic human rights are due to everyone.

>Am I a lesser ham because I did not pass a
>higher speed CW test than someone else? No.
> And it would be silly to base
>someone's worthiness to be a ham on just one of many, many modes that are
>available in our hobby. There are even those hams who really don't even
>operate on the air all that much at all--but they sure have helped in other
>ways such as experimentation, politics, new equipment, etc.

What it really comes down to is "level of demonstrated accomplishment". The license is a privilege, not a right. Your analogy doesn't work because of that fact.

The situation is somewhat like the following:

Since the 1920s, a marathon has been defined as a footrace of 26.22 miles (26 miles, 385 yards). Running one at any reasonable speed is a major athletic accomplishment. Earning the title "marathoner" or "marathon runner" is not easy, and is respected by practically all runners and athletes.

Now suppose the folks who decide such things thought it would be a good idea to reduce the marathon distance to, say, 10 miles. Lots more people would run marathons if that were done, and they could call themselves "marathon runners" honestly. But would it be the same accomplishment? No. That's the real source of a lot of the animosity.

Here in EPA there was and is no animosity of the type you describe. At least not that I hear on the air or see at ham gatherings. What's a "real ham"? Simple - anybody who has a license (any class), plays by the rules, and doesn't mess up other people's legal fun.

--

Of course the FCC has made its ruling, and they are telling us in no uncertain terms that we should not bother them with details. The debate is over and done, and all that's keeping 5 wpm alive is the treaty requirement. Written tests are simplified from what they were because the FCC doesn't see the need for much of that, either. After all, most of the violations in the ARS these days are not of a technical nature.

Seems pretty clear to me.

Steve:

Right. Especially those who misuse the English language. You have
just said "Many herein may be (accustomed) to understand the thread."
Is that what you really meant? Or did you *want* to say "Many herein

may be (left *wanting*) to understand the thread?"

"Wont" means to be accustomed to or familiar with something. "Want" means a need or deficit. The two are not interchangeable.

Ed:

I apologize in advance to Dick for speaking in his behalf without his knowledge, but we have never said any such thing. What we have stated is that before the "usefulness" and "fun" of Morse code becomes apparent to the user, a significant amount of time and effort must be expended in learning how to use it at a practical proficiency level. Our intent is not to be anything like "code-killer." It is merely to be objective and realistic.

Ed:

Sorry, no cigar -- or lobster, in this case. I figured for sure you'd say
you would choose a voice mode first.

>Now, I imagine that hams who had a choice of mode would try a voice mode
>first.

Hmmm. I think perhaps I should give you a conditional "win" now, but
the question was what *you* would do, so I'll not gratuitously double
my lobster debt to you at this time!

BTW I sent a posting earlier today saying you hadn't yet answered
the question, but just now found this after doing a more thorough
search. Thank you for your patience.

Phil:

My personal image of something called a "Combat Defense Force" would be rough, tough, highly-trained SOLDIERS (you know -- someone trained out in the mud, the rain, the cold, the sweltering heat, etc., not some Airman given an occasional 1-week bivouac under "field" conditions) wearing combat fatigues (or, these days, BDU's) and armed with a selective-fire assault rifle, a "combat-tuned" M1911A1 .45 ACP semi-auto pistol strictly as a defensive sidearm, and plenty of ammo for each. Any sissy-boy wearing a blue beret, a white-gripped, chromed anything, and the "whole bit" is just window dressing. The Air Force, particularly during the Cold War era, was famous for smartly-dressed Security Police who could generally be swept aside by a small force of grandmothers carrying brooms. Air Force installations should have been guarded and defended by Army Rangers or U.S. Marines -- the guys who specialize in ground combat. The Air Force Security Police should have stuck to checking I.D.'s at the gate and handing out speeding tickets in base housing areas.

For the record, I absolutely DO NOT approve of the use of transmitters that falsely trigger radar detectors, for the simple reason that it is, in fact, a safety hazard due to the reaction of the speeding driver. I much prefer sound, effective enforcement of speed and reckless/aggressive driving laws. Anyone who triggers radar detectors is fully responsible for whatever negative consequences result from his actions. You must ask yourself before doing something like that -- "Do I really want to kill someone just because he is speeding with a radar detector?"

People who speed using radar detectors are committing a criminal act which compromises the safety of their fellow motorists. We don't need self-appointed vigilantes or goofball pranksters on the road making a bad situation worse.

> 5 wpm code tests are too easy."

It got much worse around here. About six years ago, a local ham radio club in this area (near, but not in, Myrtle Beach, SC) flatly refused to offer the Technician exam. They continued to offer exam sessions, but those wanting to take the Technician exam were told that it was not available, but they could take the exam for a another license (at which point they were lectured about the benefits of code and encouraged to study it).

After a number of complaints, and a big fight with someone at ARRL (I'm not sure of the details), the club simply stopped offering exam sessions. Since the Myrtle Beach club also greatly reduced their exam sessions at about the same time, people in the area who wanted to take the exam sessions had to drive across the state line to Wilmington (about 70 miles North of Myrtle Beach).

This situation continued for a couple of years until the Myrtle Beach club increased the frequency of their exam sessions. And, as I understand it, the first club is now offering exam sessions again.

Sadly, while this situation is extreme and hopefully rare, it is not my only example of an anti-Technician attitude at an exam session. When my wife took her exam in Indianapolis (IN), she was visibly proud when she passed. However, instead of congratulating her success, the guy who handed my wife the completion certificate downplayed the Technician license, urged her not to get too interested in VHF because she would probably upgrade soon, and flatly told my wife the "real fun" of Amateur Radio was on the HF bands where the people were more "friendly" and just a "better class of people" all around. Instead of causing a scene by arguing with this clown, we left and spent the next hour talking about what she gotten herself into when she passed that Technician exam. Luckily, other than an incident when she first went on the air with her new license, I have been able to shield her from this nonsense (I urge her not to participate in this newsgroup, for example).

In this area, I personally know 99 percent of the "freebanders," and I can state with a high level of certainty that none of them are licensed hams because I also know 99 percent of the ham operators in this area. And I see no reason why this trend would be greatly different in other parts of the country. In other words, based on this sampling, it is safe to assume that no more than a tiny percentage of the "freebanders" nation-wide are licensed hams.

There may have been a few higher priority targets than SAC (in those days) but not many. We were still in the airplane and glorified V-2 era. One of the very real problems was that while a bomb might blow a 5 mile hole in the ground and the guidance systems of the era might get it to 2 miles of intention, we honestly did not know where Moscow was closer than about 20 miles; it took the satellites to do that and I had just started hi school when Sputnik went up and the Cape was known as Malfunction Junction. So virtually any attack would have had to have been multiple bombs. Most of Eastern Nebraska would have been left to the cockroaches.
This is one reason the missles in Cuba (or Turkey) were the big deal they were; not only did you lose warning, they might actually have hit something.

You didn't tell Harry Burke much of nothing.

One of the early cruise missles did navigation by the stars, believe it or not. Called a Snark. It almost worked.

When my wife took her exam in Indianapolis (IN), she was visibly proud when she passed. However, instead of congratulating her success, the guy who handed my wife the completion certificate downplayed the Technician license, urged her not to get too interested in VHF because she would probably upgrade soon, and flatly told my wife the "real fun" of Amateur Radio was on the HF bands where the people were more "friendly" and just a "better class of people" all around. Instead of causing a scene by arguing with this clown, we left and spent the next hour talking about what she gotten herself into when she passed that Technician exam. Luckily, other than an incident when she first went on the air with her new license, I have been able to shield her from this nonsense (I urge her not to participate in this newsgroup, for example).
>
>
> Dwight Stewart (W5NET)

And nonsense it be. But I would remind you that mountains look different after they have been climbed. As an ex-VE I had some real ethical problems giving Tech tickets and have lived to see my reservations come to pass. There is a time and place to express those reservations and I quite agree that an exam session is neither the time nor place.

Organizationally, the Tech in the days of 5-13-20 were a major pain in the buns to administer. I was fortunate in having Advanced VEs who could do it more or less as a separate session which solved my ethical problems (and I was/am far from the only one) and the logistics at the same time.

The ethical problem was simple. For reasons I have elaborated on here, the Codeless Tech as a bread-and-milk license was needed and necessary although there are simpler ways to skin that cat. Where I got off the trolley was when it was sold as an 'entry-level' Amateur license which it most certainly is and was not. Regardless of one's feelings, Morse is and most certainly was a requirement in 1991. Selling it as entry level was a fraud, making the first step trivial while making the next one a lulu. I did not like participating in a bait-and-switch.

As could be expected, the switchees did not advance in the hobby but then neither did the coded version dating from the 50s; the present situation was quite predictable. So after the newly-coined Tech came to the club, the OTs could either continue the pretense to no one's benefit or haul out the prod and speak truth; no CW, no laundry. In this particular no-win situation, I found it best to deliver truth as kindly as possible but even Dr. Welby had a problem telling someone he was going to die.

So the seeds for conflict were sown. There was and are status games being played and it is indeed difficult for those who have not climbed the mountain to see the view from the other side; so as a practical matter the gentle prod and the status game, understandably, became one and the same to the Techs involved. To the guy who was just sold the Brooklyn Bridge, it makes little difference if the crowd is laughing or just trying to tell him he was robbed.

The march of time may well end the war. It will not be the same Amateur Service I joined but then it isn't the first revolution we have survived. I have often had a soft spot, although we certainly do not agree on theology, for the priests who joined the Church in the days of Bing Crosby and Barry Fitzgerald and he ain't heavy Father he's my brother and have lived thru John XXIII and all that ensued.

I cannot agree with what you have encountered but I sure as hell understand it.

Dick N�BK

Back when I was a kid, Larry, it was survival of the fittest, something
you youngsters wouldn't understand.

Why would a lawbreaker go to the trouble of obtaining a ham license
only to keep breaking the law? That makes no sense whatsoever.

80 characters corresponded to 640 horizontal pixels. We now have a
lot more pixels. Netscape doesn't have a problem with long lines.

Tens of thousands of deaths due to radar detectors? They should be outlawed.

Yes, I can imagine people fishtailing when they see a UFO descending upon them.
Exactly how many people have been killed because their radar detector beeped?

When I had one of those things, it went off every three minutes, but I am still alive.

What if the "prankster" was a radar cop?

My radar detector used to go off when I passed under high-power lines.
Do you advocate outlawing high-power lines?

Okay, you're talking about things a little bit before my time. I had just entered grade school when Sputnik did its thing. However, I do remember that my father went through the roof over it (he was in the Air Force at the time doing something in electronics at radar and radio listening facilities - never did figure out exactly what he did).

They seemed to be messing with all kinds of ideas back then. I read they were also working on one designed to home in on radio broadcasts. That almost worked also. However, I don't think it ever got beyond the testing stage (probably because it was too easily defeated).

You are a newbie, my son. At one point in the game, all radio stations had to have CONELRAD alarms and cease transmitting instantly if all of the AM stations in the US suddenly switched to 640 and 1240 in the event of a national emergency and took up switching among them to confuse incoming bombers homed in on your local rock station. Some of the Amateur accommodations to this regulation gave lash-ups a bad name.

Well, I'm glad to see that we at least agree on the fact that the exam session is no place for such nonsense. Again, I want to stress the incidents I described are rare (I've been to other exam sessions and, in each case, the examiners were nothing but polite and friendly).

> [snip] Where I got off the trolley was

The problem I see with that is that you seem certain the only path to take in Amateur Radio is to advance up the license classes. However, I don't necessarily see it that way. Many General class operators, for example, have no desire to go beyond that particular license class (some have been in that class for decades). Likewise, for me, I see no reason at this point to go beyond the Technician license. I got into radio to tinker with electronics and the Technician license offers all I'm seeking in that regard at the moment. I probably will one day take the exam for a another license class, but I strongly suspect that I will rarely use the privileges offered there.

Take care, Dick.

Properly formatted text is a joy to read, improperly formatted it is torture. It is not a question of the capability of the text editor or the news reader, but of the ability of the human eye and mind to follow a line of text to the end and to absorb the information therein contained. Formatting is just as important as grammar and spelling. Some suggestions:

1. Eighty characters wide is the absolute limit for reader-friendly text. 64 characters wide is better.

2. Separate paragraphs with a space.

3. Avoid use of HTML. It only tempts you to use fancy fonts and such, and adds unnecessarily to bandwidth. If you must, use monospaced fonts and observe other rules.

>Leaving out the ARRL part, that is exactly what Cross said in his >speech.

Which piques my wonder as to why he felt it necessary to make the comments he did. And WHY have they demonstrated a greater reluctance to put more "teeth" into the programs...?!?!

>Cross said that if he were asked to make a decision about that, not >everyone in the Amateur Radio Service would like that decision.

And it's at that point my concern arises. Of course, since his comments were simply transcriptsof his comments, and not a live delivery, one can take it many ways.

>Would you prefer that FCC staff never give anyone a heads up
>on these sorts of things?

What I would prefer is a staffer that said "I am from the FCC...How can I help you?", NOT "Take care of business or I will make the decisions for you".

I am sure it does. But "chain of command" in a federal agency does not necessarily mean that because I was hired by "John Q. Staffer" to work at the FCC, who WAS "appointed" by Congress, that >>I<< am appointed by Congress.

Cecil:

As a kid who had to fight his way through the first two years of high
school, I fully understand the concept of "survival of the fittest."  Howver,
I don't recall anyone ever trying to use deadly force against me -- such
as giving me a live electrical wire to grab onto.  I would certainly have
taken that much more seriously than any of the normal struggles
one endures during one's youth.

Ed:

Correct.  We only abuse people who whine about code testing
requirements, past and present, *regardless* of their license class!
Mrs. Stewart is perfectly welcome in here, and won't be abused, as
long as she doesn't whine!
```

Speaking for myself, I never ask what anyone's license class is --
so I wouldn't have been aware of her being a Technician until
Dwight mentioned it.

Ed:

I wonder where you were brought up? In the little suburban enclave
where I was raised, we kids did a lot of "harm" to each other, and I don't
recall anyone ever being arrested! Thinking back on how I suffered at
the hands of bullies during my early school years, perhaps I should have
had some of them arrested, but I choose to get even instead! That was
a lot more satisfying!

Ed:

No, it wasn't rigged. I made up my mind that if you said you'd choose a voice mode first, you would have won and I'd owe you another lobster dinner. I was pretty certain you'd come out on the side of the no-coders here, just for the sake of political correctness. I was, in fact, pleased to see you say you'd choose CW first, but that wasn't the "winning" answer as far as the bet went. When you later stated that most hams would probably choose a voice mode, I was willing to give you the win on that, but the bet was about what *you* would do.

>Do you advocate outlawing high-power lines?

Cecil:

No, I generally don't approve of outlawing anything, including radar
detectors.  However, I think anyone caught speeding with one in his
possession should receive a higher penalty in terms of fines/points.
High-voltage power lines are a simple modern necessity, a fact which is
obviously beyond your grasp.  That is something I can't help you with.

>
>What if the "prankster" was a radar cop?

Cecil:

Don't look now, but traffic cops don't use their radar guns as a "prank."
They do so with legal authority.  Any driver using a radar detector who
gets a warning, then brakes hard enough to fishtail, deserves to be
ticketed for speeding and reckless driving -- assuming he doesn't cause
an accident in the process.  The activation of his radar detector by
the police radar is not a deliberately dangerous act on the part of the
police officer, but the results of using a radar detector are the full
responsibility of the driver who uses one.

Ed:

That's right, but the only people who are going to be protected by fire sprinklers are those who have sprinkler systems installed in their homes and businesses. You stated that there more fires in the U.S. than there "have been occurrences of emergency communications that were conducted on CW by necessity." I happen to agree. However, if memory serves me right, there is no federal law requiring fire sprinkler systems to be installed in each and every private home. Public residences must not have been covered by any such requirement up to the year 1987, because that's when my apartment building was built, and it does not have them! Three years ago, the apartment building adjacent to mine was burned to the ground when a 77-year old woman drove her car into a bank of gas meters and opened up the gas main. Fortunately, an alert member of the maintenence staff evacuated the building in time, but a sprinkler system would have prevented the total loss of the building and the property within.

My argument was against the statement that SSB is not a useful emergency communications method at 200 wpm. It certainly is at Intel because it has been engineered to be effective. Nothing else said or implied.

However, I do have a 12vdc tape recorder set up beside my emergency ham gear - all backed up by batteries charged by solar power.

Larry, you are just going to have to decide if setting off a radar detector on an Interstate is a dangerous thing or not. Is it a dangerous thing? If so, it's dangerous for the cops to do it.

So that's why you bully the no-coders.

 Tell ya what, Ed- Next time you pass a magazine stand pick up a copy of
Popular Communications magazine and bring yourself up to date. There is
even columnists, licensed hams, who write about the ongoing activities
of ham/freebanders in language couched to avoid direct responsibility
but which leaves it very clear what is happening.

You and Jackass Moore can avoid it as you wish, you only come across as
fools on a fools mission. Of course Moors "talks to those guys" anyway.
You came from Cb, do you?

People killed by grabbing 110vac while standing on a wooden floor is
an extremely rare event, Larry. I must have gotten onto 110vac
hundreds of times in my life (AC/DC radios) and I'm still alive.
I forget what the threshold voltage is where the average person
cannot turn loose of it but it is higher than 110vac.

And therein lies the entire rub- the root of the problem. For the
switchees who did not advance in the hobby soo n began demanding their
advance be handed to them as the original "entry level" had been. Time
for the battle to be joined.

the present situation was

> Service I joined but then it isn't the first revolution we have survived.

Oh, ther will still be an amateor radio. It will just be unrecognizable to anyone who has been seriously involved for the long haul. That would seem to exclude many longterm licensees, including many in Newington, who have held licenses and been marginally involved, say almost never on the air at least in anything more than a very narrowly defined way. Things change, always have. But such a gigantic shift is unwarranted, unnecessary for any realistic reason other than to load up the ARS with people so marginally imnterested in the technique of radio as to dilute it down to water. At which point it can very easily be sunk out of sight.

How much you wanna bet this dufus starts chanting somehting like "well those
signals are passing through my body so I got a constitutional right to know what
they're saying", or "if they want privacy they should use landlines".

Neither does anyone else, but you have noticed, of coursxe that they
always manage to note their Technicianness so that they laythe
groudnwork for a really good whine and lament of how they've been
abuses, and of course Ed and the Newington set take it up and carry on.
Wouldn't want their sensitivities , already provemn to be fragile in the
extreme by their 'hazing rituyal' attitudes toward ANY sort of a Morse
code exam, to be further infringed such that we might never convince
them to sign up for a membership. ARRL? What's that?

There are more people electrocuted by common household 120VAC than any other source. It is NOT even close to being trivial nor safe. You are lucky, as I am also.

I worked on RF hardware and software design of spread spectrum phones. The US government would have a serverly hard time decoding a spread spectrum signal phone (its easier to just tap the line...hehehe). The base unit passes the handset a "seed" this seed corresponds to a psuedo-random high speed code on which the multichipped audio stream is EX-OR'ed with. Also there are control signals passed back and forth between base and handset....not to mention channel selection...etc. Sounds complicated yet?.....well there is more.....Your receiver archetecture only takes care of the physical radio demodulation......there is the software layer that is the BIG unknown, that layer takes care of EVERYTHING, if you have no clue how or what it does you will be spinning your wheels for years.

Best Regards,
MacGmaN

>young age without much (overt) effort.

Hey Bert,

Let me know what time and frequency (channel) and I'll be glad to hop on with you guys. (Of course, ony if that's ok with you guys?) I went into Manhattan yesterday and grabbed an MFJ practice oscillator. I see it's got an output jack for an earplug. I'd imagine, I'll try wiring the "hot" lead to the audio pin of the mic plug and the key contacts to the x-mit and ground pins. I'll experiment with an old rig I've got lying around.

Perhaps this may be a silly question but electronic theory is not exactly my strongest suit, although I'm no slouch either...does a diode(s) (electronic check valve, yes?) need to be on the wire(s) connecting the key contacts to the x-mit circuit of the radio? Isn't there "juice" in both circuits so wouldn't you just want the key contacts to complete the x-mit circuit without introducing any additional voltage? I'm guessing you're on 27.1250mHz so either 4 or 12 watts should be just fine between Northern NJ and Long Island, NY. Good luck and thanks for any answers. The "electronics" query above is open to any takers, thanks again. Take care and 73.

Yeah, damned changing of times anyway, eh? My mate and I were sitting around the water pond the other night and looked into it. It was as though a mirror and we both saw the same future: a time when our descendants would have it easy with grocery stores, cars, schools, and organized religion. We both looked away from that tragic truth and shook our heads slowly as we realized there was just not much sense in going on--what with our children's children having life so easy in the future. We knew we were more human than they'd ever be. . . and that their human-ess was far from recognizable to us.

Dick, having been in LE for your career you should know that one does not preserve his sanity and perspective hanging around with a bunch of cops. Nurses need to remember the entire world is not sick or scared shitless, claim adustors need to get out of the idea that everyone they meet is a crooked chisler. And so it goes.

We see the ones looking for some righteous activity to avoid code practice; you, your children, and grandchildren can be really inventive that way when it comes to homework. One of the trade hazards of rrap is encountering only techs with major head or emotional problems, usually one hopes temporary, over what is viewed as real tedium.

Like you, I am frigging tired of hearing it and tend to come down hard with the size 13s but one cannot totally lose perspective. Hell, they are even sending Ed to plant the flag in beautiful So Sioux City, NE where he will be encouraged to find that his counterparts are making great progress supressing odors from pig farms -- a spurious emission if there ever was one. It will definitely broaden his outlook and help retain perspective and sanity.

You been hanging on rrap too long, Richard.

Your petty insults demean you, Dick, not me. I guess there are some things that cannot be tested for...

If you can tell me how a digital mode can operate without a digital I/O device, I will accept the title you have so uncerimoniously bestowed upon me. If not, you are welcome to keep the title for yourself.

This has degraded to the point of ridiculousness. Perhaps it is time to move on.

>fools on a fools mission. Of course Moors "talks to those guys" anyway.
>You came from Cb, do you?

Another petty insult, eh? Pitiful, in my mind where a supposedly grown man
can't engage in civil discourse. What IS ham radio coming to?

And, yes, I did a bit of CB in the mid 60s.

Yes, and, to stick with your analogy, if the government were to make such a requirement, it would equate exactly to the requirement to test hams for Morse code in the event that it is needed.

Do you advocate such governement intervention in all of our lives, or only those parts that result in your getting what you want out of it?

Why did you feel it necessary to say the same thing, in different words?

>And WHY have they demonstrated a greater reluctance to put more
>"teeth" into the programs...?!?!

From the enforcement changes I have seen over the past 3 years, there are a lot more teeth, not less.

>>Cross said that if he were asked to make a decision about that, not
>>everyone
>in the Amateur Radio Service would like that decision.

>   And it's at that point my concern arises. Of course, since his comments
>were simply transcriptsof his comments, and not a live delivery, one can take
>it many ways.

Apparently one can. I never would have thought of the way you are taking it.

>>Would you prefer that FCC staff never give anyone a heads up
>>on these sorts of things?

>   What I would prefer is a staffer that said "I am from the FCC...How can I
>help you?", NOT "Take care of business or I will make the decisions for you".

If the decisions need to be made and the Amateur Radio Service cannot decide it for itself, what choice would the FCC have? I think Cross told us just how we can, and should, help ourselves. Do you disagree with him, or do you just not like the attitude you presumed from reading his transcribed speech?

And I agree with him wholeheartedly; such decisions imposed on the Amateur Radio Service would not be acceptable to many.

Hmmm, can we put another lobster on the results of a news-archive search? Now that I have been chided, I am chomping at the bit for a good opportunity to foist someone on their own petard. :-)

Dick, the US Army is unrecognizable to anyone who has been seriously
involved for the long haul. Automobiles are unrecognizable to anyone
who has been seriously involved for the long haul. Physics is
unrecognizable to anyone who has been seriously involved for the
long haul. Football is unrecognizable to anyone who has been seriously
involved for the long haul. Airplanes are unrecognizable to anyone who
has been seriously involved for the long haul. Why are you so dead set
against evolution in the ARS?

Assuming "Moors" is me and not the place in England where my ancestors
came from: I was on 27 MHz for the very last ARS 11m contest, the one
that was supposed to save 11m for hams.

My parents and I use CB for communicationing between our houses when
I am online. My parents are not hams. Yep, I talk to those guys.
What's it to you?

Message-ID: <20010528145855.19811.00001191@ng-mb1.aol.com>
Xref: archiver1.google.com rec.radio.amateur.policy:22601

Well, Larry, after being chided to sharpen my computer-search skills, I decided to take you up on your suggestion. So, I did a search on "mode," "lobster" and "K3LT." Lo and behold, I found the following:

> K3LT: Let's assume the guy in question is you, with your present
> CW skills. Which do you grab for first? The key or the mike? I've
> already made up my mind what your answer is going to be, but
> play along with me anyway. If I guess wrong, I'll tell you, and I'll
> owe you a second lobster dinner.

I then answered:

> W1RFI: In my case, the answer is very easy. The only mode I would be
> apt to have with me would be CW because I not keep my HT charged or
> even own a working microphone. I certainly wouldn't have any mode
> with me except for CW if I were in that situation.

>Do I get the 2nd lobster, or not?

You replied:

> K3LT: Sorry, no cigar -- or lobster, in this case. I figured for
> sure you'd say you would choose a voice mode first.

Now, it seems to me, Larry, that if your offer was on the condition that if you guessed wrong I would get a lobster, and you figured for sure I would say voice, then you guessed wrong.

I will assume that you had forgotten the wording of your original post, because you don't seem the sort who would not honor such an offer.

Thanks for prodding me to go looking; I never would have thought to do so. :-)

My FSK microcontroller design took me a much shorter time to design and
build than if I had designed and built a Morse code key. (I'm not very
mechanical)

Go do that, Ed, and in the words of the biggest whiners on the newsgroup,
"Don't let the door hit you in the ass on the way out."

Normalizing all the variables, exactly the same. Both are equally available.

>Then how come all those HTs with MCW buttons got FCC approval?

Because, as you very well know, those HTs don't fall under Part 95 regs; they're Part 15 intentional radiators, something Bert is not using. If you hadn't so severely edited my original post, it would have implied that.

You have a unique editing skill in which you're able to take a person's comment completely out of context and make it appear they've implied something they didn't intend to. But I must ask, what's the point of doing this?

Was a keyboard and PC included in the box? If not, you can't do RTTY "out of the box." You need to add the peripherals.

You need to add the peripherals to operate CW, Jeff. So what? You can't

do CW "out of the box" either. I can buy six keyboards for the price
of my Bencher straight key.

There's no point, Jeff, it's just style. I read until I find you in
a error and then I stop reading and reply. Everything past an error
is irrelevant.

>OK, prof???

Gotcha! The exponent of 2 is applied only to 4, not -4; you misinterpreted it as (-4)^2. What I wrote was really -1*4^2 (recall that -4 really means -1*4); remember, exponent first, then multiplication. Writing it without the exponent we'd get -1 times 4 times 4 which is -16:

-4^2 = -16 while (-4)^2 = 16; see the distinction?

Now go have a beer as your punishment!

Oh, now your tape recorder is a "dictation system which includes
secretaries." Were the secretaries on-call 24/7? It seems quite
odd that Intel would base the foundation of their emergency
communication system on the fragility of secretaries and tape
recorders.

>Where the heck have you been all this century?

This century? Intel's Third Millennium Emergency Communication
System is based on secretaries and tape recorders? Yikes!

KH6O

P.S. How's my editing skills, Cec? I'm using you as my role model...

Why do you believe that the governments of the world initiated a Morse-code test for Amateur Radio back when it was started? Why do you believe they continued it throughout the years?

I certainly can. When the function switch on all my transmitters is in the TUNE mode, a carrier is emitted; by turning that switch between TUNE and STANDBY I can send a Morse-encoded transmission.

Under that standard, the only mode that is commonly available "right out of the box" is phone.

OK, Jeff, you're on. Exactly how many times have you sent CW that way?
It must be quite a challenge to send CW with a push-on/push-off button.

The "error" appears only when you edit out certain key words.
For example, suppose you wrote: "I never said that I am in
favor of code testing," and I then do a follow-up applying your
editing "style":

Cecil wrote:
>I am in favor of code testing.

I've not only wasted my time but yours, also, for now you'll
have to write a follow-up to defend your remarks.

As I just told Cecil, by switching between TUNE and STANDBY, I
certainly can key my transmitters in such a way as to send Morse-
encoded transmissions. Not practical, but certainly possible!

My (former) condo apartment building in a San Francisco suburb was
built in 1985 and had sprinkler systems and smoke alarms installed
because they were required. Whether they were installed properly is
another thread.....

Yeah, but when most people read formal messages, they don't add very many "uhs"
as pauses. I presumed that when that was introduced to the thread, we were
talking conversationally.

Yes, but some of the rigs being sold include a microphone. All HTs have one
built in.

>both of you are.

You are right, they are not different. I can build a TNC but I am not capable of building a reliable mechnical key. A used TNC can be purchased for about $10.00 -- the used keys I saw at Dayton were considerably more expensive.

First try:

Nope -- incorrect. Numbers have nothing to do with bandwidths -- and dumbed-down "newcomers" don't DESERVE to be welcomed with open arms just because they whined and pleaded to have HF phone privileges handed to them on a silver platter. I'm hoping that 48 hours from now, the "newcomer bashing" takes on a new and more enthusiastic approach; truly crushing the spirit of any further "newcomers" to the HF phone bands. I also hope that large numbers of presently licensed General, Advanced, and Extra-class licensees throw away their VE badges and refuse to give the 5 WPM General/Extra tests. I didn't feel this way until I read your posting -- so congratulations for rekindling my enthusiasm for bashing the no-coders!

Well, that is real big of you to welcome my wife into this newsgroup under your terms. I'm sure she would be willing to obediently follow your demands to the letter. However, I hope you'll forgive me when I continue to urge her to stay out of this newsgroup instead.

As for the whining nonsense, according to you, everyone who has an opinion about code testing that is different than yours is whining and deserves to be abused. In reality, your goal is to use insults, ridicule, and harassment, to stifle the expression of any opinion that is different than your own. People who have no real defense of their own position often use this tactic.

P.S - I see several messages have been posted that are not showing up on my server (the one you replied to is an example). My news server is having fits at the moment, and is not showing all of the messages posted. They insist the problem will be fixed shortly. Until then, I hope those individuals who post messages I don't see will accept my apology for not responding.

I may not be Larry, but I can tell you that the above MUST be wrong.

Cordless phones that operate on 33cm (900MHz) and 12cm (2.4GHz) CANNOT be protected because there are licensed services (including amateur) that are allocated those frequency bands. Not only that, but as part 15 implies, we (as amateurs) have a specific duty to listen to ANY device on those bands when interference with our own equipment (when we operate there) is concerned; the duty being to identify the source of the interference.

The only phones that can be protected are the 49MHz phones - and only because they are NOT in a frequency band that is also allocated to another service. Their frequencies are exclusively their own.

Here's a nice one. Even comes with a separate code key. I received the
Sears unit, it's Part 95 type accepted, not Part 15. Pretty cool, eh?

You mean 40 years ago they had rifles that can see and shoot around
corners? Why didn't they use them in Korea and Viet Nam?

What do you mean "still", Dick. Nobody knew that for hundreds of

thousands of years. That equation is a 20th century equation, you know,
a *CHANGE* from the 19th century?

According to your Tarot cards? Still working on your pie-in-the-sky-is-falling theory?

I don't think you are capable of stopping your whining, Larry, but
I will call your bluff. I will not whine anymore about your whining
and I will point out the next time you whine.

Every religious zealot needs to demonize some group. Do you believe that
CBers are going to hell, Dick, and hams going to heaven?

Dick hopes and prays that the ARS is "coming to CB", Ed.
Otherwise, he would be proven absolutely wrong.

That's not even the same thing unless your microphone had a
push-on/push-off button. As usual, you missed the entire point.

Egads, that's even worse. Please demonstrate your rotary switch Morse code technique for me, Jeff. How long before it breaks and you're SOL?

For me, a TNC is duck soup compared to a well-designed Morse code key.

'Course I'm a microcontroller jock.

The reason that you are a fool for using that rotary switch to
send CW is that any sane person would use the PTT switch on the
microphone in either AM or FM mode.

If I had not used a calculator, my work would have been late, filled
with mistakes, and I would have been fired.

Ed, did you realize that your newsreader is messing up the attributions?

 Name at the top of "The Ham Column" on the issue before me is "Kirk
Kleinschmidt NT0Z, American Radio Relay League HQ"
 This is an old magazine,so I don't know I am not a subscriber but a
friend gave me a stack of past issues.

 The issue I am looking at is May 1994. I'll have to dig up the later
one with the ham/freebander's bitch column in it and quote some of it
for you. Naw, find it for yourself, you'd just say I was dreaming it up.

> My basic "disconnect" is that I can't get any grip on what is really driving this whole thrust to move into digital ham comms. I'm missing a clear explanation that makes sense from both the improvement in operations and regulatory perspectives just what we would get out of "going digital".
> >
> Because it's more "modern"? Because everybody else is doing it so we gotta do it too? To promote experimentation? Because the FCC sez so? Why do they say so? If no then just what IS the big deal? I don't get it.

Let me take a stab at answering that question. Once any kind of information is in a digital format it can be manipulated by a computer. I believe you have a EE degree so the following should make sense to you. I was told many years ago that electronics was basically mathematics in a physical form, and for the most part I think that statement is true.

With the exception of interacting with a human, other mechanical devices, or generation of RF power for the purpose of information transmission, everything else in a modern transceiver is nothing but signal (information) processing. From basic electronics to circuit analysis we use mathematics to design the filters, mixers, compressors, detectors, modulation methods, etc. From the mathematics we "try" to build physical circuits to perform the desired mathematical operations in an analog form. So the end process of the design is nothing more than an special "analog computer" built to solve the mathematics. Too often the "analog computer" that does get built has many undesirable characteristics, which requires someone with experience to adjust the component parameters for best results.

The natural question that arises is why waste the effort to build the special communication analog computer in the first place? The answer up until some years ago was simple. The computers to directly implement the desired mathematics was not fast enough. Today the picture is different with DSP processors that can perform over a billion operations per second are off the shelf items. Now as the economics allows, the old analog computational elements are being replaced with digital elements that solves the mathematics exactly, and without the nasty nonlinear behavior of the old analog computational components. We can't forget that the limitations of the "analog computing components" are a source of performance compromise, i.e they only approximately implement the mathematics we need.

So in the end the radios we use are really doing nothing more than processing information per some predefined mathematical formula. When the mathematics (formula) changes the old analog computer had to change, i.e. hack up the circuits or buy a new one. The emerging "software defined radio" replaces the "hard programming" in the old communication analog computer design with software. When changes are required instead of "modifying" an old analog design by cutting up the circuit the "software defined radio" simply impresses the new mathematics on the computer by a simple software update. No complex circuit modifications are needed, and everybody will get the exact same predicable performance too.

The additional benefit we gain with a software defined radio is the ability to operate almost any mode, old or new, with little to no extra investment in special hardware to use that mode. For example you want to operate CW, just load the narrow CW filter and keyer code, or operate any of the H.F. or VHF digital modes by just loading the modem software in to the rig. I think you get the idea. So long as the rig has the DSP CPU horse power they will be like our desk top computers, where what we do with them is defined mostly by the software we load in to them.

My IC-706 doesn't even have a tune switch and some transceivers don't
come with a microphone.

ARE you serious? I can't elieve you said that. A 5 year old can build a
reliabe mechanical key. Doesn't have to be pretty but it sure works.

A used TNC can be purchased for about

> $10.00 -- the used keys I saw at Dayton were considerably more expensive.

Shows you what is in demand doesn't it? :-) And--how do you know the
TNC actually works? Maybe it got ticked by a voltage surge while in
someone's "wellgrounded" shack.

I'm not 5 years old, Dick. I am 63 years old with tremors and arthritis.
Virtually all of my mechanical designs are failures.

  My eyes do.  My monitors and video cards will easily handle
  1280x1024, but the resultant text is far too small for easy reading.

  And I read e-mail and newsgroups with text-mode-display readers,
  not with a graphical browser.

  Federal law, maybe not (yet), but certainly local fire codes have
  required sprinkler systems in private residences for decades under
  certain circumstances.

  A single-family two-story residence built in 1960 that we owned from
  1977-1986 had sprinklers in the garage because although on street
  level, it was below living quarters.

>Do you advocate such governement intervention in all of our lives, or only

  I prefer a concatenation of the two.  I have no problems with the
  FCC staff making professional spectrum management decisions again.
  That's what they/we are/were paid to do and did so in years past.

There is a whole process of comment, input, etc. before an NPRM
results in a R&O, and afterwards there is a whole process of "hey
you did it wrong" both at the Commission and in the Federal Appeals
Courts. (I occasionally teach Federal administrative procedure at law
school seminars.)

What Bill was referring to is requests for what would go into a NPRM
before it is issued. It's his job to write the NPRM (and defend it
from butchery within, as we saw in the restructuring docket).

What he was saying was: if we amateurs can't get together and come
up with a unified front for what changes, regs, etc. we want, he
will do it for us and do you really want him to do it for us? This
is hardly "shut up and do it my way".

The issue of "the FCC isn't interested in issuing detailed
regulations, etc" is mere whitewash to cover the disinterest that
the present crop of "regulators" have for anything that is remoteley
technical or isn't broadcast, cable, or common-carrier related.

These folks were NOT AF Security Police...they were SAC's flight-line and comnmand-post security detail and were very effective in what they did.

Actually, I think you are trying to make the proverbial federal case out of a simple statement...I don't care if Mr. Cross was appointed by Congress or works for a staffing agency. He made comments that to me seem threatening. I don't like that. No more, no less.

I wouldn't think highly of an engineer who can't do the simplest of
calculations w/o having to reach for a calculator. Do you need one
to solve Ed's example: 2x=21 ?

>Your methods may work for teaching

I feel they do, for students who develop the ability to perform
mental calculations seem to also develop deeper insight for
understanding more complex topics the first time they see them,
just like lifting weights leads to the ability to lift heavier
weights.

>but be sure to tell your students, that
>in the real world, they will get fired for such nonsense.

"Nonsense"??? Developing their mental capabilities is nonsense??
I don't understand you at all, Cecil...

Larry, please correct me if I am wrong, but I believe all wireless telephones are 'protected' (note the quotes) by FCC regulations. This means you can't divulge their contents should you pick them up. The exception (and I must confess that I don't know why) are the old 40 something MHz phones. Of course, some people do - cell phone ids are stolen (usually to be used for drug transactions), but you are correct - no one needs to monitor this stuff.

73 from Rochester, NY
Jim
(ps - the spred spectrum cordless phones have moved up - 1.2 and 2.4 GHz, I believe)

I didn't say HI was in the message text. I was laughing.

Hi Mark,

You can generally find us on Sunday mornings at about 7:30 and some evenings during the week between 7:00 and 8:00. You are certainly welcome, as is anybody else who'd like to help us practice. If you're more than 150.3 mi. away, please ID as LI, NY. Just kidding...but I gotcha for a sec, didn't I?:-D

I need to give the oscillator wiring some thought here. I'd wanted to avoid actually modifying the radio (Although my GROL allows me to do so legally as long as I don't alter the transmitter to exceed FCC limits.) itself. I believe the tone generated for the roger beep (which I loathe) in many legal rigs is created by a simple oscillator cicuit. These are in fully Part 95 type accepted, so the mod route is not entirely ruled out. I just lack the spare time to do this but perhaps my reasoning is flawed. If I have time to wire a mic plug to a key and oscilator, I suppose I have time to do the full mod. We'll see.

Thanks Mark, thank you all for making this a fun departure from the "heavy" stuff. I hope everybody had a great memorial day weekend. If any vets are reading this, a special thanks to you.

What state? I am unaware of any state that currently
requires any sprinklers in any single family dwelling.
I know rules are very much localized, but I am curious if there
truly is any new construction of single family homes that
actually mandates sprinklers.

Not on any of my HF rigs. All of them that will work 'phone modes require you to add a microphone, at least.

>
It's not the voltage but the current that causes the "can't let go" response. I don;t recall the exact values, but it's less than 1 amp.

The big factor is body resistance and where the current is flowing. Wet skin has lots less resistance tha dry skin, and hand-to-hand flow is really bad because it's across the chest. Where the pump is.

Switch to Safety.

Did he have a receiver set up to receive possible answers to his CQ? If so, then he could claim it was an amateur operation. If not, it's just blowing smoke.

You previously said he would set it off to see how the other drivers would react. Here's your exact words:

BEGIN QUOTE FROM POST OF 25 MAY 2001:

N2EY wrote:

> detector.

One of my ham friends has a little hand-held transmitter that emits RF in one of the radar bands. To amuse himself, he keys that transmitter when he's tooling down the interstate with his camper and a speeder passes him. He's seen drivers go into fish-tails while slowing down.

END QUOTE

Good luck on this one!

Yup. But they also believe in less axle loading, both on the highway and on the rails.

> As for
>enforcement, they tend to heavily depend on traffic cameras. Again,

I did not know that! Cameras have been used here, too, but to a very limited extent. One use I know of is to document drivers going around lowered railroad crossing gates.
>

>construction (no equipment, no signs, etc).

Amazing. Do they use concrete or asphalt or both?

The main factors in road life are two: Stress (axle loading again) and quality of construction. Wear from heavy axle loading is not a linear function - one study showed that a SINGLE 18 wheel semitrailer rig does as much wear to a typical US road as 7500 (seven thousand five hundred) pickup trucks.

WOW! I had no idea!

I suppose it's not just speed, but a whole raft of concerns. Safety at any
speed, getting the cars to last longer, environmental concerns, and a certain
amount of protectionism for the manufacturers (if you have to buy certain Volvo
parts only from Volvo, it guarantees them a certain amount of revenue no matter
what).

Crazy. On the one hand they are wild for safety, and on the other they drive like maniacs.

>

GREAT story, Dwight. Thanks for sharing it.

Unless I'm mistaken , a lot of what we think of as "Christmas" traditions are really old German/Teutonic/Nordic pagan rituals. The Yule log, the Christmas tree, mistletoe, and some others I can't think of just now. Also several of the days of the week (Tieu's day, Wodin's day, Thor's day, Freya's day).
>

73 de Jim, N2EY

btw, I once posted an explanation of where the term "73" came from. It has been quoted on a few websites, and the other day I found it on a new website - translated into German!

Ham radio is not for everyone. But when it changes so that everyone can
just jump in, it WILL be for everyone. And at that point it is destroyed
as a useful entity - just as CB was.

In the first place such a statement from anyone at the FCC is a total farce, and the evidence is the restructuring. FCC did what THEY wanted without regard for anything said by anyone in the amateur community save a few NCI misfits who cannot by any stretch be considered a "consensus".

Nope. Son in law is a Special Forces M/Sgt. Still looks like it 40
years ago.

Automobiles are unrecognizable to anyone
> who has been seriously involved for the long haul.

Nope. They are vastly improved. Can't say the same for the "new and
improved" ARS.

Physics is
> unrecognizable to anyone who has been seriously involved for the
> long haul.

Nope. E still = MC^2.

Football is unrecognizable to anyone who has been seriously
> involved for the long haul. Airplanes are unrecognizable to anyone who
> has been seriously involved for the long haul.

All those things are vastly improved. Ham radio is improved only in the
technology involved. The personnel problem is exactly the opposite.

Piece of cake. I once made a mobile CW QSO with a transceiver that didn't even have CW mode by ofsetting the carrier balance and keying CW with the PTT on the microphone.

There have been more fires than the number of licensed hams; your logic dictates we do away with mandatory licensing. But you opened yourself up, for you didn't limit your remark above to ham-related emergencies. So again I'll point out that thousands of emergencies were handled by CW over the last century.   KH6O

Again, you insist on "peripherals" as all equal. Just like Ed, you
insist that a TNC and a mechanical key are the same. Whatta joke the
both of you are.

Of course Riley can't issue them citations, they don't use callsigns when doing their dastardly acts. That you expect it to be otherwise is even yet more revealing of your mindset.
>
> If they are not using call signs, how do you know they are hams? I think that those that are throwing the carriers on 14.313 might not even number in the hundreds. The majority of those that have been cited for rules violations on the air have been long-time hams. On what basis do you know that they are also freebanders?
>
> If there is any ignoring going on here, Dick, you seem to be doing most of it..

It would be real tempting to just write you off as a cloistered, clueless fool if one didn't know better. Of course you know, and find it much more expedient to gloss over it. Oh I noticed one of your ARRL staffers writes a colymn for PopComm. Even more connecton to the wonderful world of CB.

Throughout my eight years of testing as a VE I wondered if I was actually helping move the ARS toward CB. Turns out that was exactly what was happening. No wonder so many VE's have quit.

Hansl:

If I had to listen to every signal that passed thru my body, I'd probably
get bored to death!  So, for my own well being, I've developed a healthy
lack of interest in same!  And if these people really want privacy, the
best way would be for them to keep their steenking mouths shut!

Dick:

I, too have had many brief encountes with 120 VAC, and I remember
enough to keep the heck away from it!  And if someone deliberately
handed me a live wire with 120 VAC on it, I wouldn't consider that
a friendly act whatsoever!

Cecil:

My point is that *having* a radar detector is an inherently dangerous thing. They are used for only one purpose -- to permit drivers to deliberately exceed posted speed limits. This is not a rational act. Any driver who owns and uses a radar detector is totally responsible for whatever negative outcomes arise from its use. If a police radar sets it off, the police officer is not responsible if the driver's overreaction causes an accident. THAT is the driver's fault alone. If a prankster with a microwave transmitter sets off a radar detector and the driver overreacts and causes an accident, then the user of the transmitter is morally (and should be legally) responsible for whatever negative outcomes arise from his actions. We have enough problems on the road these days what with road rage, inattentive cell-phone users, and kids with booming speakers driving their cars from an almost fully-reclining position. We don't need vigilantes or pranksters adding to the confusion.

Ed:

If you can find an example of where I've abused someone who didn't provoke me by whining about the code testing requirements, or posting a message seeking some sort of public congratulations for the dubious achievement of having passed an entry-level license test, making some similar remark indicating that he/she is worthy of praise, fame, and fortune for the simple act of getting a ham radio license in their pocket, I'll gladly buy you another lobster. However, one thing that has always bothered me about ham radio is why there seems to be a need to lay out a red carpet and toss rose petals at the feet of anyone who makes some progress with a licensing system which is, in reality, dead easy to master. The only conclusion I can draw is that for some odd reason, ham radio seems to attract a lot of misfits and under-achievers. Perhaps this is why most of our HF bands are in chaos.

Jim:

My personal feeling toward monitoring portable/cell phone QSO's
is that it is, for the most part, horrifically BORING!!! Anyone dedicated
to such a pursuit truly belongs in the "get a life" category!

>(ps - the spred spectrum cordless phones have moved up - 1.2 and 2.4 GHz, I
>believe)

You believe correctly. I still have one of the "old-fashioned" 900 MHz
non-SS cordless phones, but it works fine.

>Do you advocate such governement intervention in all of our lives, or only
>those parts that result in your getting what you want out of it?

Ed:

I advocate the smallest, least intrusive government that is possible. This does not mean that I believe in no government at all, as do some of the anarchist-whacko types like Cecil. I believe that the local, state, and federal governments have certain responsibilities to regulate certain things which create an improvement in the overall common good -- and regulations such as building codes and requirements for safety devices like fire sprinkler systems in public housing structures is a valid part of such regulation. As is/was a requirement for code testing in the ARS.

My support for code testing requirements is not based on any kind of selfish desire. It is based on my judgment that the requirement leads to useful capabilities on the part of radio amateurs -- which would not ordinarily exist in adequate quantities sans the testing requirement.

I advocate the absolute minimum amount of government intervention in our lives. The pre-Restructuring code testing requirement was valid, essential, and reasonable regulation. The very fact that these requirements were achievable by people from all walks of life, including people with severe physical challenges, proves to me that they were worthy of keeping.

They use both - concrete on the heavily used Autobahns near larger cities (plus bridges, etc), and asphalt just about everywhere else.

Okay, lets not get too far over my head. However, that does make me feel better about my wife endlessly running around town. I told her one day that if she didn't plan her shopping better, and cut down on repeating the same route two or three times a day (group all those into one trip), she was going to wear out the road and she would have to pay for the excessive wear. Now all I have to do is worry about is the constantly increasing mileage on her car. :-)

> certain amount of revenue no matter what).

You're probably right about the last part. They do have a fair number of companies selling independent parts for vehicles, but it is not as widespread as here (and not nearly the variety).

> Crazy. On the one hand they are wild for safety,
> and on the other they drive like maniacs.

It is not bad once you get used to the aggressive driving. Like I said before, once you realize that other drivers are going to drive aggressively, it becomes reliably predictable. In that way, it is harder to drive in city traffic here - you simply don't know what that other driver is going to do.

> The police around here are very friendly, too,
> if you treat them with the proper respect.

No, it is slightly different. They are friendly without any conditions applied. I don't know how to describe it, so I'll just let it drop with that.

> GREAT story, Dwight. Thanks for sharing it.

Actually, not such a great story. My wife read it and is now talking about another trip overseas. She always did love christmas there.

Well, something came up that gave me a break from the stuff I have to do, so I did have time to respond more fully up to this point. However, that break is over, and a pile of stuff is waiting, so I had best end with this message. It has been fun talking about all this, Jim. You take care and perhaps we'll run into each other in this newsgroup again.

No problem-we can touch two wires together and key the rig. What are
you gloing to do without a microphone?

A better question is -- How long can he run the tape recorder, an HF transceiver, a TNC, and a computer on a 5-7 Amp gel cell?

Good point, Dick! Hey, Cecil -- Mr. Intel -- where's your steenking digital RAM voice recorder? If yours was larger than a pack of Carltons and capable of recording less than an hour on the available RAM, I'd say you should be sued by Intel for identifying them as your former employer!

Ed:

Wanna bet another lobster that you CAN build a reliable mechanical key? I know plenty of people who have, including yours truly, and I'm certainly no mechanic! I have a friend who builds keys as a hobby -- and has several designs that can be built by anyone with a reasonable selection of hand tools, some common woodworking tools, and much less than $10 worth of materials. Would you like his e-mail address?

Ed:

I'll venture a guess and say it's because they kinda figured that nobody needed to learn how to talk, but they did need to learn the Morse code if they were expected to employ it with reasonable proficiency. And, since it was a primary mode in those days, the need to know the code was pretty important. Am I getting warm?

>
>
> Well, that is real big of you to welcome my wife into this newsgroup
>under your terms.

Dwight:

I'm not doing any such thing, because my invitation isn't required for
your XYL to participate here. I don't set the "terms," either. I merely
read and respond to what others have posted here, as do you and
everyone else. However, I do a lot less whining and take things a lot

less personally than some people in here do -- you come immediately to mind.

> I'm sure she would be willing to obediently follow
>your demands to the letter.

I am not making any "demands" on her or anyone else, and wouldn't dream of such. The only thing your XYL would have to follow as a participant in this newsgroup is her own conscience.

>However, I hope you'll forgive me when I
>continue to urge her to stay out of this newsgroup instead.

My forgiveness is not required, and not offered. I have absolutely nothing to do with the decisions made between you and your XYL, and am the last person in the world who would dare to presume to do so.

> As for the whining nonsense, according to you, everyone who has an
>opinion about code testing that is different than yours is whining and
>deserves to be abused.

Where have I ever said that? It isn't the difference of opinion I object to, it is the manner in which it is expressed. IOW, its not what they (the no-coders) say, its how they say it. I have been personally blamed for everything from ethnic cleansing to global warming to the technological downfall of the ARS by my support of pre-Restructuring code testing standards. How do you justify such personal abuse simply for disagreeing on a license testing program? I have received many orders of magnitude more abuse than I have dished out here and on Fidonet, but nobody is keeping score on the no-coders the way they are on the politically incorrect pro-coders.

>In reality, your goal is to use insults,
>ridicule, and harassment, to stifle the expression of any opinion that
>is different than your own.

Actually, you've got it backwards. I have been battling that exact same thing from my opposition.

>People who have no real defense of their
>own position often use this tactic.

Don't I know it! Otherwise, you wouldn't be doing it NOW!!!

 All that statement was had to be the setup for "we told you so" after
they go ahead and do whatever they want anyway. See the late
restructuring original NPRM, the comments, and the final results for the
```

proof.

"Concensus" among all the real hams and the codefree SEE BEE'ers -cum-nmninal ham radio licensees? That's a real cackler. Digital? Sure,bring it on-if you can find anyone who will do more than lip service on the subject. I look for the FCC to do a drastic VHF/UHF withdrawal of bands and for the 'reason' they will surely use this very concept. It's just the opening salvo.

```

Col Steve announced it again last night. "6.900 UPR *does not* QSL". He said the station is not in existence for a "hobbyist" purpose. (UPR is a genuine clandestine station folks - it's not a hobby-pirate station, so no QSL's)

Steve also said they'll be going to the 5 KW power level

around the 1st or 2nd week in June. They currently
run 800 watts. Operation is also to be on 6.900 mHz USB
exclusive, with the 3 Mhz alternate freq put off until Oct 2001
for propagation reasons.

Steve broadcasts live from 10:00 to 11:00 PM eastern time
on weeknights. He also sometimes calls into the Intellegence
Report program from 9:00 to 10:00 PM - for now on 3.270 Mhz
until June. There is also a related Net on 3.860 (+/- QRM) in the
75 Meter ham band on Monday, Tuesday and Thursday nights
starting at 8:00 PM. Sometimes UPR station Op's cjeck in on 3.860
net although rare at this time.

Keep listening, although I don't agree with much of UPR's
ideology, it is still radio history in the making - the first
genuine Clandestine radio station operating on US Soil in a very
very long time! The links to Ham Radio Nets in anciliarry to the
station are also a first.

Pete

Then as an innovator you must be a failure, excluding your specialty of digital of course. Doesn't take much of anything at all to constitute a good working, reliable CW code key. A strip of most any metal that isn't limp nailed to a board, with another nail as the lower contact will do it in a pinch, especially now that we don't have high voltage on the key.

And in answer to all that, "SO WHAT??" So you choose to turn a radio into a computer when that vastly complicates the process. So now only those with computer science skills will be able to build a ham radio set, and thus no technical knowledge nor skill will be necessary nor required for ham radio licensing. Right.

I thought the FCC was suppsoed to have DF gear that could narrow it down to which chair in the house the operator was sitting in.

I'm not Mr. Intel anymore, Larry. I'm retired and no longer have
access to free chips. If it can't be built out of my aging junk box,
it doesn't get built.

On 29 May 2001 14:34:41 GMT, Dick Carroll says:

> Hey Hans- If you want KH6IA you can get it for $14, no matter where you
> live. (long as someone hasn't already)

Unless you have a mailing address specific to Alaskan, Pacific or Caribbean
areas, you are not be able to obtain call signs where the second prefix letter
is an L, H or P in conjunction with certain call area numbers (eg, KL#??? is
limited to Alaskan addressees only, KH#??? to Pacific Island addressees only,
KP#??? to Caribbean addressees only, etc).

Here are the scenarios under which you could obtain a vacant KH6xx call:
(KH6IA is already re-assigned to someone.)

a) Have a mailing address specific to Hawaii.

.or..

b) You can retrieve KH6xx call under the vanity system >IF< you or a close relative previously held that call (no matter where you live).

.or..

c) You could spoof the system by having a resident let you "borrow" his mailing address on your license application.

Nope, Larry, the question is: How long can I run all that stuff on
an 850 amp deep discharge marine battery being charged by solar power?

So computer science skills are NOT technical knowledge. We all know where you're coming from, Dick.

>
Nobody in this NG including us far-end PCTAs have any interest in
"going back", that's a bunch of crap. We want to retain the code
tests. That has abosolutely nothing to do with any technical issues,
digital modes, etc.
>
> but almost no debates about how to plan
>for the future as the service stands NOW. That's want the FCC wants us to
>do, and we are ignoring the increasingly pointed references to that fact.
>
You have the cart before the horse. There's nothing to plan for. WHAT
digital modes?? How do ya "plan" for modes which don't exist in ham
radio?
>
>So with the above in mind what would be the best use of the available
>spectrum be in light of the various communications modes?
>
This is ridiculous. . . we have a bunch of people in this NG plus the
FCC plus others etc. who keep harping on this digital modes thing. My
basic bitch on all the hot air which gets tossed around on this topic
is that the folk who have the technical capabilities to come up with
new modes are doing nothing *but* talking about it. Until some
technical guru or gurus finally get off their keyboards and into their
soldering irons and get the stuff on the air this whole discussion
about "digitizing" ham radio is a complete waste of bandwidth.
>
You've been hot into this subject for eons LeLand. What have YOU done
to make your mystery modes actually happen?
>
>These
>points are the other half of the restructuring done by the FCC in April of

So they're tapping their feet - so what? The FCC is increasingly
distancing itself from ham radio, their utterances continue to make
less and less sense.

There's another dicey assumption. The guy is not full-service
netwired, all he has is Juno freebie e-mail service. There are people
out there like that, there are also more people out there who don't
have any Internet access than there are people in this country who do
have Internet access. Box. Get out.

>
The marketing I think the ARRL needs to dig into would not be targeted
at people who are already hams, they've already been sold. The much

bigger market are the folk who don't know what ham radio is yet or how
to get into it. Like the CBer I ran into. Selling the ARRL would be a
second step in the process, not the first/only step.
>
>Can you suggest anything more effective? I will pass the ideas along.
>
Asking an engineer about marketing has been demonstrated many times
over to be waste of time. And worse. The ARRL seems to be doing that,
that's why the ARRL needs to bring in a serious marketing guru to look
at the whole PR picture from 'way outside the box.

More capacity, and better performance with weak signals.

Increased flexibility through simpler hardware, with more processing done in software. We already see this when a computer with a sound card can do packet, SSTV, PSK31, MFSK16 and lots more without so much as changing a jumper...

Mabey I'm wrong but....

1) Isn't Kentucky located BELOW the Mason-Dixon Line?
2) Didn't the citizens of the Kentucky Territories align with
   the CSA at the outbreak of the Civil War ? (or the War
   Between the States or War of Southern Independence...
   ...take yer pick boys!)

Just a wonderin

Well, this is going to get more interesting. Someone had provided a URL to
an article (I believe on the QRZ website) where one of the wireless devices
complained about 'interference' by a licensed amateur (ATV I believe).

Turns out the ham was protected whereas the wireless device wasn't. In any event, I read with some interest about the new wireless digital cameras. Seems they are going to be on 2.4 GHz. I am still trying to find out EXACTLY where they will be, but the idea is you walk within so may feet (yards, meters?) of this gizmo in the store and your pictures are transferred at something like a 20 MB rate (a few seconds for all you digital pictures on a 40 megabyte card!). There will also be very high speed wireless connections to the phone system to transfer pictures to a store for developement (or a website for storage). I sure don't have an answer to the points brought up already, but I find that this selection of frequency (depending upon exactly where) could prove - er - 'interesting', to say the least! I think we are going to have to generate more interest for our microwave bands - soon. We might find the 10 meter incursions by truckers just might be minor as to what may be in store for some of our higher bands.

So does that scare you Dick? I bet the rig you're using right now is far
more complex than the spark transmitters used in the early 1900's, and yet
you likely never even gave it much thought. Moving Ham radio in to the
digital domain we can really separate the men from the boys. i.e those who
understand what is going on inside of their rice box rigs, and those who
don't. I think that is a far better measure of knowledge that how fast one
can go beep on the air.

> So now only those with computer science skills will be able to build a ham
radio
> set,

Only if the person in question refuse to learn the new skills. This is sort of like the comment "learn CW if ya want HF access", right? 8->> To put the shoe on the other foot just go out and learn it and quit whining about it. It's not that hard to pick up the basics, heck even the current ARRL Handbook has a section on it if you bother to look.

> and thus no technical knowledge nor skill will be necessary nor
> required for ham radio licensing. Right.

For a good solid deep understanding of DSP several years of Calculus with Fourier, and Z-transform theory, is required. I would not call that a non-skill exactly. One can get by starting with much less, but one must be willing to learn as they go along.

I get the impression Dick that there are other Hams like you out there that are more than "comfortable" where there are, and any major change in technology just scares the willies out of them. Remember the uproar when SSB displaced AM? I see frequent posts here suggesting how to keep the status quo, or even how to turn the clock back without appearing to do so. However suggest "advancing" things, now we see some of the old timers break out in a sweat because they suddenly realize they are now on a level playing field with the "new kids" in the hobby, and with nobody to look down at anymore. I'm not picking on you Dick, but you do seem to fit the profile of the example I'm trying to make.

The Col is wasting his time and $$$ the FCC is fixing to move in very soon
they [FCC] don't have a choice in this the law is the law and it will be
enforced.  I cannot think of how foolish he is the guys on the networks make
plenty of $$$ in advertising fees. The Col will soon find when his ass is in
the sling that NO ONE and i mean  NO ONE will back him or help him with the
serious legal fees! All he will get is lip service and patronizing comments
and fake sadness

Uhhhhhhh Dick, every one of my ICOM's have a computer built in.
Virtually all commercial transceivers have computers built in.
A computer is a jellybean chip anymore, no larger than your
pinkynail. The IC-756PRO's computer has enough MIPs to perform
FSK and PSK31 encoding/decoding. The time is coming when virtually
all the functions in a transceiver will be performed by the built
in computer. I know that chaps your posterior but progress happens.
Buy some lotion. On second thought, rub some Desenex on it.

Which just proves the point I was making. There is no meaningful reason to retain code testing. Sure it has it's use, but so do many other modes. The PCTA group just can't let go of the past.

> You have the cart before the horse. There's nothing to plan for. WHAT
> digital modes?? How do ya "plan" for modes which don't exist in ham

I don't see you discussing any new ideas either. That's where it starts.

> This is ridiculous. . . we have a bunch of people in this NG plus the
> FCC plus others etc. who keep harping on this digital modes thing. My

Probably why they keep harping on it because a few die-hards don't get it yet.

> You've been hot into this subject for eons LeLand. What have YOU done
> to make your mystery modes actually happen?

You start by educating youself about what has been done to date. I doubt you have even done that. I have already done some work on learning a little of the theory / mathematics behind what is done now in some small areas. Namely pulse shaping, equilation filters etc. and how that is applied to packet communications. The question I have not seen addressed is why QFSK in not used in place of BFSK, where QFSK would double the symbol rate, and thus the data through put on a given channel. Little things like this Brian is where it starts. If I remember from your prior posts about the only thing you care about is contesting, advancing the hobby does not seem to fit your view of things.

That's why they use raised cosine pulse shaping when transmitting digital
data over long links.

> We have arrived at the point where digital TV takes closer to 30 MHz than
6,

Well they did fit it in to 6MHz here in the US. They did it by advance digital video compression techonolgy, and by using all of the wasted spectrum in an analog video signal to carry digital information. It really is shocking to learn how much of a 6MHz wide analog video channel has little to no energy content.

At the present time only 2 areas of ham radio seem to be "pushing the state of the art of radio" -- those two areas are satellites and radiosports (contesting). They seem to be the two leading environments where "squeezing out some more performance" is pushing the equipment and station design engineering-minded types forward.

Where was Spread Spectrum when we needed it? :-)

BPSK has lower throughput but better signal/noise ratio. Shannon's law
prevails. If you double the symbol rate with QPSK and cannot perform the
function, back off to BPSK. I believe that is how PACTOR II works and
I am here to tell you, it works wonderfully. I can establish reliable
communications to Germany when I cannot even hear the signal. You ask,
"How do I know it's there?" A fixed mailbox frequency, of course.

>folks - it's not a hobby-pirate station, so no QSL's)

Pfeh. Clandestines *do* QSL-at least the Centroamericano ones of the 80s
did-and clandestines run by governments hostile to each other usually
QSL to third party listeners too. QSLs exist from Middle Eastern
clandestine stations too-they usually reply to people with Arabic
names, so call yourself Habib if you're writing to one.
>

Usually a clandestine is the voice of a revolutionary *group*. This guy
was kicked out of the Kentucky militia for refusing to shut down his tx,
so unless he's joined some other militia, UPR is not a true clandestine
in the strict sense. This guy falls into a gray area. If I were to
operate an anarchist pirate, which I've thought of doing, it would be
just me so I'm not sure it would be considered clandestine. The
difference is that the usual clandestine is the *official voice of a
GROUP* instead of just the personal opinions of one person.

Ed, that "4-page" comment is a bit deceiving because of the content
(and tiny print) within those 4 pages. Why not, once and for all,
scan those 4 pages onto a web site so everyone could see what was
expected of that era Novice?    73, KH6O

Hi Steve,

Thanks for the reply. I was referring to the Sears h/t, not the link showing
```

the Signature "base station." Gotta admit, that little Signature "box" is pretty elegant for a toy. Sometimes I wonder why more toys like these aren't made. After all, it was a 3 ch. 300 mW G.E. h/t with a channel 14 crystal that turned me on to radio. Sadly, I know the answer...it's the Nintendo age. Oh well.:-(

Speaking of that 300 mW h/t, it also introduced me to the amity of the radio fraternity. You see, when I went down to the local CB/ham shop I told the merchant (Mike) that I had done some research and wanted to put up a dipole. I told him that I had twelve bucks of saved allowance to "make this happen." Well after some pointed questions about my particular "installation," I walked out of there with 12 ft. of RG-8U, a blitz bug, 9 ft. of RG-58 to run through the window, 20 ft. of stranded #14 antenna wire, two end insulators, a budwig center insulator,...and a set of crystals for ch. 20. (the local ragchew frequency) All for the princely sum (to this thirteen yr. old anyway) of $11.99. (those crystals were $8.99 alone) My father added some heavy gauge copper wire, a ground rod, and a beginner's lesson in soldering and I was off. That's why I always tend to look for the best in someone who's associated with radio, even if they appear curt or abrupt at first. Sorry if this is starting to sound like an episode of "As the Diode Turns," this all really brings back some very nice memories. Take it easy.

Why do you keep calling my rotary function switch a P-on/P-off button even after I've tried to correct you? Rotary, man, rotary! Both my transmitters have rotary functions switches, got it, you stubborn SOB? :) (See? I said that with a smile!)

A rotary switch, rotated between TUNE and STBY, poses no trouble at all in sending CW; for the third time, it's not practical, but it is possible. So your contention that "out-of-the-box CW is not possible" has been proved wrong. Concede, you stubborn Texan!! :)   73, KH6O

CAM wrote:
>Ed, did you realize that your newsreader is messing up the attributions?

I noticed that, too, and the reason is due to him inserting "From"
at the beginning of the attribution line; look at what happens when
that's done:

From

You see that the newsreader software inserted a ">" -- I
did not put in. That glitch is causing an added ">" quotation
symbol. If Ed can eliminate the word "From" in the attribution
line, the problem will go away.

Why does the USCG send BRK (the equivalent of -...-) after each NAVTEX message? A double line feed would have sufficed.

IMNSHO the "uhs" and "ahs" during QSOs are an artifice to hold the VOX circuitry in. I don't remember hearing it used much in PTT "territory".

On Tue, 29 May 2001 08:38:11 GMT, D. Stussy wrote:

>Cordless phones that operate on 33cm (900MHz) and 12cm (2.4GHz) CANNOT be protected because there are licensed services (including amateur) that are allocated those frequency bands. Not only that, but as part 15 implies, we (as amateurs) have a specific duty to listen to ANY device on those bands when interference with our own equipment (when we operate there) is concerned; the duty being to identify the source of the interference.

The law - the Electronic Communications Protection Act, 18 USC s. 2511 et seq - is very specific although full of legal technicalities and terms of art.

The "protection" provided by the Act is "legal" protection, not "physical" protection, and is independent of what band the radiotelephone operates. It provides penalties for UNAUTHORIZED interception (reception and/or decoding), use, or divulgence of the CONTENTS of the communication. Enforcement requires a complaint by the "sender" who holds the rights to the "protection".

There are certain categories of interception which are exempt from this proscription, including a co-channel licensee investigating actual interference, but this exemption extends only to identifying the source of the transmissions but does not convey any right to divulgence or use of the contents of the communication.

>The only phones that can be protected are the 49MHz phones - and only

```
>because they are NOT in a frequency band that is also allocated to
>another service.  Their frequencies are exclusively their own.

  Totally inaccurate....useless and dangerous if offered as a defense
  against unauthorized interception.

  PS - do not be confused by the recent USSC decision regarding the
  broadcast of unlawfully obtained recordings.  It dealt only with
  the (non) liability of the uninvolved third-party receiver of the
  material which was illegally obtained by interception, and heavily
  depended on their ruling several decades earlier involving the NY
  Times and the Ellsberg Papers.  In that one, had the thief been
  named Stussy or Kane instead of Ellsberg, we'd still be mopping
  floors in K-Block at Marion.

It isn't the phones that are protected, it's the contents of the

```
  communications which are protected from unauthorized interception,
  use, or divulgence.

  And the ECPA was amended several years ago to cover communications
  using the 46 MHz cordless phones as well as the more common cellphones.

Do not confuse protection from interference (FCC Rules) with
protection from unauthorized interception (ECPA). Two entirely
different things.

W1RFI writes:
>Why do you believe that the governments of the world initiated a
>Morse-code test for Amateur Radio back when it was started?

We'd have to take a trip back to 1912 to answer that question: At one one time, Morse was the only mode in use and all wavelengths were shared. QRM between services was incredible with constant on-air fighting, especially between hams and the Navy; for example:

"As one old veteran laughingly recalled, 'There were no wavelengths in those days; it was a free country and the air was free to all, including the right of small boys to tell the Navy Yard station to "Go to Hell!" on the air.' The combination of mischievous boys and their radio sets had infinite possibilities for devilry. The harried existence of the Navy and commercial coast station men through mutual interference was galling enough, but hundreds of amateurs added further trials and torments to their tribulations. As one of the "NY" operators related to the writer, 'The Tin-can amateurs loved to tantalize the Hell out of us.' It was no uncommon occurrence to hear "NY" or some other commercial station call out in exasperation and despair, "You kids shut up!" as he vainly tried

to catch a faint but important message from some ship far out at sea. The "tin-cans" blithely continued their school-boy gossip or soundly abused the commercial operator for his temerity in questioning the freedom of the air. Even next day's arithmetic lessons were compared and solved over the air by schoolboy amateurs."
(The writer continues with many other examples of hams causing intentional QRM; taken from Baarslag's SOS To The Rescue, 1935)

The final straw was hams causing QRM to Titanic-related traffic:

"With the first news of the sinking of the Titanic, every amateur in America camped on his key and added to the bedlam..."

"Thousands of messages piled up at the shore stations. At the solicitation of the American Marconi Company, the government ordered all radio stations north of Hatteras closed down, leaving only those at South Wellfleet, Siasconsett, Sagaponack, and Seagate open; they were to handle Carpathia traffic exclusively. The order was enforceable only on commercial stations; the amateurs blithely continued "on the air." The situation became so desperate that Newport Radio, a naval station, "requested every station in range to keep out" until a list of the survivors could be obtained. Department of Justice men went to work tracing the origin of misleading messages."

The end result? Licensing for amateurs and banned from wavelengths above 200 meters. Here were the 1912 licensing requirements:

Code speed: 5 wpm

One had to recognized the official KEEP OUT signal and distress call.

Be knowledgeable of the International Radio-telegraphic Convention in force and Sections 3, 4, 5, and 7 of the Act of Congress of August 13, 1912;

One also had to take a seven-question written exam covering:

1. How to make a diagram of the transmitting and receiving apparatus
2. How the transmitting apparatus is made and how it works
3. How the receiving apparatus is made and how it works
4. The International regulations for wireless communications and the U.S. wireless laws and regulations.

(Taken from The Book Of Wireless, Frederick Collins, 1915)

That written exam was an essay-type test. As the government examiners were fond of saying back then, "What you fail to say, you don't know."

What was your question again, Ed? :)

Ever hear of internet delay, Jeff. If not, you are quite ignorant.

> A rotary switch, rotated between TUNE and STBY, poses no trouble
> at all in sending CW; for the third time, it's not practical,
> but it is possible.

For the third time, my IC-706 has absolutely NO tune switch anywhere.
Why do you refuse to read my postings? :-)

For the fourth time, my IC-706 doesn't have a tune switch - no room for one.

Hey, memories are cool! I remember the "early" days of my radio "career" too!....That little box actually made it to the far side of town (about five miles) and I thought THAT was great DX!

I also had a crystal set I made (around age 6 or seven, I guess) that I wound on a large wooden dowel that was shellac'ed and had lot's of brass. It worked great and looked even better!

Got that, Brian? More throughput, which we need for *what*? And these
digiputer fans who've never been involved in weak-signal CW seem to be
oblivious to its attributes.

BS, Leland, you do it just because you think you can figure out how to
do it, and no doubt you can.
So, go ahead- but you might as well get used to the idea that there are
a whole lot of people who aren't so thrilled as you about the
UNNECESSITY of it.
I have noproblem with simple gear. I have no problem with complex gear,
but I have a real problem with forcing hams to adopt provides little or
no REAL everyday benefit.
I see this in exactly the same light as High Definition TV. I don't see
anything that excites me at all,nor do I see any way that will change.
Show some real benefit, and we'll always be willing to take a look.

Complicating ham radio such that it acts like a Windoze computer with
all its posterior pains won't make the grade. And I'd wager there are
more who see it my way than yours.

Moving Ham radio in to the
> digital domain we can really separate the men from the boys. i.e those who
> understand what is going on inside of their rice box rigs, and those who

If this NG is any indication, it will separate the digital dipschits
from the Real Hams.

So go ahead and do it, no one is stopping you. Execept- You've been mouthing all this drivel for years not and yet not a hint of anything other than noise eminates from South Texas. Why should we believe a thing you say?

The IC-756PRO's computer has enough MIPs to perform
> FSK and PSK31 encoding/decoding. The time is coming when virtually
> all the functions in a transceiver will be performed by the built
> in computer. I know that chaps your posterior but progress happens.

I hate to tell you but nothing about progress chaps my ass nor any other part of me. You digigeeks gotta support your agenda which is advancement of the -your- digital domain, hey, its what you do. Just don't expect everyone else to follow along like lemmings. We can look at it all realistically. You can't.

You DO know the difference between the two classes of permissive
modifications which do not require re-authorization and the major
modification which requires formal re-authorization, don't you?

Adding tone capability to a transmitter not previously certified
with that capability will change the authorized emission designator
(adds A2A to A3E) and thus requires re-certification as a major
modification. Even permissive modifications require notification to
and approval by the Commission under most circumstances if made by
someone other than the original grantee.

It's not all that simple, is it? See Section 2.1043 of the Rules.

> And it's ALL north of the Mason-Dixon line.
While the Daughters of the Confederacy has a star for Kentucky, the state
never formally left the union. "Rebel" raiders set up their own provisonal
government and that "Government" suceeded.
Mr. Lincoln stoped the process by which states left the union.
States had to have a convention that reflected the will of the people.
Lincoln made damn sure that meeting never happened.
Ky was mostly northern until after they "enjoyed" several years of Union
occupation. A dark and grim time. The union military practiced the fine art of
retribution. For every Union Trooper who died, they (the northern army)
rounded up "southern sympathisers" and shot or hanged them. No trial, and
```

it was never made all that clear how they picked their targets.
Armies of occupation are not noted for their tender loving kindness.
This left eastern Ky in one heck of a mess. And the wounds have not healed
after 140 years. I sometimes doubt if Eastern Kentucky will ever heal.
As a former Kentuckian, of "hill billy" extraction, I have studied the mess
and see no good solutions.

>What if it's your 440 mobile transeiver?

Jim:

Which 440 mobile transceiver would that be? Ever since I bought my
new car, I haven't had a 440 "mobile" rig in use.

If and when I ever get another dual-band or 440 rig back in my car, and I inadvertently trigger someone's radar detector, I am not at all legally or morally responsible, since a 440 rig isn't designed for the purpose of triggering radar detectors, and there is no intent on my part to do so. People who use those "prank" microwave transmitters to trigger the radar detectors of people driving at excessive rates of speed are committing a deliberate act of reckless endangerment of the motoring public, and should be dealt with accordingly under the law.

Had you ever had the opportunity (not intended as slam) to take the old First Phone, you would have been introduced to a telephone line phenomenon called 'twist' which had been known since before Harry von Zell gave us "the President of the United States, the honorable Hoobert Heever". An interesting problem to be sure but not the same problem; in fact, its use makes subsequent problems worse.

little
> to no energy content.

Outside of a lab, the 6MHz has turned into 30 everywhere it has been used when the various intermod products, buckshot, and assorted trash are included. The Euros have been a bit more sucessful in their 8 MHZ channels.

Kim Elliot (Communications World on VOA) a few weeks ago had an interview with one of the jolly folks testing the AM digital replacement. While he has a different problem than pure digital, it is a digitial signal under the AM one at very reduced power levels, he will admit that it takes up the AM channel and the guard channels as well. Just what this will sound like at night is anyone's guess. The digital FM guys can't keep channel width under 800 kHz in practice.

All of this is not a military secret in the analog world. If you want to wring out an audio amp it is done with first a single tone to see if the output resembles the input at all, then two tones to measure interactions, and three if you want to stress it a bit. I have never heard of a 64 tone test but it would be the ultimate trial for Hi-Fi Magazine or whatever it is called these days.

If the object of the game is to get 64 tones from A to B, at least these considerations apply:

1. The tones should be chosen such that intermod products of any two do not produce a third. Contemplate at length the freqs chosen for DTMF (Touch Tone). Not always possible but it is an alert. Equally spaced tones don't work as well as chromatic ones in music or data transmissions.

2. No transmission medium has perfect fidelity or anything near it. HF is cute because it is not the same everytime. They also snap, crackle, pop, echo, have wandering FHSS signals, and distort tones unequally.

3. Nothing can be keyed instantaneously. Speed kills. Phase-shift is probably the best in practice simply because it cannot be done instantaneously or even seriously attempted and is easily recognized -even anticipated - on the other end.

> --
> Leland C. Scott
> KC8LDO

Digital in large measure is CW on a grand scale; everyone agrees on a code and blasts away. Now it happens that the various variations on Morse are designed for the capability of wetware more than software -- it drives software to drink. But this is nothing new: when the Teletype machines were made to work in a clatter of moving stamped metal pieces and the odor of burning machine oil, it became readily apparent that OOK did not do it simply because software could not easily identify the zero-state. So two-tone AFSK became the order on VHF, reproduced on HF with the BFO. Incidentally, duplex and multiplex channels existed for TTY; contemplate the ir choice of tone frequencies as well. Again, coding structure is the argument more than the technology, a situation which exists in this world today and has for decades. The same arguments are current on the Internet: such issues as whether the header block should contain space for carriers to charge each other. And you get the same flap between the Purists who do not want to contaminate the pristine Internet with money and the Economists who point out that it takes money in the bank, Frank.

In the early days of personal compooters (8008, 8080 vintage) it became desirable to transfer programs on tape cassettes. The standard for doing so was hammered out at a convention and became known as the Kansas City Standard. It is this transparent standard-setting that has been the strength of the US economy since about 1880 when 4ft. 8 1/2 inches became the standard railroad guage and the clock at the station ran on mean time at the nearest (more or less) meridian divisible by 15. Only if you buy a range or dryer are cords and plugs at all a problem in the USA and that not a large one. Standards, man, standards.

Digital is not a 'Revolution' but a pretty standard evolutionary process that has been going on for years. On the ham bands, the question is -- and it is a better one than digifreaks admit -- is Good Lord, Why? The use of wetware in preference to software is somewhat the raison d etre for the whole verstunken shooting match. At the same time, anyone who has ever strung a dial cord appreciates the cost and functionality of a good PLL.

Besides, the biggest changes in Amateur radio come about when some good, hi-grade commercial junque becomes available.

Dick N�BK

Subject: Air Controller Humor
>
>
Who says pilots and controllers have no sense of humor? The following
are reported accounts of actual exchanges between airline and control
towers from around the world.
>>>>
>>>>=-
>>>>
During taxi, the crew of a US Air departure flight to Ft. Lauderdale,
made a wrong turn and came nose to nose with a United 727. The irate
ground controller (a female) lashed out at the US Air crew screaming,

"US Air 2771, where are you going? I told you to turn right on "Charlie" taxi way; you turned right on "Delta". Stop right there. I know it's difficult to tell the difference between C's and D's but get it right." Continuing her lashing to the embarrassed crew, she was now shouting hysterically, "God, you've screwed everything up; it'll take forever to sort this out. You stay right there and don't move until I tell you to. You can expect progressive taxi instructions in about a half hour and I want you to go exactly where I tell you, when I tell you, and how I tell you. You got that, US Air 2771??"
>>>>
The humbled crew responded: "Yes Ma'am".
>>>>
Naturally, the "ground control" frequency went terribly silent after the verbal bashing of US Air Flight 2771. No one wanted to engage the irate ground controller in her current state. Tension in every cockpit at LGA was running high.
>>>>
Shortly after the controller finished her admonishment of the U.S. Air crew, an unknown male pilot broke the silence and asked, "Wasn't I married to you once?"
>>>>
>>>>=-=
>>>>
The controller who was working a busy pattern told the 727 on downwind to make a three-sixty (do a complete circle, usually to provide spacing between aircraft). The pilot of the 727 complained, "Do you know it costs us two thousand dollars to make a three-sixty in this airplane? Without missing a beat the controller replied, "Roger, give me four thousand dollars worth!"
>>>>
>>>>=-=
>>>>
A DC-10 had an exceedingly long roll out after landing with his approach speed just a little too high. San Jose Tower: "American 751 heavy, turn right at the end, if able. If not able, take the Guadeloupe exit off of Highway 101 and make a right at the light to return to the airport.
>>>>
>>>>=-=
>>>>
It was a really nice day, right about dusk, and a Piper Malibu was being vectored into a long line of airliners in order to land at Kansas City. KC Approach: "Malibu three-two-Charlie, you're following a 727, one o'clock and three miles."
>>>>
Three-two-Charlie: "We've got him. We'll follow him."
>>>>
KC Approach: "Delta 105, your traffic to follow is a Malibu, eleven o'clock and three miles. Do you have that traffic?" Delta 105 (long pause and then in a thick southern drawl): "Well... I've got something down there. Can't quite tell if it's a Malibu or an Impala, though."
>>>>
>>>>=-=

>>>>
From unknown aircraft: "I'm f...ing bored!".

>>>>=-=
>>>>
The German air controllers at Frankfurt Airport are a short-tempered lot. They not only expect one to know one's gate parking location but

```
how to get there without any assistance from them. So it was with some
amusement that we (a PanAm 747) listened to the following exchange
between Frankfurt ground control and a British Airways 747 (call sign
"Speedbird 206") after landing.
>>>>
Speedbird 206: "Top of the morning Frankfurt, Speedbird 206 clear of
the active runway."
>>>>
Ground: "Guten morgen! You will taxi to your gate!"
>>>>
The big British Airways 747 pulled onto the main taxi way and slowed
to a stop.
>>>>
Ground: "Speedbird, do you not know where you are going?"
>>>>
Speedbird 206: "Stand by a moment ground, I'm looking up our gate
location now."
>>>>
Ground (with some arrogant impatience): "Speedbird 206, have you never
flown to Frankfurt before?!?"
>>>>
Speedbird 206 (cooly): "Yes, I have, in 1944 with an earlier Boeing.
But I didn't stop then."

The problem is that my browser crops all outgoing text to a certain width (currently set at 70). If another person uses the exact same setting, his text is going to be broken up when I quote it in a reply (a ">" has been added, so his text is now wider than 70 characters). In fact, if there are several exchanges, with several ">" added, his text will be a total mess. The only way around this is to firmly edit quoted text. In the end, I wish browser makers would offer an option to have quoted text one width and text written by me another width.

The real question should be.. If the amateur community can't come to a
consensus to make any changes, then why should there be changes at all ?

Just what changes is he threatening to make in leiu (sp) of consensus on
what ?

Why?  The evidence from the past would certainly
show a much higher incident rate which can easily
be shown to be a result of the unavailability of any
other alternative (GMDSS, etc.)

Oh, you would not believe the stuff I've told my wife over the years, Phil. Now, she, of course, knew that she would not have to pay for excessive road wear because of her shopping trips. However, I have told her some really good stories over the years that have taken her months, or in a couple of cases, years, to figure out was absolute BS. At this point, whenever we discuss something, she spends almost as much time trying to figure out if I'm pulling her leg as she does thinking about what I say. It is her one weakness - she was gullible when I married her (she married me, didn't she) and she is still gullible today. Anyway, it is when she discovers that I've "done it to her again" that I have to be concerned about my potential head wear.

Thanks for that comment. I was considering Earthlink as a potential replacement for my ISP, but I see that isn't such a good idea.

Don't ever install their software! One of the first things you will notice is that you cannot key on the link you provided to your website or any other you encounter. In the world of Earthlink, you do things one at a time so when you key on the link, it says 'program missing'. It degenerates from there. That is, of course, after the demon-dialer has called Earthlink 8 or 9 times and you get connected at 19kbs with your V.90. They have admirable service people who will listen forever but they are powerless.

I finally restarted from the boot-up CD and rebuilt everything from backup disks of some files. Not something you do for fun but it works. I went with the el cheapo ATT service, $7 unlimited which gets me LD service I don't use enough to matter. Aside from having to kick out an ad now and again it has performed flawlessly. It has burped twice since I was on it, recovered nicely and has never connected below 49kbs.

Part of an ISPs problem is that everything is sub-contracted (including

Usenet which has about three equally incompetant subcontractors) so I was going from Qwest to the defunct ISP to Cable & Wireless to South Petunia Gulch. There is something to the KISS theory.

Good Luck.

Oh, give me a break, both of you. We all know the license class of most people in this newsgroups. As for the regulars, we have certainly discussed license class enough and certainly some of us have visited the others' web sites and so forth. And, when it comes to new people posting, it does not take long before we figure out their license class also (even if they don't mention it). For example, I'm not the only one who has looked up a new person, who has start posting here on a regular basis, in a callsign database. And, I'm sure most of us will visit the new person's web site if we're aware of the URL. Therefore, if my wife posted more than a few messages in this newsgroup, most here would know her license class very quickly without any mention of it by her (and that includes both you and Larry).

Want further proof? Show me where I specifically said that my wife currently has a Technician license. I told a story about something that happened when she got her Technician license several years ago, but I did not say that she currently has a Technician license. Yet, both of you (Larry and yourself) are obviously aware of her current license class (both of you have made comments relating to her license class).

Want still more? You both claim it is Technicians who are the first to whine about code testing. Show me where I've said my wife is opposed to code testing. In fact, show me where I've said she has any position at all when it comes to the code testing debate. Yet, both of you have associated the anti-code testing position with her (Larry saying that she would be welcome in this newsgroup if she doesn't whine about it and you, responding to that message about my wife from Larry, ranting about Technicians whining about code testing). Both of you are whining about this particular Technician (my wife) whining about the code testing debate before she has even posted a single message in this newsgroup (or has offered even an opinion on the subject).

In other words, both of you (Larry and yourself) are so full of it, neither of you can see how absolutely absurd your comments really are. When you two are finished wallowing in the BS, wipe your eyes and look at some of the silly stuff you've written. I would be ashamed if I wrote such nonsense.

Larry Roll K3LT wrote:

> If you can find an example of where I've abused someone who didn't provoke me by whining about the code testing requirements, or posting a message seeking some sort of public congratulations for the dubious achievement of having passed an entry-level license test, making some similar remark indicating that he/she is worthy of praise, fame, and fortune for the simple act of getting a ham radio license in their pocket, I'll gladly buy you another lobster. [snip]

Larry, you always claim it is the Technicians who are the first to whine about code testing. However, you recently said that my wife would be welcome in this newsgroup if she does not whine about code testing. Show me where I've said my wife is opposed to code testing. In fact, show me where I've said she has any position at all when it comes to the code testing debate.

Why, then, would you urge my wife not to whine about the code testing debate when she has never even posted a single message in this newsgroup or offered any position whatsoever about code testing?

The answer is simple - you jumped to the conclusion that she is opposed to code testing solely because she has a Technician license. In other words, in your mind, every Technician is opposed to code testing and it is on that basis alone that you have formed your opinion that the Technicians are always the first to whine about code testing.

You're not going to change a word and get out of this that easily, Larry. We were not talking about an "invitation." You said she would be "welcome in here, and won't be abused, as long as..." And I said it was big of you to "welcome" my wife into this newsgroup under your terms.

> I don't set the "terms," either.

You most certainly did set the terms for you to "welcome" her into this newsgroup and for her not to be abused by you when she does - she can offer no argument against code testing (what you call whining).

> I am not making any "demands" on her or
> anyone else, and wouldn't dream of such.

Again, you most certainly did for you to "welcome" her into this newsgroup (and not be abused).

> Where have I ever said that? It isn't
> the difference of opinion I object to, it

Larry, you've already urged my wife not to whine about the code testing debate before she has even posted a single message in this newsgroup or offered any position whatsoever about code testing? In other words, without hearing a single comment made by her about code testing, you have already started into her about "whining." Like I said, according to you, everyone who has an opinion about code testing that is different than yours is whining and deserves to be abused.

> out here and on Fidonet, but nobody is
> keeping score on the no-coders the way they
> are on the politically incorrect pro-coders.

I've asked you this before, and I'll ask you this once again - show me where "I" have ever blamed you for any of those things. I have never held you accountable for the things that are said by other "pro-coders," so why are you holding me accountable for what other "anti-coders" may have said to you? We're not talking to "pro-coders" or "anti-coders," Larry. I'm talking to you and you're talking to me. Lets not dump that other crap on either of us.

By the way, and I've also said this before, I'm not "anti-code." I'm opposed to a code test requirement. As far as the use of code in the ham bands, I have absolutely no problem whatsoever with that. In fact, I might even play around with that mode myself one day.

Recall from Logic 101 that to prove a proposition is false,
all that is needed is to provide a single example in which
the proposition fails, and that's sufficient to completely
nullify the entire proposition.

Cecil's original proposition made no mention of "modern radio";
appending that creates a brand new proposition.

And you think that Technicians should tell us they are Extras? I think it is a darn shame that some older hams think that Technicians have to keep their license classes a secret.

Close, Larry, close. :-)  And, if my reading of history serves, it was at first
the ONLY mode (via spark) available at the time.  When it was the only mode, a
5 wpm test served for the Amateur Radio Service.

You are right, with considerable difficulty, I could probably build a reliable mechanical key. But the key I built would not be as good as the commercial keys I could buy. OTOH, I am confident I could build a TNC as good as the commercial jobs. Of course, in either case, I would prefer to buy one.

```

I think nearly every commerical amateur radio transceiver sold for the past 10+ years has contained a microprocessor, Dick. Many of them now contain internal DSP to create or demodulate the signals. I hate to tell you, but radios were turned into computer quite some time ago. So were toasters. You gotta' get out more, man.

As to your claim that hams will be able to build sophisticated SDRs without technical knowledge is entirely without merit. One will still need to understand construction techniques and understand more, not less, technology than it takes to build a "classic" ham radio project.   If it is so easy that one can do it without technical knoweledge, whip up a DSP-10 any time in the next month and I will buy you a lobster.

The whole premise from there is that the functionality of the radio can be programmed. This is an excellent opportunity for hams to do the technological development of this millenium -- software. Nothing should stop hams from building "classic" ham radio projects, Dick, but those who are pursuing SDR within Amateur Radio are doing what hams have done for decades -- experimenting for themselves with the technology of the day.

I am glad some are doing it, because if all hams did was experiment with the classics, we would soon lose complete track of the technology of the day. I cannot see how that could be good for Amateur Radio.

In what way have you been forced to do anything, and by whom?

As to the benefit, the maturation of DSP and SDR will bring a really exciting era into radio in general, including Amateur Radio. What technological advancement has not done so to date? And this one doesn't even come with unwanted side effects; you can continue to do exactly what you want within ham radio, and none should look down on you for doing so.

>Show some real benefit, and we'll always be willing to take a look.

The real visionaries in ham radio have been able to see benefit all for themselves.

The creation of PSK-31 certainly advanced the state of the art within Amateur
Radio.

Some of the work being done by Larkin et al with the DSP-10 has pushed the
state of the art -- who woulda' believed a 2-way QRP moonbounce contact?  Now
that TAPR is kitting the DSP-10 (expected delivery in July), I think we will
see some exciting new things pop out of the Amateur Radio woodwork.

>Where was Spread Spectrum when we needed it? :-)

I don't think it would work well for TV, Cecil. Right now, I can envision at
least a 100 dB difference between the weakest usable signal and the strongest
signal one can expect if one lives near a broadcast transmitter.  If one
assumes a 6 MHz baseband bandwidth, one would need 100 dB of process gain, and
that simply is not feasible, IMHO.  SS works very well when power and signal
levels can be carefully controlled, but I can't see it working for broadcast
TV.  It might be made to work inside a cable, though; I don't know enough about
it to be able to analyze it.

They wouldn't be able to that if we could stop our petty bickering and develop
a concensus. The Commission encourages industry to develop concensus, too.
The key difference is that they do -- various standards bodies have managed to
hammer out standards that prevent the need for regulation. In spite of deep
differences, with financial incentive behind them -- they do develop standards
because they know that they are better off with them than without them.

Correct; the wireless ISP involved was Darwin Networks. Jim Haynie contacted the FCC and Riley sent them a letter, asking them to explain how they intended to address the harmful interference to the Amateur Radio Service.

>higher bands.

Most of these 2.4 GHz and 900-MHz devices are legally FCC certificated, so they have every legal right to exist, subject to the provision that they not cause harmful interference to radio services. If there is no one on the band, there is no harmful interference. Even if there is a ham listening, merely hearing a Part 15 device does not meet the level of harmful interference as described in the rules.

If we don't use 'em, we may not lose them because Part 15 devices may actually offer us some protection against further spectrum challenges, but, in practice, that non-interference clause can be impossible to enforce. The FCC did the right thing wrt Darwin Networks, but it remains to be seen how they will act in the long run. And what does the ham who lives on the hill do when he or she can hear a 20 dB increase in noise on the Part 15 part of the band from the aggregate of devices in the valley below?

Using AOL, I have been doing that all by hand. I didn't think that it would not be clear if the first line said:

From: jeffreyh@Hawaii.Edu (Jeffrey Herman)

instead of:

>From: jeffreyh@Hawaii.Edu (Jeffrey Herman)

If it is causing confusion, I will change my practices.

Man, I hate Agony on Line, but my wife insists we keep it and I can't see having two ISPs. I realize I could use a separate newsreader, but this is really all I use AOL for, so I make do.

Yes, I have already ceded the point. But I can't build a reliable mechanical
key that works as well as one I can buy. How many hams use that old hacksaw
blade as their main keyer? :-)

If your talking about where the phone company periodically transposed the wire lines along a given route, then yes I have read about it. It was done because the phone lines share space with the power lines on the utility pole. If I remember reading right it was done to reduce power line hum pick up. By swapping the lines around at a predetermined interval the phone lines remained balanced relative to the power lines and ground.

"Phil Kane" <Phil.Kane@nospam.spam> wrote in message
news:<cuvyxnansvbet.ge4cgb1.pminews@ca.news.verio.net>...
Hi Bert:

Perhaps it is that simple. If this looks good to you, consider this my "going away" present. I was going through some reviews on eHam and I found a reference to this website.

http://www.geocities.com/n2ffl/htx10.html

On here is a CW mod for the Radio Shack HTX-10. Get this...it's all outside the radio and is constructed in an Altoids tin. The assembly then connects to the radio via...ready for this?...the mic connector. It's for the HTX-10, but I'm sure it's readily adaptable for your purposes. As they say in London, "get cracking!"

As for the legality, you be the judge. Don't forget to include the "common sense" factor. Look, if you dig hard enough, you'll find a sub-article this or a paragraph xx.that, etc...that's not kosher. Stop and consider what you're doing. Practicing MORSE CODE within the legal power limits on a frequency that you've already shown to have had devices legally marketed for that purpose. Is this not actually refreshing in a band where illegal amplifiers and lid activity are all too prevalent? I'd think if ANY FCC agent were really dim-witted enough to hassle you over this, more than a few licensed amateurs might actually come to your aid. (I can think of two off the top of my head.) I dropped you an e-mail re. my address in HC land. If I have access to a terminal, I'll post again. Internet cafes are the norm in Guayaquil. Bye.

I don't think it's B.S. at all Dick. I will agree that not every one is up to the task, same goes for building a current design rig too. Everybody comes in to the hobby with different skills, and some are better at them than others. But then again certain skills don't warrant the attention they get, nor the endless debates either. As the hobby grows, ages, particular skills and technologies come and go, or increase or decrease, in relative importance. We should not make a big deal out of it because it is the natural way the world works, things change.

> So, go ahead- but you might as well get used to the idea that there are
> a whole lot of people who aren't so thrilled as you about the
> UNNECESSITY of it.

This reminds me about a bit of Ham history where SSB was coming in to use and displacing AM. I think the exact same comments were made back then too. After all AM worked just fine and sounded great, no "duck talk" as SSB was refered to at that time. I would agree with you that we should not chage things just to change them, but only if it makes sense. But we will not know that until we at least try it first.

> I have noproblem with simple gear. I have no problem with complex gear,
> but I have a real problem with forcing hams to adopt provides little or
> *no* REAL everyday benefit.

In your case that may in fact be true. However don't assume that the majority will not experience big benefits. For example I would just love to see the manufactures include digital DSP voice control to my mobile rig. The new all band do everything micro wonder boxes are a pain to use mobile with several menus to work through to do simple everyday things. I would like to simply speak in to the rig's mic and tell it I want to scan lets say the SSB section of the 6m band. Right now I have to screw around with several menus and 4 or 5 button presses to do it at a minimum. That would be a benefit to me right now, less distraction messing with the rig while driving.

> I see this in exactly the same light as High Definition TV. I don't see
> anything that excites me at all,nor do I see any way that will change.

The FCC did something similar with the beginning of FM broadcasting years ago too. Now you hear from some of the AM broadcasters that they can't compete with FM broadcasters.
As far as the High Definition TV goes it looks much better to me than the old NTSC (Never The Same Color) system currently in use. I will wait until the price drops before getting one however.

I think it's a bet you would lose, so just hang on to your money Dick. 8->>

I think it's more like "driving the state of the art" myself. So the
contesters demand more performance then the engineering types at the major
manufactures give it to them. So if the increased performance uses DSP,
which seems to be the case, then that's what they get in the next version of
their rice box rigs. Just look at the new FT-1000 Mark V for an example.

The Stockholm Syndrome is "an emotional attachment to a captor formed by
a hostage as a result of continuous stress, dependence, and a need to
cooperate for survival." If the no-code Techs would only react that way,
it would make all the old-fart hams happy.

I had a near-perfect ISP, IBM.net. AT&T acquired IBM.net and service went straight down the tubes. I switched to Mindpring which wasn't as good as IBM.net but was acceptable. Earthlink acquired Mindspring and performance went down the tubes. It appears that when an ISP gets overloaded, it acquires a new ISP and immediately overloads it by offloading some of the previous overload.

If the unreliability of an ISP is 20%, signing up for two ISPs cuts the unreliability down toward a minimum of 4%. That's what I have done - signed up for two ISPs each $10 per month.

"Out of the box" implies a new (modern) radio, Jeff. Sorry, you lose.

Slight corrections: It's an 850 amp battery - I don't know the aH rating.
As for the bevy - I can only dream.

But, Jim, a "what if" statement is specifically designed to explore
possibilities outside the initial boundary conditions.

Sure, a dedicated microprocessor to control the frequency generating
and other functions. Works quite well, too.

Many of them now contain internal
> DSP to create or demodulate the signals. I hate to tell you, but radios were
> turned into computer quite some time ago.

Naw! Just specific functions which lend themselves particularly to
digital processing. No doube there are better rendidtions of DSP than
I've owned, but so far I haven't use a single one which I consider worth
what it cost. The DSP on my IC756 never gets turned on anymore.

>
> As to your claim that hams will be able to build sophisticated SDRs without
> technical knowledge is entirely without merit.

If it had been my claim, it would be without merit. It was not. It was
the ormal progression ot what we've already seen so much of from some of
you-that hams don't do their own design and building anymore, so why
should they have to learn all that technical stuff?

One will still need to
> understand construction techniques and understand more, not less, technology
> than it takes to build a "classic" ham radio project.

You can head it up right there, then. Hams aren't learning enough with
the question pools to even get started.

> The whole premise from there is that the functionality of the radio can be
> programmed. This is an excellent opportunity for hams to do the technological
> development of this millenium -- software.

As to how well it does all the functions now performed so well by
analog circuitry, I'll believe it's really better when I see it. Maybe
someday...

I absolutely agree; those that passed a code test had no choice but to meet the requirements of the day, whether they passed a 5 wpm code test in the 1910s or a 5 wpm test in the 2000s. Some of those that believe that the Morse code test should be eliminated have passed a code test, or intend to; others are not, and will probably wait the few to several years it will take to see any changes in the US regs.

The latter are going to miss out on a lot of HF fun.

Forgive me, Dick. It is my impression (and I could be wrong) that the
offenses expressed as you represent them above have probably not been in
disrespect to the person because of their "passing CW tests" [paraphrased],
but is more quite defiant against the "kiss my feet because I did" attitude.

I dare say that if any non-muddy water can be found these days, you'd not
find a single person who would ever deny someone else their pride in
achieving a CW test passing score.

Kim W5TIT

>Here's the provocation:

>>I didn't feel this way until I read your
>>posting -- so congratulations for rekindling my enthusiasm for bashing
>>the no-coders!

Where's the provocation, Larry? Those were your words.

But it is my lobster at stake, so in what way did each of the thousands of newcomers you trashed with the following provoke you into say this:

>> I'm hoping that 48 hours from now,
the "newcomer bashing" takes on a new
>> and more enthusiastic approach; truly crushing the spirit of any further
>> "newcomers" to the HF phone bands.

I note you didn't qualify either of your statements with a notice that it applied only to those who whined or who had provoked you somehow. In what way do you feel that blanket statement applied only to those who you feel justified in trashing?

OK, but that still doesn't tell us what it means. Certified IS a word in the English language (past participle of "to certify") while certificated is not (at least per all the dictionaries I checked). There is a noun, "certificate," a document indicating that something has been certified ("serving as evidence of status, qualification, or testimony"), and "to certify" is the verb form (literally meaning "to make certain"). There is NO verb form "to certificate."

You are right; it is not working as well as it will someday. I am hoping that Amateur Radio can play some role in making that someday happen.

That's an idea. Put the nocode Techs in a sun hut until they start
behaving themselves and acting like Real Hams.

Certainly, an LM324 will probably do the trick. I've got a few hundred
of those in my junk box. Do you need any?

Run it through a couple of stages of op-amps and it will work well
enough. I also have some digitizing pad material that could probably
be converted into a microphone pretty easily.

I once used a hacksaw blade to cathode-key a 6L6. It knocked me
across the room.

Well, Phillips advertises a flat screen TV and CA wouldn't have as
big a power problem if they hadn't let Hanoi Jane shut down SMUD's
Rancho Seco.

The DSP filtering on my IC-706MKII works so well I can QSO on 40m SSB
at night in between commercial AM stations.

> You're not going to change a word and get out of this that easily,
>Larry. We were not talking about an "invitation."

Dwight:

I'm not going to quibble with you over the subtle differences in the
meaning of "invitation" and "welcome." I don't "welcome" anyone
into a place where they have, IMHO, a perfectly obvious right to
be! With or without my "invitation," your XYL can post here as she
pleases -- as long as she is willing to take the heat once having
stepped into the kitchen!

>You said she would
>be "welcome in here, and won't be abused, as long as..." And I said
>it was big of you to "welcome" my wife into this newsgroup under your terms.

If it makes you feel better, consider my "welcome" withdrawn.   She
doesn't need it anyway, so what does it matter? All I've managed to
do is give you something else to whine about. My mistake!

>> I don't set the "terms," either.

> You most certainly did set the terms for you to "welcome" her into
>this newsgroup and for her not to be abused by you when she does - she
>can offer no argument against code testing (what you call whining).

You have no reason to presume that your XYL would be "abused" in
any way, since you have no idea what she would have posted here --
mainly because you don't really want her to do so.

>> I am not making any "demands" on her or
>> anyone else, and wouldn't dream of such.

> Again, you most certainly did for you to "welcome" her into this

>testing, you have already started into her about "whining." Like I
>said, according to you, everyone who has an opinion about code testing
>that is different than yours is whining and deserves to be abused.

Dwight, you couldn't be more wrong about this. If I can find anyone
who can make a logical, convincing argument *against* code testing,
one which convinces me that I was wrong and that they are right, I
would certainly not "abuse" them in any way! And even if you simply
disagree with code testing for your own selfish reasons, I don't
abuse you as long as you don't blame me and other code testing

supporters for every possible evil in the world, as has been done over and over in this newsgroup and elsewhere. I have this thing in perspective, apparently, you do not.

>> I have been personally blamed for everything

>"pro-coders," so why are you holding me accountable for what other
>"anti-coders" may have said to you? We're not talking to "pro-coders"
>or "anti-coders," Larry. I'm talking to you and you're talking to me.
> Lets not dump that other crap on either of us.

Dwight, please provide at least one example of where I've gratuitously "dumped" on you *without* provocation. The only thing that makes me "dump" on anyone is when they "dump" on me, the code testing requirements, or other pro-code test hams. You have done so many times. This is strictly a quid pro quo situation.

> By the way, and I've also said this before, I'm not "anti-code."
>I'm opposed to a code test requirement. As far as the use of code in
>the ham bands, I have absolutely no problem whatsoever with that. In
>fact, I might even play around with that mode myself one day.

Dwight, that's what all the NCTA's say. The problem with them is, "one day" never seems to come.

Ed:

I note that you don't support the testing requirements which have
historically led to the development of useful, practical communications
skills among radio amateurs. My intention is to keep our service
in a state of practical readiness as an emergency backup
communications system. Your intention just seems to be to
bring in anyone who has a fleeting interest, in the fervent hope that
maybe, someday, they may show some actual interest and perhaps
be willing to expend a trifling amount of effort to develop such
skills. I want a strong ARS, you seem to want a dumbed-down one.
Why is that?

You trash new hams because you are provoked by the fact that you think I don;t support testing requirements? That is a bit far-fetched even coming from you, Larry.

>Understanding with the "Part 15 users group" and we'll work this thing
>out and save vhf/uhf ham radio.

I don't think we will see such an MOU. As Amateur Radio's sharing partners seek to increase the power levels they are permitted under Part 15, the League has inevitably filed comments in opposition. Success has been mixed. However, the League has also worked effectively with several Part 15 groups, notably the VDSL folks, Home Phone Networking Alliance and HomePlug, of late, to help them develop frequency sharing standards that significantly reduce the likelihood of harmful interference.

>> I don't think any Service is eying the upper half of the 2.4 GHz band
>nowadays.

>It's only a matter of time.

I don't think so. That part of the band is heavily occupied, and its occupancy is expected to increase significantly, with Bluetooth and IEEE 802.11 devices, to name just a few. Hams are concerned that they will be blamed by their neighbors if they cause interference; others will feel the same concerns. At this stage, the Commmission really can't move the Part 15 users.

The only potential risk I see is that the Commision could deallocate that part of the band for Amateur Radio and give the Part 15 folks a bit more breathing room. Of course, that is only part of their problem -- that band is also ISM, so there are some pretty high-powered users in there.

>at night in between commercial AM stations.

The '756PRO has an excellent DSP implementation. Its filters skirts drop off like cliffs. One can park about 100 Hz away from another CW station and hear ONLY its keying sidebands. At first, users thought the DSP was creating the key clicks, but the ARRL Lab determined that they are really there. Of course, if the transmitted signal were generated with an SDR, it could use a raised sine shaping and not have audible key clicks 2X the necessary bandwidth away. :-)

>ROM, RAM, and I/O all in one chip.

But they are not complete systems on the chip. They need a bunch of support
components. And the ROM is the toughest part.

PICs are the new wave for jobs like this. The basic Elecraft K2 has two PICs, a
microprocessor, a ROM, and some other related stuff. Most of the accessories
(noise blanker, antenna tuner, 100W PA) have their own on-board PICs, too.
Really slick design.

Can you download the manual and find out? When they say "all-mode" they usually
mean "it will work all of the modes we thought of, if you hook up the
appropriate external box(es)". They DON'T mean "plug in a $10 PS/2 keyboard and
work PSK31"
>

In ham gear? Show me one where there isn't a lot of analog stuff in front of
the ADC.

>After they are digitized, are they still RF signals?

When the incoming RF signal is converted to a digital stream, it's no longer
RF. The outgoing digital stream doesn't become RF until it goes through a DAC.

That would be, Dwight, if any "heat" were ever given out. I've never seen a thing here yet that is anything more than either half-way decent conversation, or attempts by weak-minded individuals to get their Tarzan calls out in the only place and manner they have to do so. I am certain your wife will have the intelligence and capability to decipher that kind of code.

If that were true, Larry, you would be advocating a governmental
regulation requiring all hams to have a functional amateur
radio station.

In an emergency situation, having operational equipment is much more important than having Morse code skill. What good is Morse code skill without a transceiver? What good is any ham radio knowledge or skill without operational equipment?

Any argument you can mount for a Morse code skill requirement can be used for an equipment requirement as well. Are you advocating an FCC regulation forcing hams to posses ham equipment? If not, how can you justify advocating an FCC regulation to force hams to possess Morse code skill?

Sounds interesting. I think I have an old book on telephone technology and
will have to look up line compensation techniques I would guess.

I think the sticking point right now is the A/D converters. The don't have
the range yet.

> forty years ago.

What you may have missed is that all of those filters work at relativity high RF frequencies. As time goes on we will see more of the DSP functions moving up from the audio band in to what was considered RF sections. This is, as I mentioned before, a limitation of the implementation of DSP, and not a fundamental limitation of DSP technology itself.

On 31 May 2001 01:54:35 GMT, N2EY says:

>
>The big question: WHY the lack of activity?
>

That's easy. Because the proliferation of cheap cell phone service has obviated the need for "Honey should I pick up milk?" autopatches. Beyond that single application, repeaters are boring "intercom radio", not ham radio. Except for Skywarn, they have little practical use anymore, as witness the overflowing tables of slightly used HT's at any hamfest.

>
>One possible reason: Too many repeaters!
>

Naw, that's just proof of "If we build it, they won't necessarily come."

N2EY wrote:
> But they are not complete systems on the chip. They need a bunch of support
> components. And the ROM is the toughest part.

Modern microcontrollers need little more than power and a XTAL. And what
do you mean by tough? Modern microcontrollers have on-chip FLASH EPROM.
Everytime there is a new version of software for my SCS PTC2e, I
download it and program it into the FLASH memory.

> PICs are the new wave for jobs like this.

Not for the Japanese manufacturers. They use more sophisticated micros.
PICs are aimed primarily at low-volume applications.

> Is that chip in the IC756PRO, or some other ham rig? Can a ham get the source
> code and an explanation of how it works, easily?

What does that have to do with anything? I believe ICOM, at least at
one time, standardized on Motorola micros. Most modern micros have
a way to hide the proprietary ROM code from prying eyes.

> >That's why they call it a single chip microcontroller.
>

> Sure. Not a "computer", a microcontroller, like I said.

We (Intel) started out by calling everything microcomputers. Then to differentiate between the 8080 and the 8048 product lines, we coined the terms "microprocessor" for a microcomputer that didn't have on-board ROM and "microcontroller" for a microcomputer that did have on-board ROM/EPROM. I know, Jim, I was in those meetings.

> ahhh - "they don't say which one". There's the rub.

Probably all I have to do is open the IC-706 and get the Motorola part number off the quad-flat-pack package. Why is that so important to you? You probably have no way to develop and debug code for that micro.

> Can you download the manual and find out?

Are you kidding? The shop manual for my IC-706 cost an arm and a leg.

> When they say "all-mode" they usually
> mean "it will work all of the modes we thought of, if you hook up the
> appropriate external box(es)". They DON'T mean "plug in a $10 PS/2 keyboard and
> work PSK31"

I was assuming it means, "plug in a dumb terminal and work PSK31". I just happen to have a dumb terminal made out of an 80C51, a keyboard, and an LCD alphanumeric display. Made it out of parts from my junkbox in about three days. So I don't really need a laptop. It sends out ASCII characters from a keyboard and displays received ASCII characters on the LCD display.

> >Every year, higher and higher frequency RF signals are being digitized.
>
> In ham gear? Show me one where there isn't a lot of analog stuff in front of
> the ADC.

Read it again, Jim. Every year, more and more of the RF functions are being done digitally. For a modern radio, the IF RF can be digitized and everything is digital from there on. We can digitize N MHz now. It will be 10N MHz before long and after than 100N Mhz.

I was involved in all this naming stuff at Intel. I went to work for them in 1977 as a microcomputer applications engineer. Here is the history of those names as I remember it.

The 8080 was first called a microcomputer. Then the 8048 was introduced and was also called a microcomputer. Intel's customers were confused. Which "microcomputer" should they buy? The 8080 and 8048 marketing/applications groups were separate at Intel so a committee was formed to solve the product line confusion problem. It was decided that since the 8080 was more like a computer's CPU than anything else, it would

be called a "microprocessor". Thus the 8085 and 8086 through Pentium
chips have been called microprocessors. We continued to call the 8048 a
"microcomputer" for awhile but later, in the name of better product
differentiation, decided to call it a "microcontroller" and later yet
an "embedded microcontroller" associated with the 80C51 and 80C196
product line.

Intel, and other large companies with lots of products, absolutely need
to be able to differentiate their products to keep customers from being
confused. They actually agonized over these names.

Considering that the Mason-Dixon line is the border between Pennsylvania and Maryland, all of Kentucky, part of Ohio, and much of West Virginia are south of the Mason-Dixon line. And Kentucky was already a state, not a territory, when the Civil War (or War between the States) erupted.

I've used all-DSP HF radios, I've run a Kachina on 40 & 20 cw. I own a
JRC NRD 545 rcvr (40-bit IF DSP). I wouldn't take either into a cw dx
contest which is the most technically demanding test of HF rcvr
performance. The Kachina is mediocre in every respect. The 545 defines
the current state of the art for <$5k DSP rcvrs and it's a very nice
radio, much better than the Kachina. But I'll tell ya what: When it
comes to selectivity both from the "nose" width and skirt shapes my 30
year old tube-based meatball Collins 75S-3B outperforms the 545 by a
wide margin and I can't count the number of contests I've wrung outta
that antique radio.

>>
Predictable perhaps. Defining the state of the art from the standpoint
of raw performance out on the bands where the rubber hits the road? No
way. DSP at this point in history has a LONG way to go before it
catches up with the front end and IF performance of analog
processsing. Maybe someday but all-DSP radios are a long way from
prime time so far.

Per previous they're already out there, the Kachina, the Ten-Tec
Pegasus and some others. They simply don't compete well with the
mostly-anaolg xcvrs no matter how ya cut it.
>
In any event DSP radios are not a "policy" issue, if the computer
science types enjoy working on xcvrs-in-a- Gateway so be it. The
policy issue is about the FCC "demanding" digitizing ham radio which
none of the above addresses. It's the digital HF modes thing which has
my attention.

> University.

I'm confused Jeffrey. Which of your conflicting stories is true, Jeffrey?

1) (May, 2001 version) You resided on Guam for a short time, and got a KH2 call;

or..

2) (May, 1996 version) You never left Hawaii, but "borrowed" the mailing
address of Dr. Perry at University of Guam, sorta like Deignan "borrowed"
your mailing address to get his KH6HZ callsign.

Being done by those who don't make grand pronouncements, of course. Look up the various calls and names of posters here and see who has articles - any kind of articles - published in QST and QEX. You'll find W1RFI, for sure. But not many others.

>>

It's a classic Catch-22. The disputed ground is not HF, either.

The most popular amateur VHF/UHF mode, by far, is analog voice FM. Nice audio, simple, and been around forever. It also sucks up many kHz of bandwidth for a single communications-quality channel. Double those kHz for repeater use. Top half of 2 meters is bandplanned into 135 FM voice frequencies, most of them repeater pairs, so you wind up with about 25 simplex and 55 repeater channels in 2 MHz. Maximum potential of 80 ham conversations in 2 MHz, and that's only true if nobody overdeviates into the next channel.

(I'm doing these numbers in my head, so I may be off by a few percent, but the big picture is the same).

Packet is mostly stuck at 1200 because it was designed to use the FM voice rigs. 9600 pushes that a bit, but not much. To do more requires new rigs....

FCC looks at all that, and then at other services begging for spectrum, and it becomes harder and harder to justify all of those amateur kHz.

SSB is actually pretty tough to beat for HF voice, because pushing communications quality real-time voice through 2 kHz or so via digital ain't all so easy when you have to deal with real-world HF propagation issues.

The Catch-22 is that if we don't go to more spectrum-efficient VHF/UHF modes, the FCC will
reallocate some VHF/UHF spectrum to push us that way. If we DO go to those modes, the FCC will take the spectrum because we won't need it anymore.

>Slight corrections: It's an 850 amp battery - I don't know the aH rating.

850 A battery? That's a horse of a different color.

A car/truck battery with an 850 A CCA rating is probably good for 40-60 AH or so, max. That's not very much in an emergency situation when the battery has to run a rig, tape recorder, TNC, lapper, etc., etc. If the whole shebang draws just 4 amps, you will have maybe 8-10 hours of operation before things go bad because of low voltage. Probably less.

Solar panels? They're fine if the sun shines enough to keep ahead of the electrical load. But they have to be sized right for the situation, and you have to allow for cloudy winter days. To keep pace with a load of, say, 20 AH per day requires a pretty big panel - rough guess would be a 5-6 amp size where Cecil lives. Note that the battery is not 100% efficient - you have to put in more than you get out.

--

I used to be responsible for large numbers of backup batteries. 80 AH was about the smallest we ever used. Ever see a 120 volt bank of 420 AH lead-acid cells? That's a backup battery! But it's not very portable.

I live in a reasonably large metropolitan area (Mpls/St.Paul, MN).
Every 2M/70CM repeater channel pair in the bandplan is spoken for -- every
one! Yet you can put a scanning rig on 2M or 440 and it will "cycle" for hours
on end without hitting a busy frequency. I'd hate to be the guy charged
with defending those allocations based on usage! At best I'd guess we
could reserve some small sliver for Skywarn and similar contingencies.

Nope! It was "The War of Northern Aggression"

```

If I were "the Colonel", I'd be checking my perimeter integrity.....

Washington, D.C. � The Federal Communications Commission (FCC) announced that an investigation by the FCC�s Enforcement Bureau led to the arrest of Mr. Ibar (Robert) Mohamed for operating an unlicensed FM radio station on 89.3 MHz in Queens, NY and Brooklyn, NY. The United States Marshals Service arrested Mr. Mohamed on May 22, 2001, working in conjunction with FCC Agents and the Office of the United States Attorney for the Eastern District of New York.

Prior FCC enforcement actions had failed to deter Mr. Mohamed�s unlicensed operation of the FM station. The FCC, on more than one occasion, had issued notices to Mr. Mohamed directing him to cease operation of the unlicensed station. Further, the U.S. Marshal�s Service, in conjunction with the United States Attorney�s Office and the FCC, had seized his radio equipment on two previous occasions.

Could it be that after all the years of using analog rigs that now you can
use them to best advantage by gut feel? The characteristic of a DSP rig will
be different, filters will have shape factors more like the ideal type etc.

I would suspect that what you get now with some DSP rigs as far as performance is not really a limitation of DSP but a limitation of the implementation. As experience grows the core DSP code can be modified to suit the preferences of an individual operator while improving performance. I think this is much like the tube v.s. solid state audio amplifier issue. The solid states amps can be shown to be cleaner, but people still preffer the sound of the old tube amps in some cases.

> Predictable perhaps. Defining the state of the art from the standpoint
> of raw performance out on the bands where the rubber hits the road? No

> prime time so far.

I would agree that an all DSP based rig is a way off. I do see however that the rate of evolution will be faster for the DSP based rigs than for the analog based designs. It would take an experimenter far less time to design new DSP algorithms and code them than let say design a new rig from the PCB level up along with the problems of getting the required analog components, test equipment and debuging the design.

> Per previous they're already out there, the Kachina, the Ten-Tec

Not yet, but they are still evolving. I don't know many people who will complain that the old 33 1/3 RPM LP records and 8-track tapes sound better than the current digital CD's do for example.

> In any event DSP radios are not a "policy" issue, if the computer
> science types enjoy working on xcvrs-in-a- Gateway so be it. The
> policy issue is about the FCC "demanding" digitizing ham radio which
> none of the above addresses.

I think it does. No the FCC is not "demanding" digitizing ham radio, but they sure are telling us in what direction we should be moving in. At some point I would not be a bit surprised that we will have to "justify" our continued use of the bands by what we do in the way of DSP radio design. Just consider the old arguments used here why the Morse Code testing should remain. One of the "typical" replies why is to maintain a pool of trained CW operators, well it seems the FCC is shifting gears and wants a pool of trained operators who know something about modern DSP technology now instead. That I think is a shift in the FCC's policy which needs to be addressed here.

> It's the digital HF modes thing which has my attention.

I'm sure that DSP technology will have a lot to offer in that area too.

In the case that caused it to be named that, there was apparently no overt attempt at brainwashing. It was named after a Stockholm bank robbery in 1973 during which a bank employee became romantically attached to a robber who held her hostage.

N2EY wrote:

> A car/truck battery with an 850 A CCA rating is probably good for 40-60 AH or so, max. That's not very much in an emergency situation when the battery has to run a rig, tape recorder, TNC, lapper, etc., etc. If the whole shebang draws just 4 amps, you will have maybe 8-10 hours of operation before things go bad because of low voltage. Probably less.

I have a spare fully charged battery and of course, I don't have to run all my peripherals all the time, plus I have 300 watts of solar charging power while the sun is overhead. I just wish that was enough to run the air-conditioning. :-)

I thought it was "The Damned Yankee War".

Probably related a lot to our "vocational personality" -- There's a
neat site on the web at www.cmi-lmi.com/kingdomality.html which gives
you a profile of "how you get things done" -- it told me this: (Just call me
"Prime Minister, Sir" from now on!)

"Your distinct personality, The Prime Minister might be found in most of the thriving kingdoms of the time. You are a strategist who pursues the most efficient and logical path toward the realization of the goal that you perceive or visualize. You will often only associate with those people who can assist you in the implementation of your plan. Inept assistants may be immediately discarded as excess baggage. To do otherwise could be inefficient and illogical. On the positive side, you can be rationally idealistic and analytically ideological. You can be a bold decision maker and risk taker who can move society ahead by years instead of minutes. On the negative side, you may be unmerciful, impatient, impetuous and impulsive. Interestingly, your preference is just as applicable in today's corporate kingdoms."

If that's wrong, which radio service is co-channeled in the 49MHz band with the phones?

You did not cite the case, but I can only guess from your statement that this was a case about the DIVULGING of the content of the cordless phone communication. Nowhere did I say that one could do that, nor was that part of the original post (as I remember it). It asked about interception; nothing more.

As far as the ECPA goes, didn't I paraphrase exactly the "interception exception" - determination of interference? When I said, "the duty being to identify the source of the interference," you make it sound as if I were saying something different than what the law permits. Please explain why you're raising this point in "apparent disagreement" when in fact the text of our messages fully agree.

Cecil, the question is: What time advantage do you realize by
taping formal message traffic at 200 wpm then having to rewind
and play the tape, stopping it periodically to transcribe the text?

20 wpm CW and a mill will provide a typed copy the first time.

KH6O

I write as fast as I can to start with, Jeff. What I miss, I fill in the blanks with the tape. I write down only the important information. If someone says, "We need help fast or someone is going to die.", I fully understand that without writing it down.

You emergency traffic jocks have no idea what a real emergency is like. By the time you get every single character 100% correct at 20wpm, it's too late. The CW operation was a success but the patient died.

No doubt.

>Prior FCC enforcement actions had failed to deter Mr. Mohamed’s >unlicensed operation of the FM station.

I seriously doubt that Mr. Mohamed was a proactive rump militiaman, sitting on a defendable perimeter with some assortment of firearms.

>Further, the U.S. Marshal’s Service, in conjunction with the United
>States Attorney’s Office and the FCC, had seized his radio equipment >on two previous occasions.

How much you want to bet it takes more than a "knock-knock" warrant and the flashing of a couple badges to get "The Colonel's" gear away from HIM...?!?!

Any of which is pertinent for WHAT reason...?!?! I find it interesting that you take the opportunity to chastise me (and others) publically for pursuing what YOU consider to be irrelevant topics, but then YOU set out on your own missions of harrassment.

Pot/kettle/black

Jeff was legally assigned the callsign.

He has not attempted to mislead anyone as to his CURRENT location.

Present FCC regulations allow the "portability" of an FCC issued callsign, regardless of the current legal domicile of the holder.

Everything else is a troll for a fight on YOUR part. NO ONE cares how Jeff got his callsign any more than we care how you got yours.

Now take an extra hit of your Geritol and go on back and regale Mrs Brokesnob with your tales of your Newsgroup Warfare Hero status.

Putz.

PS..."K0HB" e mails get deleted without reading. Leave it here, chump.

That's how I understood the comments as well, Bill.  Requiring
a concensus from the amateur community before adopting any changes
to the regs is a very prudent approach, and more or less assures
that they won't have to be tampering with anything anytime soon.
The ARS is about as concensus building as is this newsgroup.

That's correct; and, furthermore, that's where the sympathy of most Marylanders was during the second war for independence which was fought on American soil.

Lincoln even (illegally, needless to say) imprisoned the entire Maryland legislature at Fort McHenry because he rightly feared that they would exercise their rights and vote to join the Confederacy.

With every good wish,

Kevin, WB4AIO.

Noop, the tendency to distort and obliterate higher frequencies more than lower ones. Remote broadcasts tended to be a little bassy unless our heroic engineer did his anti-twist thing. Also remember that phone lines in those days were hi-tech if they weren't stapled to fence posts.

  And the mobile unit inside that "circle" gets it down to the
  antenna.

Parkinson defined the prime minister as the one who does not know anything
about Economics and therefore cannot be Chancellor of the Exchequer, knows
nothing about Defense, Law, or much of anything else but must be in the
government.  Prime Minister is the only job left.

Sec. 95.631  Emission types.
    (c) A CB transmitter may transmit only emission types A1D, H1D, J1D,
R1D, A3E, H3E, J3E, R3E. A non-voice emission is limited to selective
calling or tone-operated squelch tones to establish or continue voice
communications. See Sec. 95.412 (b) and (c).
    (e) No GMRS or CB transmitter shall employ a digital modulation or
emission.
    (f) No GMRS, CB or R/C transmitter shall transmit non-voice data.

Again, logic dictates that to prove a proposition false, we only
need to present one case in which it fails; that single false case
is enough to nullify the proposition. So there.    KH6o:=

You look at the "DSP" M5 Leland, the big guns customairily install
three pairs of cascaded INRAD cryatal filters in the Mark 5 at $155 a
pop. Or Collins mechanical filters. Same filters I had in my 75A4
forty years ago.

No, that's just the processor. A computer needs lots of other stuff to be
useful. Ask John von Neumann.

>The IC-756PRO's computer has enough MIPs to perform
>FSK and PSK31 encoding/decoding.

Maybe - but are those functions implemented in the IC-756PRO, so that you don't
need any external boxes to work PSK31, or PACTOR, or even plain old Baudot
RTTY? Nope.

Are they implemented in ANY "commercial" amateur rig?

> The time is coming when virtually

>all the functions in a transceiver will be performed by the built
>in computer.

Not the really important ones, though. Like dealing with the actual RF signals.

>I know that chaps your posterior but progress happens.

When they can do better than 130 dB blocking dynamic range, and all of the other things the good "analog" HF sets have been doing for decades, maybe.

-

When I was a kid they told us that flat screen TVs that you could hang on a wall like a picture were "just around the corner". Nuclear power was going to make electricity "too cheap to meter". And we'd all ride to work in 400 mph George Jetson autogyros. I'm still waiting.

I did not say, out-of-the-box CW is not possible.
I said, "you can't work CW out of 'the' box", which means I get to
choose the box, Jeff. I didn't say out of "any" box. I said out
of "the" box which obviously indicates that I had "the" appropriate
single box in mind when I said it. So to prove me wrong, you must
be able to work CW out of *ALL* boxes including the one I choose.
You lose.

Generically, they are computers. Probably, most of them are general purpose
devices except for the ROM programming. Most microcontrollers contain CPU,
ROM, RAM, and I/O all in one chip.

> >A computer is a jellybean chip anymore, no larger than your
> >pinkynail.
>

Beg to differ. The 80C51 single chip computer contains CPU, ROM, RAM, and I/O.
That's why they call it a single chip microcontroller. Single chip devices
reduce parts count and cost, ideal for low-cost transceivers. My IC-706
uses a 64-pin single-chip microcontroller. They don't say which one but
I'll bet it's a Motorola general purpose 68xx/68xxx device with ICOM's
special ROM code.

I don't know for sure but ICOM advertises "all-mode, including PSK31"
and "RTTY demodulator". I'm considering buying one.

Every year, higher and higher frequency RF signals are being digitized.
After they are digitized, are they still RF signals?

--
cheers, Cecil

>Are you looking for writers, or are you looking for experimenters?

Looking for experimenters who write about it. If somebody does something new but doesn't tell anyone about it, it has no practical effect. If somebody writes about the theoretical possibilities but doesn't actually build them, it's just talk.

Think of G3PLX. Comes up with a new idea that turned into PSK31. Gathers a bunch of folks around the world to help him test and develop the mode. Then GIVES IT AWAY to the amateur community. Pretty soon we have articles in the amateur press out the yingyang, websites with free downloads, demos at club meetings and hamfests, Small Wonder making $40 rig kits that plug into a lapper.

That's a real ham and real ham radio, right there. That's how it's done.

The big question: WHY the lack of activity? One possible reason: Too many repeaters!

Note that 220 gets ignored.

OK. Concrete is the "better" surface, but of course it costs more and takes
longer to put down.

Actually, she pays for the road wear in the form of taxes on the fuel burned in
the car. Although trucks pay extra taxes, they do not begin to pay for the
damage they do to the road, nor the extra cost incurred to make the highway
suitable for big trucks. The trucking is essentially subsidized by motor
vehicle fuel taxes.

Yup. Here we can put almost anything on a car. Here in PA, we have annual
inspections (safety and emissions). Some states don't.

>> Crazy. On the one hand they are wild for safety,

Agreed. I note wide regional variations. Boston and Washington DC are the
worst. Philly and NYC are much better.
>
>> The police around here are very friendly, too,
>> if you treat them with the proper respect.

You described it perfectly. That IS different!

>> GREAT story, Dwight. Thanks for sharing it.

> Actually, not such a great story. My wife read it and is now
>talking about another trip overseas. She always did love christmas there.

You shot yourself in the foot on that one! I can understand why she loved
Christmas there - I was humming "O Tannenbaum" by the time I got to the end of
that post of yours, and I've never been there!
>

Thanks for the good info. Reply when you feel like it/get the time - no hurry.

Here's a bit of information from the NHTSA on PA's traffic deaths:

1994: 109 deaths on PA highways. 1999: 134 deaths on those same highways. About a 30% increase. Biggest change in that time: Speed limit ent from 55 to 65 on some of the roads. Cause and effect? Maybe.

If hams can share bands with other services, why can't hams share the
CB band?

Godwin's Law: "As a Usenet discussion grows longer, the probability of a comparison involving Nazis or Hitler approaches one."

There is a tradition in many groups that, once this occurs, that thread is over, and whoever mentioned the Nazis has automatically lost whatever argument was in progress. Godwin's Law thus practically guarantees the existence of an upper bound on thread length in those groups.

Kinda like the word 'destinated', I guess. :-)

It wasn't so much Hanoi Jane, who only acted the part in the movie, as much as San Francisco's Bechtel, the designer of Rancho Seco, a twin to Three Mile Island - my wife worked for Bechtel on instrumenmtation of those plants' successors' design at the time - who wanted so much $$$ (that SMUD didn't have) to "upgrade" the facility after the TMI scare that SMUD shut the whole business down and bought power from "elsewhere".

Not quite...

I was "there" at the First Annual Computers, Freedom, and Privacy
Conference in San Francisco (1990) when Mike Godwin (general counsel
of the Electronic Freedom Foundation) came out with the original
version of "Godwin's Law":

> "When Stormtroopers, Hitler, or Nazis are brought up on Usenet,
> the thread is over...".

We all grinned and nodded in agreement.

I'll bet the toy walkie-talkies are FCC part 15 type accepted and not part 95. There is a big difference. You can send just about anything on a part 15 radio.

To quote part 95:
Rule 12 - Permitted Communications

{A} You may use your CB station to transmit two-way plain language communications. Two-way plain language communications are communications without codes or coded messages. Operating signals such as "ten codes" (10-4, etc.) are not considered codes or coded messages. You may transmit two-way plain language communications only to other CB stations, to units of your own CB station, or to authorized government stations on CB frequencies about-

[1] Your personal or business activities, or those of members of your immediate family living in your household;
[2] Emergencies;
[3] Traveler assistance;
[4] Civil Defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the Civil Defense Agency with authority over the area in which your station is located.

{B} You may use your CB station to transmit a TONE SIGNAL only when the signal is used to make contact, or to continue communications (Examples: tone operated squelch, selective calling circuits). If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking.

{C} You may use your CB station to transmit one-way communications (messages not intended for two or more CB stations) only for emergency communications, traveler assistance, brief tests (radio checks) or voice paging.

I have been looking over some web sites trying to find exactly where the new
wireless digital cameras are going to operate. I have only seen 2.4 GHz,
but am not sure exactly where and if it is inside the amateur band (likely,

very likely). We can, today, go and plunk our money down and buy gear that would have seemed like out of a sci-fi picture to hams back in the 60s. We have even been seeing commercial units for 1.2 GHz for a while. Also, there are places selling ATV equipment, but for the most part, until we generate some kind of activity on any given band, manufacturers are not likely to produce equipment for that band. Sigh ... and here I am excited about finally buying a decent rig and getting back on HF. That sure doesn't help anything at all, does it? I know the wireless cameras are going to be low range units (at first) where you can walk up near a machine in a store and transfer your pictures in a matter of seconds (I think the transfer rate is something like 20 Mb). Later, these will have high-speed wireless direct connects to the web (or some kind of a provider - perhaps dedicated to this use only, I don't know). Those will not, of course, be low power and limited range. Between our pagers, cellphones, wireless cameras, high-speed wireless internet, and who knows what else, we're going to have a real crunch on microwave spectrum. Again, I'd like to know where the digital wireless cameras are going to be. Other than that, I've just got to go up into the attic and try and find where I put the old sideswiper (collecting dust since 1966)!

73,
Jim Hampton AA2QA

As I understand them, Dick and Larry would say that's bad.
What do you say, Hans?

There is something delicious about envisoning this cast of characters
backpacking:

Larry, in his lederhosen, wandering thru the woods singing Stout Hearted Men
in his best Nelson Eddy voice.

Cecil walking the Texas Hill Country doing some sort of Kinky Friedman imitation while rolling a joint.

Jim, N2EY, singing Springtime for Hitler virtually anywhere.

Dick strolling thru the Ozarks doing Groucho Marx classic 'I'm Against It'.

Me, I will galumph thru Nebraska's Bohemian Alps singing the Bastard King of England to the cows.

Sorry, a brainfart I know, but far too much fun to pass up.

Dick N�BK

  While I'm using Netscape's integrated newsreader to view the
newsgroups, I probably should clarify that - I wish "newsreader"
makers would offer an option to have quoted text one width and text
written by me another width.

Boy, that sounds familiar. I've had a few ISP's that were almost that bad (33.6k was the slowest with a v90 modem). However, I've also had a few that were excellent, and they only made the others look even worse.

There is nothing really wrong with the speed of this server provider. I consistently get about 48k, with the rare 42k thrown in. However, they do have a problem keeping things working. If internet access isn't down, email is. And the newsgroups seem to be on the bottom of their list of things to keep working.

However, every so often, they do get everything working correctly and it is a real pleasure. It is those times that has so far prevented me from simply giving up and really looking for an alternative.

Thanks again for the info, Dick.

Phil:

Exactly. I copy the quoted text from the reply window of AOL's so-called "browser," paste it to MS-Word '97, edit my reply, and copy/ paste back to the browser reply window. I can do the process a coupla times in the time it would take to read the last sentence aloud at normal speed (minus the editing time). This way, I get the benefits of a full-featured word processor, without any of the restrictions of something called a "browser." My posts always seem to look OK on the NG, so I must be doing something right!

Cecil:

I guess that in a perfect world, every licensed radio amateur would have a functional station. Unfortunately, this is not the case, and due to the fact that it would, indeed, be excessive government regulation to actually "require" a licensed ham to have a specific minimal station, I do not support such an idea. I justify an FCC regulation requiring hams to possess Morse code skill because I consider this to be an essential skill for people *expected* to

set up and effectively employ emergency radio communications
stations. How do you justify the FAA "forcing" pilots to learn and
understand the FAR's? Should one be "forced" to own an airplane
just because he/she has a pilot's license?

Hansl:

OK, so existing hams are taking advantage of the "grandfathering"
of their min. 5 WPM code testing, while, at the same time, hardly
any new hams are entering the service! If, by this time, the
Technician class had *gained* 25 - 30% in addition to the gains in
General/Extra through upgrading the grandfathered, I'd be perfectly
happy to admit I was wrong all along and declare Restructuring an
enormous success! Unfortunately, right now it is squarely in the
"dismal failure" category!

Cecil:

It most certainly is bad! Most of the gains in the General and Extra classes came about as a result of pre-Restructuring licensees who had passed at least a 5 WPM code test taking advantage of grandfathering. Will those same percentage increases continue in successive years, as a result of NEW licensees coming onboard? Keep in mind, in the first year of the post-Restructuring Era, we only gained about four thousand new licensees. Where is this mass influx of bright, young, computer-literate, technical talent we were promised after the shackles of "high-speed" code testing had been lifted? And of the few we've gained so far, where are they on the digital modes? Since last August, I've only worked one ham on PSK31 who had been newly-licensed since April, '00. Where's our progress as promised?

That is an idea. I had considered it once before, but decided against it because it was almost impossible to get my computer set up for two different internet accounts. However, that is much easier today, so I may have to seriously consider that again.

You have that right. Many people need something to make themselves feel superior. For Larry, I guess it is the ARS licensing system.

Well, at least you are up to "hardly any" to "precipitous drop." :-)

>Unfortunately, right now it is squarely in the
>"dismal failure" category!

Let's see, 4000 more hams than we had a few years ago; the slight decline in our numbers has turned into a slight increase, many hams are studying and passing exams... not what I would call a "dismal failure," Larry.

Good point. All that Part 15 stuff in "our" bands can be used by US, and we can add amplifiers and antennas and have a ball! Just have to watch out on 2.4 GHz -- the Part 15 band extends above our allocation.

We

Then you understand exactly how some of us feel about the Morse code
requirement. It would make more sense for hams to be required to
have an emergency transceiver than it does for hams to be required
to know Morse code.

> How do you justify the FAA "forcing" pilots to learn and

Yeah, but in Larry's case, he sees the miniskirt and the effect of no bra and goes after everybody in the room. But it okay, because one of them "provoked" him...

Web browsing is no problem with two accounts. Netscape can be set up
for multiple news-servers. The only problem is email. So I use Netscape
for one email account and Eudora for the other.

Hey all,
The Atlanta Radio Club's annual Hamfest is Saturday June 2nd. 9:00 Am to 3 PM.
It will be at the Jim R. MiIller Park in Marietta Ga. Talk-in 146.82
Admission is $5 , under 16 free.
No matter if you're looking for a new rig ,a used rig,want to swap rigs.Maybe your looking for antenna supplies: wire,insulators,mast, towers,etc. It's there.
Maybe your looking to unload all those extra radios in your shack,this is you chance. Ham gear,Shortwave radios,scanners, books,its all there.
Don't forget the computers,monitors,software,components.
Don't forget to dig through the Boneyard/Tailgate/Flea Market Areas.
If you live anywhere near Atlanta ,and love the radio hobbies,you will not want to miss this.

Sponsored by: The Atlanta Radio Club
Gwinnett Amateur Radio Society
Paulding Amateur Radio Club
and the ARRL.

More info at http://www.saf.com/arc/atlfest.htm

Simple Directions: Take I-75 north of Atlanta to Windy Hill.

Go west on Windy Hill to Austell Rd.

Go to your left on Austell Rd a short distance,look
for Callaway Rd on you right.

Turn right on Callaway Rd. and travel about 1 mile

Jim Miller Park will be on your right.

See You there.

Dean
KR4IU

Of course you're not going to quibble with me over the difference -
that difference doesn't support your position.

> I don't "welcome" anyone into a place
> where they have, IMHO, a perfectly
> obvious right to be! With or without
> my "invitation," your XYL can post here
> as she pleases -- as long as she is
> willing to take the heat once having
> stepped into the kitchen!

Both Kim, and Cecil, answered that so well, I'll just let their responses serve as my own.

> Dwight, you couldn't be more wrong
> about this. If I can find anyone
> who can make a logical, convincing
> argument *against* code testing,
> one which convinces me that I was
> wrong and that they are right, I
> would certainly not "abuse" them in
> any way! [snip]

Since you're setting the standard here, can you offer a single example of an argument against code testing that would meet your requirements? I, and many others, would like to discuss the code testing issue without "abuse" from you. Therefore, an example that would help us avoid that would be really helpful.

> Dwight, please provide at least one
> example of where I've gratuitously
> "dumped" on you *without* provocation.
> The only thing that makes me "dump"
> on anyone is when they "dump" on me,
> the code testing requirements, or
> other pro-code test hams.

Larry, answer my question first - show me where _I_ have ever blamed you for global warming, ethnic cleansing, the downfall of the ARS, and so forth. Show me where _I_ have held you accountable for the things said by other "pro-coders." So, again, why are you holding me accountable for what others may have said to you?

Now, to answer your question. Since you consider any comment against code testing to be a provocation, I'm sure in your mind you have never "dumped on me without provocation." However, no reasonable person would consider a comment against code testing to be justification, or provocation, for the name calling and character assassination that is commonplace in your messages. And, no, I will not repeat, and further spread, your name calling and character assassination to provide you with examples (use google.com if your memory is that poor).

> The only thing that makes me "dump"
> on anyone is when they "dump" on me,
> the code testing requirements, or other
> pro-code test hams. You have done so
> many times. This is strictly a quid
> pro quo situation.

And, again, I repeat the same question - show me where _I_ have ever blamed you for global warming, ethnic cleansing, the downfall of the ARS, and so forth. Show me where _I_ have held you accountable for the things said by other "pro-coders." So, once again, why are you holding me accountable for what others may have said to you?

I have not "dumped" on you (called you names or attacked your character) for anything you have ever said about code testing, so please stop "dumping" on me for what I say about code testing. Again, my comments about code testing do not justify the name calling and character assassination in your messages.

Is it free or do you have to buy it?
>
>> PICs are the new wave for jobs like this.
>
>Not for the Japanese manufacturers. They use more sophisticated micros.
>PICs are aimed primarily at low-volume applications.

Ham gear is a low-volume application. How many IC-756PROs will ICOM make over the product's lifetime?
>
>> Is that chip in the IC756PRO, or some other ham rig? Can a ham get the
>source
>> code and an explanation of how it works, easily?
>
>What does that have to do with anything?

It has to do with the ability to experiment, modify, repair, or simply fool around with one's rig. The whole point of having the control logic in software instead of hard-wired is to be able to change it easily if desired - and change it back if the new idea doesn't work so well.

>I believe ICOM, at least at
>one time, standardized on Motorola micros.

Doesn't mean they stayed that way.

>Most modern micros have
>a way to hide the proprietary ROM code from prying eyes.

Which means those who would experiment are out of luck.
>
>> ahhh - "they don't say which one". There's the rub.
>
>Probably all I have to do is open the IC-706 and get the Motorola part
>number off the quad-flat-pack package.

Maybe. Or maybe it's a custom part that only Icom has.

>Why is that so important to you?

It's not. I've never owned a "Yaecomwood". I'm just pointing out that the
control systems of many rigs are not readily accessible to hams.

>You probably have no way to develop and debug code for that micro.

If it's a proprietary part, probably not. Where I work, though, one of our
mottoes is "Burn 'em if ya got 'em" (referring to EPROMS).
>
>> Can you download the manual and find out?
>
>Are you kidding? The shop manual for my IC-706 cost an arm and a leg.

You just proved my point.
>

>and
>> work PSK31"
>
>I was assuming it means, "plug in a dumb terminal and work PSK31".

You assume wrong. Read the review. It needs at least a lapper with a soundcard
plus the PSK31 software.

Oddly enough, the IC-756PRO will receive RTTY directly - 45 bps Baudot RTTY,
that is. It will also display it on a two-line part of the screen. But it will
only receive - transmiiting requires an outside source! If you want other than
45 bps Baudot, you gotta hook up a smart box or two.

>I
>just happen to have a dumb terminal made out of an 80C51, a keyboard,
>and an LCD alphanumeric display. Made it out of parts from my junkbox
>in about three days. So I don't really need a laptop. It sends out
>ASCII characters from a keyboard and displays received ASCII characters
>on the LCD display.

Sorry - you need more than that to use ANY RTTY/TOR mode on the IC-756PRO.
Unless my info is faulty.
>
>> >Every year, higher and higher frequency RF signals are being digitized.

>> the ADC.
>
>Read it again, Jim. Every year, more and more of the RF functions are
>being done digitally.

Sure - but the analog stuff is still needed. Lots of it.

>For a modern radio, the IF RF can be digitized
>and everything is digital from there on.

Maybe. You still need to convert back to analog for the audio if you want to listen to the dern thing.

>We can digitize N MHz now.
>It will be 10N MHz before long and after than 100N Mhz.

How long is "before long"? Who is "we"?

Speed isn't the only issue. Dynamic range is a biggie, too. You gotta beat 130 db blocking dynamic range to even be in the game, compared to "analog" designs.

Consider the IC-756PRO. Some really whizzy filter features, due to the IF DSP. Neato control system and LCD screen. Lots of goodies.

It also lists at $3600, which translates to a "street price" of $2800-3000. Most hams are not going to rush out and buy one.

Yet many of the '756PROs "basic radio" performance parameters, like MDS, blocking dynamic range, third- and second-order intercept, and IMD dynamic range, are inferior to those of a popular under-$600 rig that has no DSP. Go figure. The venerable IC-765, to name just one rig from the same manufacturer, also beats the 756PRO in these areas.

The end result is that these new rigs offer a mixed bag of tradeoffs - at a high price. New modes? You still gotta buy or build an external box.

Perhaps their priorities are stations that might interfere with business enterprises over shortwave pirates who wouldn't be heard by many people and would most likely only interfere with foreign signals. Just a thought.

That sounds like a good thing to me.

>>Most modern micros have a way to hide the proprietary ROM code from prying
>> eyes.

>Which means those who would experiment are out of luck.

All the more reason to roll our own. :-)

>I'm just pointing out that the control systems of many rigs are not readily
> accessible to hams.

If most hams demanded it, it would be.

>Sorry - you need more than that to use ANY RTTY/TOR mode on the IC-756PRO.
>Unless my info is faulty.

How long do you think it will be before all you need hook up is a keyboard?

>>Read it again, Jim. Every year, more and more of the RF functions are
>>being done digitally.

>Sure - but the analog stuff is still needed. Lots of it.

How long before that changes? The SDR folks are talking about antenna-to-DSP. It can already be done at up to about 10 MHz.

>Maybe. You still need to convert back to analog for the audio if you want to
>listen to the dern thing.

Okay. For what it's worth.

>Yet many of the '756PROs "basic radio" performance parameters, like MDS,

>blocking dynamic range, third- and second-order intercept, and IMD dynamic
>range, are inferior to those of a popular under-$600 rig that has no DSP. Go
>figure.

The same comparison can be made for multikilobux radios that have no DSP, too.
That little radio you talk about has DR that hangs in there with the big boys.
At 5 kHz spacing, last time I looked, it beats them all.

>The end result is that these new rigs offer a mixed bag of tradeoffs - at a
>high price. New modes? You still gotta buy or build an external box.

How long before that changes? Your statement is not true for the DSP-10 right
now.

And I bet your wife is not *only* too much of a proper lady but also has way
far more intelligence than to even be affected by anything Larry has to say.
One must consider the source, then all of it comes into perspective. :)

That's why I like my 775DSP so well. I can accept the "factory defaults", or with just a few keystrokes I can literally hand-tailor the receive and transmit characteristics of the rig to suit my needs of the moment. Modify filters, modify transmit audio, choose between electronic balanced mixer/filter SSB generation or software-based phasing generation, etc., etc., etc. Much of this can be done from the front panel, and even more by just plugging a dumb-terminal into the control port.

>It's not. I've never owned a "Yaecomwood". I'm just pointing out that the
>control systems of many rigs are not readily accessible to hams.

Since my first "computerized" rig (Heath SS-9000), I found the control schemes to be easily obtained (if not already published in the users manual) and readily accessible.

Any.  Point is, what if you were the one who inadvertantly triggered their
radar detector by making a normal radio transmission?  Would you feel
responsible for their driving off the road?  Somehow I doubt it.

Frankford Radio Club meeting a couple years ago when the 756 first hit
the shelves. Big time heavy-bore dx contest club, one of the best
known clubs in the dx & contesting world. 165 active members, lotta
deep pockets, these people know what's up when ya talk radio
performance.
>
One of the members works for HRO in Wilmington, he demonstrated a 756,
buncha guys bought 756s. They found out that the 756 has some
disappointing qualities when in real combat on the bands. Front end
and selectivity issues.
>
Time passes, So here he comes again with some latest and greatest
minimal-DSP FT-1000 series box or another.
>
"Hey, wasn't it you who was just in here hyping the 756?!"
>
HRO guy: I'm tellin ya, try this FT-1000 . .
>
A few guys tryed it, passed the word around. All of a sudden the HRO
guy found himself buried in 756s which had gotten traded in for
FT-1000s.

>
And that was before the Mark V came out. The 756 is over.
>
There ain't gonna be any new digital modes which which are not PC
based from the gitgo so why the hell would you wanna run 'em from
inside a general-purpose HF xcvr? The radio won't be anything more
than the modem. Next week another mode pops up and the radio is the
same modem again.

Not by people empowered to make that promise, Dick. If one chooses to take someone's empty promise, they are either a fool or a liar. Did you really believe that promise when you heard it?

What if they haven't gone on to other things in ham radio, Dick? Isn't talking to schoolkids good enough? Maybe talking to schoolkids is all the time they have to spare in their busy everyday lives. Why must all nocode techs be labeled underachievers? If being nocode techs satisfies all their ham radio needs, what exactly is wrong with that?

Dick, you are such a liar. I said I don't see how it could be done without an analog front end. Why don't you learn to read so you don't have to lie?

Now you are lying to try to get out of your corner. I have never, never said anything about "from the antenna DSP". I'm the guy who said I don't believe "from the antenna DSP" is possible. If you want to redeem yourself, Dick, please produce the posting where I said it could be done. If you can't, please tattoo "liar" on your forehead.

> Well DO TELL!!! So digital isn't all it's cracked up to be, after all!

Yes it is, Dick, digital is *exactly* what it's cracked up to be. The state-of-the-art in DSP is advancing by leaps and bounds as we speak.

> So much for "wall to wall, antenna to speaker" DSP.

Stop lying about what I said. In fact, please stop lying at all. How can you bring yourself to lie in front of God and the whole world when Google can prove you are lying?
--
cheers, Cecil

That wasn't the only problem, Larry. Another problem is that hams like you turned the ARS into their own private caste system.

>A rather unrealistic test scenario if you can't look back
>over your text and fillin or make corrections.

You obviously never took a timed test in a public school then, Bill. And that was exactly the way the (Morse) test was administered to me.

>If I had
>written the word ADVAN_ED and couldn't then fill in
>the missed letter C, how is that any valid capability test?

If the requirement was "One Minute Solid Copy" and that missing character meant you DIDN'T copy that "c" IN that one minute, you failed.

If you go back after the fact and enter it, then it was "One Minute Plus Whatever I Did After Time Was Called"

This is how some of Gordo West's students get by. He teaches them to copy the "dots and dashes" as characters, then go back AFTER the test and match the character to the letter.

That's NOT a "legitimate" test.

>A missed number
>is, of course, at best a 10/1 guess, but many words are
>absolutely recognizable with just a missing letter...even
>without the wording prior to and after that word.

Then you need to be situationally aware of the time, and if there's any doubts, fill in the blanks before the bell is rung.

Jeff says:

>>> I wrote this some time ago, ...
>>> At present, there is only one mode all the world's
>>> HF-licensed amateurs hold in common: CW.

Hans says:

>>Gee, Jeffrey, living in easy communications distance
>>from Japan, I'd have thought you knew better. There
>>are hundreds of thousands of JA hams who have HF
>>operator licenses but have never passed a Morse
>>examination.

Jeff says:

>Oh, you mean Japan's 4th Class (also called Telephone Class) license?
>The one where power is not to exceed 10 watts, and the operators don't
>have 30, 20, or 17 meter privileges? Gee, Hans, even our CBers can
>legally run more than 10W on SSB!

Jeffrey -- you said "all the world's HF-licensed amateurs" have CW as a common mode.

In fact more than half of the "HF-licensed" hams in the world have never taken a Morse exam and aren't even allowed to *USE* Morse Code. That makes your assertion wildly innacurate, to the point of laughable. So what else is new?

I'm sure you've seen my earlier response to this one.  It is quite
possible to do well in one field and to be an under achiever in another,
Cecil.  This is like one of those Saturday Night Live bits about how the
duration of WWII would have been effected if Eleanor Roosevelt could
fly.

Their object, like the object of a lot of hams I know, was to be
able to communicate on the VHF/UHF ham bands. Does that make them
underachievers?

We are currently shipping DSP systems which digitize 800 MHz RF -- yes, the complete bandwidth, not just the modulation, without conversion to some lower IF frequency.

It's a fully digital system -- no analog involved -- so it maintains the complete dynamic range of the original, and because the entire bandwidth is digitized, the system is completely transparent to modulation technology -- voice, data, video, whatever.

I am not an underachiever at being a garbage collector, Dave. I
simply don't want to have anything to do with collecting garbage.
Are you an underachiever at cleaning out septic tanks? Just because
someone doesn't choose to do something doesn't mean they are an
underachiever at it.

Any antenna is capable of a maximum amount of radiation efficiency,
without changing it in some way. When you change only the feed system
what that tells me is that you have provided a better match for the
antenna to absorb more of the provided RF and thence it radiates more,
without exceeding its former maximum radiation efficiency. You haven't
changed the antenna so all of the improvement has to be within the
system of matching the antenna.

Dick W0EX

 Well you *did* say on a few occasions that your bosses know you
wouldn't say or do anything that worked against League policy. I suppose
that if they didn't know that, they'd ride herd on you? In fact I KNOW
it.

Dick doesn't know it, but he regularly practices a DSP technique
on this very newsgroup - it's known as convolution. :-)

And hopefully learn something in the process. The FCC doesn't see
anything wrong with that, Dick. You know who the FCC is, don't you?

Looks like you had a chance to observe "antenna currents" flowing on the outside shield of the coax first hand. I had that problem running a mobile mag mount antenna for 6m. Fixed it by winding about a dozen turns of the coax through a ferrite toroid. The symptom was the SWR varying all over the map when the coax was moved.

If you look at the ARRL handbook you will see an example some place of a 1/4 wl section of coax run through a pipe, or conductive shelve, right at the feed point of a balanced dipole antenna. The shield of the coax is then shorted to the pipe at the end opposite to the antenna feed point. The coax shield and the pipe form another "coax" system, which when shorted as in the above manner, makes the open circuit end look like a very high impedance to the "antenna currents" trying to flow on the outside of the coax shield. Of course the high impedance stops the "antenna current" flow. When the shield of the coax is connected to earth, vehicular, ground back from the antenna feed point does the same thing, but the transmission line is composed of the outside of the coax shield and the surrounding vehicular body sheet metal.

The reason the SWR looks bad when you have "antenna currents" is due to the design of your "typical" SWR meter. The normal design has a circuit which measures the voltage at two different points on the line, and through a little bit of math, can be related to the forward traveling voltage wave and the reverse traveling voltage wave. Part of this calculation requires measuring the RF current on the line. That is normally done using a simple H.F. current transformer. The problem is with the current transformer. It can't tell the difference between the "real" current on the line and the current flow due to "antenna current" on the shield. So it ends up measuring both, now you have a screwed up SWR reading. Of course many rigs also use a similar circuit to measure SWR to protect the output finals by folding back power. So If you have problems with "antenna currents" you can have problems with a mobile rig folding back power when the "real" SWR is OK.

So in the end I'm not really surprised that doing what you talked about makes a mobile antenna system appear to work better. What you did was let your equipment make a better SWR measurement in the end, and kept RF out of the "shack" so to speak too.

Jeffrey Herman says:

> At present, there is only one mode all the world's
> HF-licensed amateurs hold in common: CW.

Facts are, by definition, a therapy of limited usefulness in treating cases of advanced delusion. But let us try a few on Jeffrey's notion that a knowledge of CW is common to all HF-licensed hams. These pills may help others who are less severely afflicted by this delusion.

Fact: The government of Japan has issued licenses to almost 3 million "Fourth Class" licensees.

Fact: This represents a bloc of licensees which is larger than all the remaining licensed amateurs in the world *combined*.

Fact: These licensees are authorized to operate on 6 MF/HF amateur bands.

Fact: These licensees did not take a Morse code test to obtain their license.

Fact: These licensees are not even allowed to *use* Morse code on the amateur bands.

By deduction from the above facts, it is obvious that Morse is "common" to only a >MINORITY< of the worlds HF-licensed amateurs.

Good luck on this one now!

Yes, yes, and I'm one of the control operators for the seven repeaters

which provide blanket coverage of the island of Oahu, but that doesn't
matter, either.

>While they are certainly licensed as amateur
>radio stations (thus technically qualifing as ham-radio), I consider

That still doesn't explain your comment that "...repeaters aren't
ham radio..." I asked you to provide your definition of "ham radio"
but you deleted and never answered that question.

Well its a ham radio forum, and last I heard, the states do not have a
monopoly on that, nor do they have a monopoly on the outdated cw
requirement.  So it would make sense that if one was to make a post about
the abolishment of cw that they would give an explanation that would not be
between any particular borders, but, rather universal.

My objection is to you making comparisons between participants in this newsgroup (myself, in particular) and vicious, heinous criminals as one of your tricks to prove your "logical" points. It is offensive. Knock it off. IF you're not man enough to apologize, just stop doing it.

Larry, K3LT

I'm posting this question here because it is likely to be read by the largest number of knowledgable individuals. We live in an area subject to tornado activity and the local sirens are set up apparently with the recommendation of the manufacturer to cover a radius of roughly 1 mile. The sirens are tested monthly in fair weather and the warning sounds are heard adequately, but the question has arisen regarding the affect of wind speed and wind noise on the ability of people to hear the siren. Presuming a strong outflow gust of 50 knots blowing away from the observer and towards the siren, the sound would be substantially

attenuated, but to what extent, and how could future placement of
additional sirens assist the situation? Surely there is an expert out
there who has given some thought or research to this??

Is that a whine or a regret? In either case, I absolutely encourage you to achieve the goals you desire! Get on those traffic nets and become fully proficient at a useful communication skill! Why go half-way?

Roger that Larry. I'm in the same boat, I can barely get 20 on paper
although I can copy 30+/- wpm in my head. I can probably do 40 in the
contests. Theres no question in my mind that the cw ops who have

serious time in the NTS are by far the best there is as a group.
>
I know several including Mae ex-w3cul who lived in my neighborhood and
who was the top traffic handler month after month for years. Listening
to her on 40 was like listening to a symphony except she went on for
hours per day.

Not that I know of. Doubt he ever had any interest, either.

Back then, you had to be a citizen to get a ham license. Did AE ever become a
US citizen?

Okay, I'll bite. Show me where I've ever complained about ham radio. I'm one of the most fanatical supporters of ham radio, so you clearly must be talking about someone else.

It might well be it does explain why you flunked your first
Conditional Exam, if indeed you did. Moreover, and why all was
NOT in the license guides, contrary to your statements over many
years.

>
> So you claim. Never proved.

If your assertions are based on me proving something that happened 50 years ago, you are certainly on thin ice. I made 50 cents an hour at the grocery store. I certainly was not going to waste it on material that I didn't need to pass the exam. When I flunked the Conditional exam the first time, I realized it was because I didn't study the material in the ARRL License Manual well enough. I memorized more of the material and passed it the second time.

> >The ARRL preface in the manual said the manual was all I needed.

Huh? Here's a quote: "If our answers sometimes seem to the initiated to be naive or incomplete, rest assured that they are sufficient for the purpose." That meaning seems pretty clear, Vince.

> >I believed them and they were right. I didn't buy an ARRL
> >Handbook until four years later.
>
> They were wrong. Who said you learned all ONLY from the Handbook?

Nobody, Vince. I learned *ALL* I didn't know from the ARRL License Manual. I sorta suspect that they assumed that I could add and subtract already and probably could read the English language.

> >It's a fact of life, Vince. It's happening with or without your
> >permission or acceptance. You really need to come to terms with
> >reality.
>
> What's reality is that you agree you accept mediocrity, Cecil.

Mediocrity has been around since the dawn of time, Vince. That you don't accept it is a statement of your own mental state, not a statement about reality. I wish reality were perfect, just like you do, but I possess enough rationality to conclude that reality will never be perfect, unlike you, who enjoys wallowing in fantasy worlds.

Bottom line: God is not going to reward you in the afterlife for supporting a position that cannot rationally be supported in reality. Ham radio and Morse code are not religions for which zealots are rewarded by God. Why must you treat them as such?

Well, I know Larry may perceive it to be unfair, but he'll just have to get used to the reality of a modern world. Modern hams have had a taste of freedom from his archaic caste system and we are never going to be forced back into it. Therefore, if he still wants his delusions, he'll have to do it without our cooperation.

By who's definition, Vince? Your Highnee's definition? Did God
die and put you in charge of definitions? If so, why are you
so slow in doing something about it? Get off your omnipotent
a$$ and make some positive changes, for God's sake! (Have you
ever had any of God's sake? I'll bet it's pretty good stuff.)

The first Morse code exam was 5wpm, Vince, equal to the present
Morse code exam. That sure seems to cover the basics. How can
you disagree? Seems you don't dare to agree that the basics
change with time.

That's where _you_ are on thin ice, Cecil. You failed it the
first time. That indicates to me all that you expected from the
manual wasn't in there. 'Photographic' memory and all. Egods!

>The ARRL preface in the manual said the manual was all I

I don't know anyone who has demanded access to HF without meeting the requirements. The discussion all along has been about changing the requirements, not about access without meeting the requirements.

>By who's definition, Vince? Your Highnee's definition?

Certainly, by my definition. I get to use _my_ definition of 'exam,' remember? Not to mention the fact that no educator worth their salt would sanction a rote-memorized test as an exam. Hell, the fir is already flying, AGAIN, over such a debacle. Another national disaster, placed before us yesterday by the media, on this very problem. This is what happens when you open the door to mediocrity in education, Cecil.

So, according to your argument, anyone who demands privileges without meeting the qualifications is an underachiever. Well, that certainly says a lot about those who have demanded the privileges associated with this country (voting rights, freedom from slavery, and so forth), but failed to meet the qualifications at the time.

And, again, when it comes to code testing, the issue is not about a demand for privileges without meeting qualifications - the issue has always been to change the qualifications to better fit a modern world.

If so, they goofed up on the second exam which I passed by simply studying the ARRL License Manual a little harder. Methinks you are simply grasping at straws. Your whole argument rests on me being more knowledgeable than I was. Where were you in 1952 that

you could possibly know more about my knowledge than I did?
Were you really sitting on the right hand of God? To avoid
embarrassing yourself, please don't answer that question.

All that indicates is that I'm lazy and only attempted to memorize
and remember half of it, Vince. I certainly didn't want to expend
more energy than required to barely pass the exam. I'm not a
masochist, after all. I don't waste my photographic memory on
every trivial thing.

> If they
> could have said 'exact Q and A inside,' they would have.

I'm sure they knew the FCC would not approve even though it was

very close to the truth. You remind me of my preacher when I ask
him to prove that God exists. He uses the Bible to prove the validity
of the Bible. Duuuuuhhhhhhhhhh!

Why do you continue to clip the preface, "I wrote this a number of
years ago to answer such questions"?

Many of us tend to think of that 10 watt 4th Class JA license as a CB
ticket on steroids.

>there who has given some thought or research to this??

Gary, what make and model are your sirens? What is their decibel rating at 100 feet? (The specs sheets should contain this info.) What is their height above ground? Are there any obstructions (buildings, foliage) nearby. Did your city/county contract with the manufacturer for installation or did a local contractor install them? Are the air intakes routinely check for bird nests, leaves, or other obstructions? Have the intake screens been painted, thereby reducing the air flow to the rotors?

My dad's company used to manufacture a line of "air raid" sirens many decades ago, and I've also been a volunteer for the county civil defense here for 15 years, so motor-driven sirens are something I know a little about. I'm also forwarding your note to our CD communications officer -- he's the one who activates our 150 island/county sirens monthly.

Jeff KH6O

Nobody has answered my question, Dwight. If someone makes a demand
in the forest and nobody hears him, is he still an underachiever?

Blackie has been around longer than most posters are old.
What he says is his right to free speech.
Its the old story if you do not like it turn the dial.
Some must like it for they listen and then complain

>If so, they goofed up on the second exam which I passed by
>simply studying the ARRL License Manual a little harder.

Eh? You don't study, remember? It's clear to me you don't have an
answer to this convoluted series of events.

>Methinks you are simply grasping at straws. Your whole argument
>rests on me being more knowledgeable than I was.

Methinks what I conclude is based directly on what you say,
Cecil. And that is, you have a photographic memory, you didn't
study for your ham exams let alone your college degree, and that
you failed the Conditional the first time. A logical conclusion
to draw from that is that the license manual wasn't giving you
all that you said.

Another incongruity. You don't like wasting time, remember?
Studying half of it wouldn't likely get you a passing grade.
Being methodical, you wouldn't leave that to chance on the chance
you'd have to waste time by taking time to memorize more, as you
claim. You're getting in deeper, Cecil.

It would easily be so if one stopped copying the last minute of the sent text and used that time to go back and fill in the copied text. If the text was plain language, it is pretty certain there would be a minute of solid copy in there, with the last minute completely missing.

> The "multiple guess" tests are a different story.

The multiple guess tests are about to be history.

>doesn't work now. Because it's long been acknowledged that the
>Novice license then and now was intended as a give-away one.

It was intended to attract 13-year old kids into ham radio, and it worked for me. The present "entry-level" exam is so much harder that we are not getting a lot of 13-year olds.

Now, what was your take on my getting all amateur privleges as a General by studying a 16-page study guide?

Now Ed will chime in. ALL I studied for my General was the ARRL study guide. Did the ARRL lie when it said in the study guide that it was sufficient to teach what was needed to pass the test? Did the lucky guessing part of my exam get that lucky? I walked away having passed the General.

I don't think he is trying to convince you, Vince; he is trying to convince the three other people actually reading this thread. If they read the ARRL Handbook before taking their General in the 1950s, then they believe you. If they didn't read the ARRL Handbook before taking their exam in any decade, they probably believe Cecil.

I didn't read the ARRL Handbook before I took my General; I studied the 16-page ARRL study guide.

Dream on, Ed. We're not getting 13-year olds for a lot of reasons. The one you mention ain't even in the running.

>Now, what was your take on my getting all amateur privleges as a
>General by studying a 16-page study guide?

You already know that: One could be lucky in closing his eyes, and that's as far as it goes. Just as Cecil has shown just today that he 'cowboy'd' the story about passing his Conditional with his photographic memory, but mentioning he failed the test the first time. Articles have already been written on this subject concerning the Extra Class, and how one couldn't pass by memorizing the License Manual; now you're essentially stating the case was different for the other classes. But history, and even Cecil, can't show that to be true.

'Sufficient to teach what was needed' isn't the question, Ed. The
question is whether we did, or didn't have, exact Q and A. Which
is, amazingly enough, what the issue's been since c. 1980. Which
the ARRL got involved with, before deciding to sell those same Q
and A books it was going to go to court against.

>Did the lucky guessing part of my exam get that lucky?

It's conceivable, it could very well have been.

In my case, it was crawling thru the mud under barbed wire, machine-gun fire zinging inches from my head, a K-Bar clenched in my teeth, the taste of my sweat causing the camo makeup to run into the corners of my mouth. You see, that FCC office was in downtown Baltimore!

>
>I think I have decided that you just like to hear yourself say it.

Ed:

I have a question to ask, but it would have to be based on some presumptions, a few of which are rather far-fetched. Here they are:

Let's say that there was an opening for Editorial Director of QST magazine…

… Let's also say that I had a degree in Journalism and many years of experience on the editorial staffs of publications in the electronics and computer fields…

… Let's also say that I was widely known and respected as an editor, and my resume was full of glowing endorsements from publishers I had worked for in the past…

… I am still possessed of my present "attitude" toward Restructuring -- to wit, if given the power, I'd retroactively nullify all amateur radio licenses issued since April 15, 2000 and require all of those licensees to re-test under the pre-Restructuring testing standards in order to regain their HF-privileges at levels above General class…

(Here's the far fetched part)

… And I was willing to live and work in the state of Connecticut.

Now, here's the question:

Do you think there's any possibility that I, Larry Roll, K3LT, even if technically the best qualified candidate for the position, could get a job with the ARRL as editorial director of QST? Please leave out any technicalities such as "there isn't any such position" or "we already have one" etc. Just answer the question based on the above hypothesis.

Cecil:

"We" did nothing of the sort -- that was just the misconception of those
who, through their own indifference and inaction, were stuck at the
lower levels of the former licensing system.  I had no need or desire
to form any kind of "caste" system, and I don't know any other pre-
Restructuring Extras that did.

 Hey Larry I think it was last months Issue, just glanced thru this month and
he was there, I only keep them a Month and throw them away, there good for much
of anything else.
 I think the Picture was of him and some guy giving him a Free Handout of some
kinda of CB Radio, if you find the picture look and see if hes got his Pocket
Protector on, I dont remember.

Cecil:

I'd hardly call receiving 99.7% of *all* amateur privileges as an
entry-level licensee an "underachievement." Unless, of course,
the "underachievement" relates to how these privileges are
utilized. There's the rub...

>

Dwight:

Not nearly as dumb as those who cannot comprehend the fact that in order to access the benefits and advantages of the Morse/CW mode, there must be radio amateurs capable of *using* the Morse code at a useful proficiency level! I just don't happen to believe that this skill will develop in a vacuum -- I believe that the code testing requirement created the numbers of code loving, code-proficient hams we have today.

There is no jealousy on my part. That ended the day I determined that I was going to become a code-proficient radio amateur. From that point on, it was easy, fun, enjoyable. I just wish you could have had the same sort of epiphany.

Dwight:

Not at all -- I did them because I wanted to have the benefits and
privileges that went along with those accomplishments. The fact
that others achieved these accomplishments before me just proved
to me that I could do it myself! Once I gained the self-confidence,
I had no problem achieving my goals. Being a "lemming" had
nothing to do with it.

>there who has given some thought or research to this??

My guess is that an observer located in a a position where he was more or less in line with the siren, but facing the direction of the wind gust, would experience a slight Doppler shift in the frequency of the siren's tone and a noticable reduction in volume, due to the fact that the wind gust blowing in the siren's direction would provide resistance to the siren's sound pressure waves, thus attenuating them. Locating the siren(s) upwind of expected gusts would seem to be the obvious solution. You would need to measure the siren's volume at a given location in still air, and then compare that value to the volume level received at the same location when a wind gust of a known speed is travelling directly on a heading toward the siren in question. At that point, you'd need someone with some genuine math skills to apply a dB value to the readings, and extrapolate the changes at different wind speeds. I recommend finding a high school honors student of Japanese descent.

Nobody says it did. Those numbers are from the QST Product Review, which was done in the standard fashion used in the lab, I believe.

Does there exist a practical A/D converter/DSP system that comes anywhere near that performance?

The 75A4 has an effective notch filter as stock equipment.

A 75A4 with the W2VCZ mods will give most "modern" receivers a good run for
their money. Then there's the SS-1R.....

Sure - but that's not what I'm talking about. I'm referring to the need for analog filtering, and possibly many other analog functions like amplification and gain control, before the A/D conversion.

Nope. It makes 'em Techs. If that's all they want, that's all they get.

Are you taking issue with my comment or did you actually have a point to make? I'd like to make certain before you veer off in another direction. I don't recall making any garbage collector or septic tank comments. I was under the impression that we were discussing amateur radio. Some go as far as they want. Some go as far as they can. Some don't go at all.

Complain about ham radio? What are you talking about? I've never complained about ham radio. As for the internet, my views are based on my own experiences, Dick. The fact that you have a difference experience does not change mine.

Hi Gary,

I can get an answer to this, but would first have to know how loud the siren is at a given distance (with no wind).

Did you do those things because of others who came before you? After all, that was the reason you gave for upgrading to Extra class.

> No, Dwight, I don't think "people" are
> envious of me -- I think YOU are envious
> of me!

Larry, when I formed my opinions about code testing, I didn't even know you existed. You had no influence on my decisions about code testing. And I've read a ton of nonsense by you since, and you still have had no influence on my decisions about code testing. Again, your perception of the envy of others is based on your own delusions of superiority.

> My "superiority" to the typical no-coder
> is no delusion, Dwight. It is an absolute,

In article <20010605041228.10524.00005996@nso-md.aol.com>, yodoc@aol.comnospam (Larry Roll K3LT) writes:

>There are slow-speed code traffic training nets that usually
>operate at around 10 WPM or so.

Yup. Here in EPA, PTTN is the slow net and EPA the regular traffic net. 3RN is the region and EAN is the area net.

>The problem with these is that
>in order to participate reasonably well you need to sit there
>copying everything you can hear on the net a few times just
>to get the "feel" for what is going on, since net operation is
>a lot different than a regular QSO.

What's the problem? Listening to a well-run net on any mode is a joy in itself. Listening to a well run CW net is double the fun.

>You should also have the
>"Net-specific" Q-signal chart close to hand, and learn the more
>well-used ones like QRV, QNI, QTC, etc.

You only need the chart until you memorize them. The amateur-net-specific ones all have N as the middle letter. The others are from the standard list. Here are the ones I remember without looking:

QNA - Answer in prearranged order
QNB - Act as relay between...
QNC - All net stations copy
QND - Net is directed
QNE - Entire net please stand by
QNF - Net is free (dismissed)
QNI - Check into net
QNX - Excuse(d) from net
QNZ - Zero beat to NCS frequency

There are also lots of prosigns and of course the standard ARRL message format. Just takes a little study and some listening. Nothing to it.

>Once you get
>used to CW net operation, however, it is really easy to get
>traffic handled.

Yup. Been there, done that. Faster and more accurate than 'phone, too.

Those folks don't waste a dit. No guessing on the copy, either - you either got it right or you didn't, and if you didn't, you asked for a fill. Of course it takes a while to get the skills, and even longer to get really good.

I never met W3CUL, even though she lived only a few miles away, but I got to know W3WRE really well. I still miss 'ol Lou. Luckily, her world-famous key collection was kept together and is now at the AWA museum. I never met most of the other net regulars, who lived farther away, but it got so I could tell their signals in a letter or two.

I recall one session where I was NCS and the early evening section net handled 42 formal messages in a 30 minute session, including call up, check ins and check outs, etc. The region and area nets go faster and do more.

>I wish I had spent more time on CW nets, I
>would probably be a 30+ WPM operator now instead of being
>stuck in the low 20's.

So DO it!! The nets are always looking for checkins.

There's also W1AW code practice. And the speed merchants on the lower part of 40 meters.

Speed is not the only skill needed, though. Accuracy is even more important. What some folks call "situational awareness" is a biggie, as well. Being able to do several things at once is a must. Lots of other stuff, too, like zerobeating (transceivers were for rich hams back then).
>
Those traffic nets are where I got my real CW skills. I was on practically every night, sometimes going to the region and even area nets. Also a regular NCS and region net rep. Pretty heady stuff for a 14 year old with a

homebrew/surplus 50 watt station, a wire and a straight key. I eventually built a rig with QSK to handle traffic better. This was back when none of the manufactured rigs had it. 20 per in the FCC office was nothing much after two years of clearing the hook on 3610 and 3590.

> whining?

Kim, jealousy has been part of this since the very beginning. In addition, many higher class license holders are also mad because license class means nothing above 50 MHz - the Technician has the exact same privileges as the highest license class holder. Many see that as a potential threat to the entire license class system. If Technicians are able to perform just as well as the other license classes above 50 MHz, why continue to have license classes below 50 MHz? That thought is what drives so many to trash Technicians whenever possible (even if things have to be made up or exaggerated).

Likewise, it is that thought which drives the fanatical demand that new hams go though the same ritual as previous hams. In other words, the defense of CW is often a defense of the entire license class system - the first line in the sand.

And, of course, much of this is based on the false sense of superiority that many hams have wrapped themselves in for decades. Many hams have fooled themselves, and often friends or family, with the nonsense that the license is proof of skills and knowledge far above what it actually proves - that the license holder took a basic test and now has certain operating privileges. It is that false sense of superiority that causes so many hams to think that, if a new ham gets his license without the same ritual, it devalues the license.

Furthermore, to give another person the same license without the same ritual, proves the ritual itself is not as valuable as these license holders have convinced themselves and often others. So, in addition to the jealousy factor you describe, the reduction in the code testing requirement was also a blow to the ego of many higher license class holders.

And, of course, some people are just downright dumb. Some just cannot separate the value of the code test requirement from the value of CW itself (these are not the same thing). You can see these people in every code testing debate screaming about the value of CW.

So all nocode techs are not underachievers?

Kim,

That's pure unadulterated Texas Longhorn manure.

Larry and I can find a lot to disagree about, including the need for high-speed Morse code testing, but despite our disagreements, Larry is an honorable sort with the best interests of the Amateur Radio Service at heart. He genuinely believes in the value of Morse testing as a requisite to full Amateur privileges. You don't need to agree with him (I don't) but it's not a "whine" and he's not "mad that he had to do it".

Grow up.

73,
Hans

If I demand an income tax refund but the government doesn't deliver, does that make me an underachiever? If I demand that you send me $100 and you don't, does that make me an underachiever? I'm having trouble comprehending exactly how an empty demand consisting of a few words can turn someone into an underachiever. What, exactly, has been underachieved?

If the demand for HF access is made in the forest and nobody hears
it, is the person speaking the demand still an underachiever?

Some hams on this newsgroup assert that all nocode techs are underachievers.
I'm just trying to ascertain if you are one of those hams.

It was more an attempt to expand the number discussed than an attempt to critique your writing (everyone who was handy as opposed to who was handy). Unless I'm mistaken, "whoever" in that sentence would get you past the QST proofreaders. Of course, I never was able to get who, whom, whoever, and whomever, straight, so you probably would not want to take my word for it.

I respect your belief in Larry, Hans. However, I also respect our right to disagree with each other, and don't think it has anything to do with ages.

I've taken many "timed" tests and have never been forbidden
from go back to recheck or fill in missing answers I may have
skipped over if time was still left.

Since the ITU treaty makes no time requirements nor does
it require any direct conversion, it seems that would be
OK.

But current testing does allow filling in.  One can certainly do that
during the time the applicant is trying to answer the 10 questions.

Who cares, so what?  Hams have no such equivalent
copying that I am aware of.

You say that nocode techs make you beat up on them, Larry. You are too old to be a spoiled brat and I've heard that same basic excuse used by criminals many times. Seems it's you who should be apologizing for blaming the victims of your attacks for your attacks.

...What about the next siren in the plan, especially the one UPWIND and behind the observer? Any situation is going to have more than one, spaced at two mile intervals or less.

Let's face it - Only the real hams are Morse code literate. Not I
didn't say "Qualified", as in having been credited with passing some
sort of a code test.
That would leave out the entire "three million" Nipponese along with the
similiarly situated elsewhere. They should be knows as "ham radio
licensees".

According to ARRL VEC, the Extra class question pool is open for revision now, with the current question pool valid until 6/30/2002. A year from now the Technician pool comes up for review, but the current pool is valid until 6/30/2003. In 2003 the General question pool comes up for revision, with the current pool valid until 6/30/2004. Also effective 7/1/2001 the multiple guess code test format is not to be used. Solid copy and fill in the text are still ok.

So then they should have shut up about real achievers who wanted more
insread of all the incesssant whining about code testing.

What I said is that such analog help would probably be the optimum way to
create a recevier system. There are analog components inside a DSP chip --
where do you think the line is?

When I took my tests before the FCC in the 70s, I was in a room of about 50 applicants. The FCC examiners sat at the desk the entire time. If fairness, when I took my General in the 60s, I think there were 6 of us there and the examiner watched us pretty closely.

> Well you *did* say on a few occasions that your bosses know you
>wouldn't say or do anything that worked against League policy. I suppose
>that if they didn't know that, they'd ride herd on you? In fact I KNOW
>it.

Perhaps, but the same principle applies to their not riding herd on my phone calls, my letters, my emails, my visits to local clubs and ham conventions. If my boss doesn't believe that I will conduct myself in a way that does not undermine ARRL policy, I am sure his actions would extend past riding herd on me, Dick.

I have no problem with those that understand that aspect of my posts. What I don't like is those that misunderstand that. Mark doesn't give two shoots about whether I post on rrap or not, in fact, he would probably rather I didn't. The precept that I am posting here to further my career is laughable, or disengenuos, or simply intended to inflame, IMHO.

I absolutely disagree, Dick. Most newcomers do what we all did -- pass their exams with a combination of learning, memorizing, lucky guessing and just plain hoping that some topics are not too heavily weighted on the exam they end up taking.

Rote memorizing hundreds of questions without understanding is the hardest way I could imagine trying to pass the exam. Maybe that is why you avoid memorizing all those Russian words to show us how easy it it. :-)

> Any antenna is capable of a maximum amount of radiation efficiency,
>without changing it in some way.

A short 40-meter mobile whip with a coil Q designed that there will be a 50-ohm resistive impedance at the base when the antenna is placed on a typical car over average ground will show an efficiciency of about 15%. How can this antenna be made capable of "maximum" radiation efficiency without changing it?

>When you change only the feed system
>what that tells me is that you have provided a better match for the
>antenna to absorb more of the provided RF and thence it radiates more,
>without exceeding its former maximum radiation efficiency.

If the SWR was good before the change, the antenna is already matched to the feed line. The inefficiency was either in the antenna or the feed line was losing it as heat. I know of no change to a feed line that is already exhibiting a 1:1 SWR that will improve its match to the antenna. Can you elaborate a bit?

I literally had to run uphill to my FCC test in Boston in the 70s -- my car had been towed near the common and I had to hoof it. Doesn't that count?

I missed the 20 wpm code test, so I had to settle for an Advanced. Shouldn't the FCC have given me the Extra for working so hard to get there? :-)

I don't think Dick is lying; he seems to get you and me confused at times. Maybe we need to get your picture in QST so he can tell us apart. :-)

I had said that antenna-to-DSP is possible right now, but not practical. I also said that it will be practical at some point in the future, although I expect that the most economical and functional designs will include some analog components. I will add that I also expect that most of those analog components will be integral to the DSP components at some point.

What I don't understand is why some here are having to claim I said something different that what I said to try to prove what they are saying. That is really odd.

> I have a better idea. You and your friends stop whining about CW,
>and I'll stop responding to what you write about it.

Dwight:

Don't look now, but my friends and I aren't "whining" about CW! We just went out and learned it, took the tests, and then went on doing whatever we damned well pleased as hams -- without having to waste decades out of our lifetimes waiting for the requirement to be dropped! If I've "whined" about anything, it is the fact that I once did "whine" about the code testing requirements. Just think, I could have been a QCWA member years ago -- as it is, I won't be eligible for another five years, just because I wasted valuable years of my life not wanting to be bothered to learn the code! Moreover, I know exactly WHY I didn't want to learn it -- I was too damn lazy to give it a try, and I had a terrible fear of failure with regard to it! As I matured, I lost those behaviors, and finally discovered what I had been missing all along.

Now that Dwight and his NCTA colleagues have finally lived long enough to see the code testing requirements removed, they now need to find any way they can to discredit those of us who have succeeded under the pre-Restructuring system -- for the sake of justifying their indolence. Their purpose is as obvious as their motivation. They realize that they are now left at the bottom of the "caste system" they abhor, but no longer have a way to work their way up and out of their permanent mediocrity. And rather than attempt to prove me wrong by delivering on the technological promises made prior to the reduction of licensing standards, they find it much easier to whine about us PCTA's. Well, they have made their bed, crapped into it, and now must now find a way to sleep in it. I wish them luck -- they're going to need it!

Of course, the difference being that today ALL classes of licenses are intended to be "giveaway" while maintaining the fiction that the ARS us a "fundamentally technical service". How else toget all the CBers and freebanders licensed as hams, and off their junk-missions? Whatta joke.

Using my photographic memory is my form of studying, Vince. The first time, I simply didn't memorize enough of the License Manual. The second time I did.

The first time I took the Conditional exam, Vince, I tried to get
by with memorizing only half the license manual. I didn't memorize
any schematics. Second time I memorized the rest of the License
Manual and passed the exam. I had absolutely no other study materials.

That's impossible, Vince. It all happened 50 years ago. I thought
I could pass the conditional exam by memorizing only half the
License Manual. I was wrong so I memorized the other half.

Vincent Biancomano wrote:
> The question is whether we did, or didn't have, exact Q and A.

The questions were close enough and the answers were exact. What
good would inexact answers have been? I can just see it now:

Q: What is the basic unit of electrical resistance?

A: It's a three letter word starting with an 'o' and ending with
an 'm'.

What difference does it make if someone demands something they can't
have, Dick? Exactly what power do their demands have over you?

I think Al Einstein's folks had hoped he grow up and own a nice bakery.
It saddens me to think how disappointed they must have been.

My comment was that Al could have been labeled as an underachiever. I
didn't state that it was my opinion that he was such.   I'd rather talk
about amateur radio.

I've had a belly full of Dr. Williamson stories.  The mysterious doctor
should really learn to speak for himself.  I've always been suspicious
of non-medical folks who are referred to as "Doctor".  My dad has never
been called "The Reverend Dr. Heil" though he could be.

Why not just speak for yourself and leave the doctor tales out?

  I'm still trying to figure out what he is talking about.  While I
may occasionally rant about code testing, or some other aspect of ham
radio, I don't remember ever complaining about ham radio itself.  Are
my messages coming across differently than my intent, Cecil?

You're off the subject again, Dick. We were talking about Larry's delusions of superiority because of his license class, not morse code. As for the underachiever nonsense, I'm more than satisfied with the achievements in my life - most of which are much more impressive than the code skills you place so much value on in yours.

What do you know - a message nearly void of names or characterizations. Now, this is something that two intelligent people can discuss, Larry. I think CW would continue to be just as popular if hams put even half the effort currently spent ranting about the demise of code testing into simply promoting CW instead. Everybody is much more open to new things when they're presented as fun rather than demanded through requirements that make little sense.

When I got into ham radio itself, I did so because it appeared to be fun. If someone had tried to force it on me instead, it is doubtful I would have such a positive view about it today. The same with many other things in my life. For example, I like to pound on music keyboards. However, I doubt I would be as interested if my mother had force me to practice endlessly when I was younger.

There you go. That is a much more positive way to promote CW - easy, fun, enjoyable. Keep it up and I may actually get more interested (actually, I intent to soon anyway because we're thinking about heading back overseas again - if we do, I'm thinking about the interesting possible contacts on HF from overseas).

Do you still think that vaste hordes of people want to become hams not to learn about radio? How odd.

Let's ask the point directly.

Dwight, I passed a 20-wpm code test and can handle 35 wpm paper copy and 45 wpm head copy. Do you believe this is to my discredit?

Others are free to chime in, of course.

Here is a site that shows the math involved in factoring sound attenuation with respect to enviromentals. Though the site relates to sound generated by a waterpark/lake/arena complex, the math should work in your case.

http://www.laku.com/sound-a.html

Be Well!

>Do you think there's any possibility that I, Larry Roll, K3LT,
>even if technically the best qualified candidate for the position,

>could get a job with the ARRL as editorial director of QST?

Absolutely not. The position requires someone who can deal with HQ staff and outside people without using a virtually non-stop barrage of insults and innuendo. I am afraid that your track record on rrap would convince anyone who wanted to hire you that you are unsuitable for a position that deals with people.

As I had openings in the Lab, I looked to see if any of the candidates had done posts to newsgroups. I cared not one whit about which side of the code-test fence they were on, but would have evaluated the way they expressed their views. Not everyone in the Lab agrees with my personal view on code testing, Larry, nor do I care if they do.

Just as a counter example, I can think of one very vocal NCTA who no longer posts on this forum that I would not hire for the same reason as I would not hire you, although he did manage to get a grip on his emotions and at least try to be more productive in his postings.

Does that help?

I forgot which issue it was in, but that is the one where there is an Up Front picture of my accepting the donation of an Elecraft K2 for W1AW.

Not quite a "cb" radio, Bruce, but to you, it is all CB, so none is the difference. :-)

>>It was intended to attract 13-year old kids into ham radio, and
>>it worked for me. The present "entry-level" exam is so much
>>harder that we are not getting a lot of 13-year olds.

>Dream on, Ed. We're not getting 13-year olds for a lot of
>reasons. The one you mention ain't even in the running.

I disagree. When you hand a 13-year old kid a 4-page study guide, it is likely he or she will go through it and take the test. When you hand that same kid a 200-page book and tell him or her that this is what needed to be a beginner in ham radio, it is not nearly so likely.

And when you then tell the same teenager that the 200-page book is really dumbed down from the 4 pages that hams used to have to study, you have put the final nail in the coffin of that kid's interest in ham radio.

>>Now, what was your take on my getting all amateur privleges as a
>>General by studying a 16-page study guide?

>You already know that: One could be lucky in closing his eyes,
>and that's as far as it goes.

Well, apparently lots of people got lucky, then. :-)

> Articles have already been written on this subject
>concerning the Extra Class, and how one couldn't pass by
>memorizing the License Manual; now you're essentially stating the
>case was different for the other classes.

I agree with you; the Extra Class test could not be passed using the study guide, at least not by most people. But in 1964, the year I passed my General, the Extra was a "vanity" license, conveying no more than bragging rights. ALL amateur privleges were given to those who studied/memorized the content of those 16 pages, and although not all of the questions were exact, I had no trouble at all recognizing the correct answers to most of the questions from the material I had read again and again in preparation for the test.

As to the "Ohm's-law" type questions, it is easier to memorize one simple formula and apply grammar-school algebra than it is to try to rote memorize all the answers. Was then and is now.

Dick has spent a tremendous amount of energy and time being angry with and expressing his anger toward people who may not agree with his opinions on CW testing and requirements. If I had to guess, I'd guess that the issue has a tremendous amount of power over him.

My opinion that repeaters are not ham radio is right up there with
your claim that JA Fourth Class operators are not HF hams. Deal with it.

Dick has a set of Tarot cards with which he can determine your ulterior motives and hidden agenda no matter what you actually say in your postings. He often uses those Tarot cards on Ed and me.

Here's the text of the article, with the link below. The gist is that the DOD is in a vulnerable position in terms of protecting their spectrum. Since there are no specific frequencies mentioned, I don't know what range the wireless industry considers "beach-front property" as the article says. Doesn't the DOD have the primary allocation on 70 cm? Does anyone know to what extent the DOD uses that band?

Matt N3SOZ

Defense Dept. Officials Warn of Wireless Spectrum Overload

WASHINGTON, D.C., U.S.A., 2001 JUN 6 (NB) -- By Dawn S Onley, Government Computer News.
Army Major Gen. James David Bryan stood before a Washington audience Tuesday and bet $10 that no one had more wireless devices than he had. One person had two gadgets. Another who raised his hand had four.

Bryan had seven, and entertained the attendees at the AFCEA TechNet International 2001 conference by pulling out an array of wireless contraptions from his uniform pockets, including a cell phone, pager, personal digital assistant and garage and car door openers.

"When did all this happen?" Bryan asked the group, referring to the 115 million - and counting - cellular subscribers in the United States. "If we're not real careful, we face chaos in the wireless environment."

Bryan, vice director of the Defense Information Systems Agency, called for regulation of the wireless spectrum and a set of standards to emphasize security, research and development.

"This is a global problem," Bryan said. "The stress this is putting on the spectrum is enormous. Spectrum is a shared national and international commodity. There is just not enough to go around."

In recent months, the Defense Department has come under increased pressure from Congress and private cellular companies to relinquish or share some of its valuable wireless spectrum. This has prompted a report by DOD arguing that preserving its limited spectrum is crucial to national defense missions.

With the growing use of wireless technologies, the United States is unique in that there is no spectrum policy in place to balance national security with commercial uses of frequency spectrum.

This puts the DOD in a vulnerable position, said Rear Adm. Robert Nutwell, deputy assistant secretary of Defense for command, control, communications and information, surveillance, and reconnaissance. Nutwell said the DOD spectrum allocation is being viewed as "beachfront property" by the cellular telephone industry.

He said full-band sharing is not feasible, but DOD could vacate some parts of the spectrum under conditions that would include reimbursement for the space and finding comparable spectrum for the DOD.

Reported by Government Computer News, http://www.gcn.com .

Actually, since there is no retesting requirement, a licensed HF ham can forget he ever knew Morse code. I know some HF hams who have done just that.

You're allowed to speak about anything you like. Being allowed doesn't make it mandatory to do so. You've regaled us with tales of the wonderous "doctor" for years. Why not let him speak for himself?

I could fill you in on my friend Herman Peaquist (not his real name) who lettered in four sports, won the Silver Star during the Second World War and who aced his Extra Class morse and theory exams back in the 60s. He is an overachiever. His exploits leave Dr. Williamson in the dust.

He is very outspoken, Dave, but he wouldn't waste his time on a purely nonsense newsgroup like this one.

     Am I mistaken, or are you not the SAME Hans Brokeslob who, only a couple
weeks ago. was "dissing" me over the tenure of the tagline that appears on MY
posts...?!?!

    Of course I KNOW it's you, Hans...I recognize the Lenniesque "Do As I Say,
Not Do As I Do" rant.

    As usual........

OK, I'll try to get you guys, Hans and Dick, to engage in some intelligent discussion just for the sake of seeing whether you can actually do it or not. I am offering this for your consideration:

Hans, in your note, you say: "Larry is an honorable sort with the best interests of the Amateur Radio Service at heart." There's two ways that can be taken: a) the "best interests of the Amateur Radio Service" may be considered by you to be a select few people, or b) the "best interests of the Amateur Radio Service" may be considered by you to mean amateur radio as a whole. If the former, then your indignation to my observation is understood. If the latter, then how would you explain that Larry's continuous lamenting that amateur radio should go by the wayside (paraphrasing his many comments along those lines) is in "the best interests" of amateur radio? I am just looking for some clarity there.

Dick, rather than answer through emotionalism, why don't you explain what it is about my observation(s) that you find in error? Is it beyond your ability to discuss issues without the personal attacks? Do you honestly live your life in such a manner--that you allow your emotions to take over your intellect?

I refuse to engage in such behavior this time around, in this NG. Please don't take my distaste for such behavior as being dictatorial for how you (or anyone else) must behave. You may behave in any manner you wish. I just choose to behave as I believe an intellectual adult would.

>don't you?

Well, Cecil, at least you show by admission via the above that
licensing as conducted through the 60s was different. The old FCC
wasn't interested in that you 'hopefully learn something in the
process.' They wanted you to _know_ your basic electronics.
That's all changed now. The new FCC doesn't care what happens to
Amateur Radio, they just exited the Service. A movement that
started at least 20 years ago.

>Is the FCC in on the scam?

The FCC was in on reducing requirements across the board,
Cecil, code AND theory. As quite well stated by former ARRL
president Vic Clark almost 20 years ago, and as culminated in
FCC's recent R&O. Extremely easy to understand, Cecil.

It sure was. I passed my entry-level Novice license by studying a 4-page study guide and passing a 20-question exam. I then was given all Amateur priveleges by getting a General after studying a 16-page license manual. If we went from today's standard to that level, you would lead the howls of protest, I am sure.

>A movement that started at least 20 years ago.

So you are saying that Amateur Radio has been no good for over 20 years. Sounds like nothing more than doom and gloom to me, and I sure don't buy it.

What's the real point of Cecil's quiz, Ed?  Is it to say that because
one is successful in one area of life that one cannot be an
underachiever in another?  Cecil's Albert Einstein question is silly on
its face.  Albert Einstein wasn't a radio amateur nor, to my knowledge,
did he ever attempt to obtain a license.  He probably couldn't play the
ukelele either.  If he tried either and failed, he could have been
labeled an underachiever in those particular areas.

No one has questioned whether astronauts were successful as astronauts.
Cecil's question had to do with whether they were underachievers as
hams.  The only correct answer is:  Depends on what they set as their
goals.  I don't think you can find fault with that.

You already knew the answer from my past posts. While I hate to see
anyone handcuff himself by limiting what he can do in amateur radio,
there is a flavor for everyone within ham radio.

W5TIT says:

>Hans, in your note, you say: "Larry is an honorable sort with the best
>interests of the Amateur Radio Service at heart." There's two ways that can
>be taken:

There are dozens (maybe even thousands) of ways that can be taken, and
we will each "take" it through the filter of our own experience and our
own hopes for the future of the Amateur Radio Service.

First, I believe Larry to be an honorable sort of fellow. He seems
straightforward, consistent, and honest. I suspect that he pays his bills
on time, doesn't cheat on taxes, is kind and compassionate to the elderly,

and repeats difficult words when sending CW traffic. He has some opinions different than mine, but that is not dishonorable.

Second, I believe that Larry has the best interests, as he sees it, for the future of the Amateur Radio Service. You or I may see those "best interests" differently. I would like to be allowed to admire a person's opinion as I would his dog - without being expected to take it home with me for my own.

> I just choose to behave as I believe an intellectual adult would.

Intellectual *adults* do not make patronizing sophomoric challenges like "OK, I'll try to get you guys, Hans and Dick, to engage in some intelligent discussion just for the sake of seeing whether you can actually do it or not."

With all good wishes,

73, de Hans, K0HB

Well, yes. That's what I said. Any antenna as it it presently exists, is capable of amaximum amount of radiation efficiency. I didn't say that it was optimized for maximum, just that it presently has a maximum. Obviously any change in the feed system that improves radiation without changing the antenna in any way doesn't change that maximum, does it?

>

I *hope* you're experienced enough to know that an SWR meter placed at the transmitter doesn't necessarily reflect what is happening at the antenna.

Placing a ground on the coax shield 6 feet from the antenna with no further change IS changing the feed system without changing the antenna. If you would like to describe it differently I'm sure we all will read it.

Of course it COULD be that the antenna bases were not adequately grounded and grounding the shield six feet back DID change the antenna.

No, Ed, and that is the point. Only those who demand the privileges without meeting the qualifications are the underachievers.

> did he ever attempt to obtain a license. He probably couldn't
> play the ukelele either. If he tried either and failed, he
> could have been labeled an underachiever in those particular areas.

Not really. Trying to play a ukelele (or trying to copy Morse) and
failing does not constitute underachieving. It is only "underachievement"
if there is a prior reasonable expectation that they had such a talent.

You might think a math score of D- is underachievement, but if my math
teacher reasonably expected me to fail the quarter and I got a D-, then
I am an overachiever. If she reasonably expected me to get an A, and I
only managed a B+, then I am an underachiever.

Cecil again attempt to attribute to his opponents that which they
didn't say or do. Thre underachievers are those of any class who whine
to the world about how their "rights" have been destroyed as they
attempt to change the requirements just because they don't like then,
don't want to comply with then, or are just plain too lazy.

Then you have changed the parameters of the original assertion, Bill.

"...if time was still left" was not a part of the original equation.

>Since the ITU treaty makes no time requirements nor does
>it require any direct conversion, it seems that would be
>OK.

The ITU treaty puts testing parameters within the scope of authority of the administering administration, Bill. If Lower Slobovia says you have two hours to figure out what was sent, then those are THIER rules. Depending on the era in which any particular test was administered, "one minute of solid copy" meant that you successfuolly copied the required number of characters in that amount of time....

NOT that time and what ever you added on to "fill in the blanks"

The "multiple guess" tests are a different story.

Interesting how those who think someone shouldn't be heard will jump on the
internet and advertise them far and wide. Doesn't make a lick of sense to
me.

And this very same explanation works for techies and engineers. Just
because htey achieved at their specialty doesn't mean they automatically
get a pass on ham radio.

Exactly which astronauts have whined about code testing, Dick?

Yeah, yeah. The the tunable INRADS in my artifact TS-940 let me do 90%
of those stunts without DSP. I'm well aware that DSP has it's place in
xcvr IF strips, been there, I've used a Mark V, DSP works. That's not
my point. My point is that to date DSP alone is *lousy* unless analog
filters are also in the signal path getting most of the energy in the
selected passband width outta the way so that DSP can do something
useful. Notch tricks are nice but without good skirt shapes to begin
with there ain't much to talk about. Wherin lies the problem with DSP
in it's current state of development.
>
>>Try that with your 75A4.

The big trick the modified 75A4 had in it's day was it's bulletproof
front end, not it's filters - which are very good.
>
Mine was a "w2vcz special", referred to back then as the 75A4A . . The
multi-multies aound here beat the crap out me to let them borrow the
thing for use on 80/40 in the majors.
>
> Then there's the SS-1R.....
>
Ayup.
>
The overall performance of all those old radios was surpassed starting
with the TS-940 and others of it's genere twenty years ago, I wouldn't
think of taking any of my beloved boat anchors into a dx 'test today.
However: Given the choice between one of those boat anchors and any of
the all-DSP rcvrs/xcvrs I've used I'd be hard pressed to not revert
back to my meatball 75S-3B with it's 200 & 500 Hz filters when the
rubber hits the road.

Dr. Williamson, PhD in EE, has been called an underachiever by some
posters to this newsgroup. I assumed it also applied to astronauts.
Some on this newsgroup assert that all nocode techs are underachievers.

You continuously "whine to the world", Dick, does that make you an underachiever?

And licensing in the 50s was different. Things change with time.
You can either make the best of it or whine incessantly forever.

> The old FCC
> wasn't interested in that you 'hopefully learn something in the
> process.' They wanted you to _know_ your basic electronics.

Oh? Is that why 3 pages of study guide accompanied the entrance exam
of the 50s and why 10 pages of study guide accompanied the exam that
granted 100% of all amateur operating privileges in the 50s?

> That's all changed now. The new FCC doesn't care what happens to
> Amateur Radio, they just exited the Service. A movement that
> started at least 20 years ago.

Amateur Radio is not the only thing being deregulated. So you must
stop relying on the FCC to shape the ARS and get off your lazy butt
and do it for yourself. Bitching, moaning, and whining ain't gonna
get it done, Vince.

Incidentally Ed, in 1957, the novice study guide was 3 pages and
the general/conditional study guide was 10 pages giving all amateur
privileges to a mail-order license. Half of those 10 pages were rules
and regulations. According to Vince, there was sure a lot of electronics
compressed into those 5 other pages that I rote-memorized. :-)

Ed, that schtick never worked for you when you started it, doesn't work now. Because it's long been acknowledged that the Novice license then and now was intended as a give-away one.

Yes. Novice then as now was a give away, Ed. And you needed more than a license guide above that class.

>Amateur Radio is not the only thing being deregulated.

Just because everything's being deregulated is no reason for 'Amateur Radio' to go crazy with it.

How about the 10-page mail order conditional license study guide,
5 pages of which were rules and regulations, which granted *ALL*
amateur privileges to an ignorant 14 year old?
--
cheers, Cecil

I'm not Ed, Vince, and the 50 cent ARRL License Manual was *ALL* I had to study for my conditional exam in 1952. The ARRL preface in the manual said the manual was all I needed. I believed them and they were right. I didn't buy an ARRL Handbook until four years later.

It's a fact of life, Vince. It's happening with or without your permission or acceptance. You really need to come to terms with reality.

> >So you must stop relying on the FCC to shape the ARS and get off

If you saw Ed and I side by side, Vince, you wouldn't get us mixed up. He's lots better looking than I am. :-)

>How about the 10-page mail order conditional license study guide, 5 pages of which were rules and regulations, which granted *ALL* amateur privileges to an ignorant 14 year old?

If you're talking about the Conditional General back in the 50s/60s, Cecil, it's common knowledge that FCC hated to give those things at a distance: they didn't want any hanky-panky, or the mere suggestion of it. And that leads to the second generally acknowledged point that gaining a Conditional General was tougher than gaining the General Class, i.e., it was a tougher exam.

I'm not up on the latest, Vince, but the 1957 ARRL License Manual contained 25 pages of study material for the Extra exam. When I took the Extra exam in early 2000, the ARRL Extra Class License Manual was 359 pages. An increase of 1400% in the number of pages in the license manual doesn't sound like much of a reduction in requirements, Vince. I'm not convinced that the theory requirements have been reduced at all. For instance, there were absolutely no questions on transistors, digital circuitry, op-amps, or Smith Charts on the 1957 Extra exam. Did Vic Clark predict that?

Regarding the code requirements, they are back where they started. Isn't returning to the past what you want?

Dr. Williamson, PhD in EE, is getting by just fine without an HF license, Brian. Thank goodness, being a nocoder doesn't prohibit him from sharing his electronics wisdom around a campfire. Consider what the world would be like if all the nocoders, like Einstein, were prohibited from sharing

their knowledge with the rest of the world.

Doesn't matter how many pages, Cecil. When the exact q and a's
that will appear on a test are known beforehand, we no longer
have an exam, by definition.

>Regarding the code requirements, they are back where they
>started. Isn't returning to the past what you want?

Knowing the basics of communications and theory is what we strive
for, Cecil. A rare commodity for the typical Amateur today.

> the FCC have given me the Extra for working so hard to get there? :-)

You should've been with me, Ed. I was drunk as a skunk stumbling around San Francisco with my girlfriend when I saw the federal building. On a whim, I took the advanced exam and passed. To this day, I have no idea what was on that exam.

--

It merely formalizes that which we already knew. You either kiss up to
the NCTA, disregarding their cheap shots at code supporters, and toe the
HQ accepted line WRT code and code testing, or you're persona-non-grata
at HQ.
Your presense might 'alienate' a no-coder and "*force*" him away from
plunking down his money on a membership. Got it, Larry?

Hey, there's no requirement for anyone to send at all! And no requirement to copyeither, if you can find some VE who will certify that you did.

Good luck on this one, and all future similiar ones, now and then.

Hey, whatta great marketing idea! One - each Nocode Tech license in each McDonald's Happy Meal! Sure to draw the kids interest!
"What's this, Gramma? What's a ham radio license? Oh well, just some more trash, toss it with the rest!"

As far as the good Dr. himself is concerned, if he has no interest in HF ham radio, and is perfectly content to remain a nocode Tech, that is indeed his privilege and right, and never would I consider him to be an underachiever.
You, on the other hand, have bitched nonstop about the code test from the first time I read rrap, and continue to do so in the name of Dr. Williamson, thus dragging him down to your own personal underachiever level.

If I was him I'd consider you as a former friend.

I couldn't agree more, Ed. I coach and tutor HS kids (volleyball, English and social science) and those kids think that a 150-page paperback is a huge reading assignment! When I was in Boy Scouts, ham radio was introduced to us as something fun and exciting; listening to a local ham's gear and hearing him transmit was so cool. Plus, it seemed that a Novice ticket was definitely something within our reach as 12-14 year olds. I know that even the Conditional seemed possible.

Perhaps, if ARS hopes to recruit young members to its ranks -- swing the pendulum back a bit (how's that for keeping on thread!) -- perhaps we need to revive the Novice license. Maybe not as it used to exist, maybe exactly as it existed. I know the thrill and possibility of talking to someone across the country or world was most likely a lot more exciting to a kid in 1978 (*I* was excited) than it is today (what with kids having cell phones, pagers, the i-net, etc, etc). But I think that a limited, short-time Novice ticket, rather than the current no-code Tech license, might draw more youngsters into the service/hobby/art.
Plus, give incentive to advance in skill and knowledge.

Give 'em a 30- or 40-page booklet and CD-ROM/cassette tape that will have everything in it a novice would need: basic theory (electronics, radio, propogation), advice for learning code, sound files, FCC rules, *history* of ham radio, some very simple construction projects, description of modes, some freeware programs. *And a bibliography*, so they can find out more on their own, both a book and cyber list. Plus, contacts of major clubs in every state. But above all, keep that booklet under 50 pages.

Thoughts?

73,
Dave - kd7mpd

OK, I'll bite...

There is no Jack Campbell, from Ohio, listed on QRZ.   He is no ham but knows code. This illustrates that "no ham = no code" is false. Commutatively, this proves the falseness of the assertion: "no code = no ham".

;-)

I think I know just the crowd for him. I worked with a few PhD types in
West Africa who would make great pals for him. They could sit around
and call each other "doctor"--maybe even spin Mensa yarns.

Hansl:

CorrecKt. Dick put the verb/predicate before the subject. It should
read, "The underachievers are those who demand the privileges
without meeting the qualifications." The word "only" is superfluous.
The problem is, in today's semi-literate society, Dick's original
sentence would probably pass muster in any high school English
class!

He doesn't call himself "doctor". He looks like a gold prospector,
complete with long hair, beard, and a black powder six shooter.
He wouldn't be caught dead with a bunch of MENSA nerds.

I just thumbed through my latest QST and didn't find anything even
remotely resembling a "ham/freebander's bitch column".

The rated sound at the sight is 128 db and it is mounted on average 50 feet
above grade.

Has he been talking to that black lady on the commercials (the one with the Tarot cards)? If so, I wonder what secrets the Tarot cards have revealed about me (boy, lets not go there)?

However, if someone really wants to find out some interesting radio related stuff about me, they probably should talk to that guy on the sci-fi channel (the one who talks to the dead). Since my father knew more about electronics and radio, he could probably provide some really interesting stuff about me. He always did hate the way I soldered.

The sirens are rated at 128 db at the site, and are mounted roughly 50 feet above grade. The topo is flat to slightly rolling with mature desiduous trees. Nothing has been repainted and there are screens installed to prevent birds from nesting. Would appreciate any input. I'm thinking that this is something not well covered in the research.

In the latest E-Mail ARRL sent out they are praising a CBER for using CB, I thought there little Tag Line at the Top of QST said: "The National Association for Amateur Radio", maybe they need to change it to" The National Association for Amateur Radio and CBers."

Larry, you've written more about the code testing issue than anyone else I can think of in this newsgroup. I know for a fact that you have written far more than I've written on the subject. In fact, it would not really surprise me to learn that you have written more on the subject than I have on everything I've ever discussed in these newsgroups combined. In other words, my friend, when it comes to whining about CW (testing, etc), you are the undisputed world champion.

Given a choice, I'd rather know more about spelling and grammar.
With those skills, ham radio itself is much easier, as is most
everything else in life.

A teacher today actually hands out an assignment for high school kids to read a 150-page paperback? Boy, I bet that teacher is not very popular.

> Perhaps, if ARS hopes to recruit young members
> to its ranks -- swing the pendulum back a bit
> (how's that for keeping on thread!) -- perhaps
> we need to revive the Novice license.

I agree. But it needs to be a license truly designed for kids, not a license designed as an entry level license for adults like the old Novice was. This license should be packaged and targeted solely at kids in the age group we're seeking (with the interests of a kid that age featured).

> Give 'em a 30- or 40-page booklet and CD-ROM/

Hands on activities are important also. It is too bad that we can't figure out a way to include an electronics kit (like those at Radio Shack - with a stronger emphasis on basic radio) as part of the child's introduction into ham radio.

You'd think it was worse than Hari-Kari! But you ought to see our Senior
Project here at Culver High (enrollment: 140) -- I'll lay my bottom dollar
on the proposition that the kids will see nothing like it in their first
two years of (state) college!   ;^)

Definitely. I think amateur radio in the US and Canada should target
(read: market) itself toward the 11-14 year-old, both boys and girls.
Trust me: at about 15, they lose all interest in *everything* except the
opposite sex.   I don;t know about anyone else, but I'm willing to help
put such a curriculum together. I *love* my service/art/hobby, and I'm
willing to help advance it. While I may not be a technical whiz, I know
kids, and can help out there.

Maybe what you're proposing *is* possible. A "complete kit", of sorts. Add a real kit, like a very simple 60-30 meter SW receiver, to the package. Like the "old" Radio Shack SWL kit (I built one in '77 !!). A little plastic box with components that any adult could help with (the adult is a *big* component, imho), a study guide, and a CD and/or tape. The whole thing could be packaged for (as my used car salesman Dad would have said) the low-low price of $29.99. Dammit, I like it!   :^)   Hell, every Boy/Girl Scout group in the country should be sent these things free of charge by the ARRL. I'd pay double-dues for that.

Funny the ideas one gets from having another continually refer to one as "Doctor". I had the guy pegged for tweeds with elbow patches. Now you tell us that he looks like Yosemite Sam.

QUOTE:

In the latest E-Mail ARRL sent out they are praising a CBER for using CB, I thought there little Tag Line at the Top of QST said: "The National Association for Amateur Radio", maybe they need to change it to" The National Association for Amateur Radio and CBers."

UNQUOTE

Perhaps there needs to BE an organization that can tie them all together? I doubt that either the ARRL nor REACT is that organization, but somewhere in the middle resides the answer.

I disagree with you, Bruce. I believe ARRL should remain focused on Amateur Radio. However, you are welcome to be interested in CB if you wish to continue.

Many of those teaching newcomers do just that. What is on the tests does not limit us in how we help new hams become new hams.

Unfortunately, I bet if ARRL did that and doubled the dues, membership would take a big drop. Nor do I think it a good idea because many of those scouting groups would not have someone qualified to help build that single radio as a demonstration to the kids, so many (most?) would not be used.

If you want to donate one of those radios to a scouting troup, I am sure you

could find one locally that is interested, especially if you also offer to help
get the program going.

Help me out here, Dick. Are you saying that the years I spent arguing with that NCTA about his outrageous conduct on this forum is what proves that I "toe the line" or is it the fact that the NCTA decided to be less destructive in the way he conducted himself that proves that I "tow the line?" I just can't see any logic in what you said proves whatever point you are trying to make about my posts. I'm sorry to be a bit confused, but I can only respond to the words you actually write.

>> >without exceeding its former maximum radiation efficiency.

Part of my confusion was your use of the term "match." I didn't see in the original premise where the SWR was reported as being bad, so the match already existed. I think you mean to say that when you change the feed line, you change the efficiency of the system, not the match.

> I *hope* you're experienced enough to know that an SWR meter placed at
>the transmitter doesn't necessarily reflect what is happening at the
>antenna.

Yes, I am, but it would take a very lossy feed line, unrealistically so, to show a good SWR at the transmitter and have a poor SWR at the antenna. For any antenna I can imagine, it would require tens of dB of feed line loss per hundred feet to show a good SWR at the feed point. I just didn't realize you were discussing unrealisting antenna systems here, Dick.

>The treaty has a provision for countries to do exactly that, Dick.
>I'll bet the Japanese notified the ITU of their proposed nocode
>HF license.

Nope. The JAs do not think their 4th class violates or takes exception to the treaty (S25.5). So there is no reason to notify the ITU.

Their reasoning goes like this: The treaty exists for one basic reason: the avoidance of interference. There are two types of interference to avoid: Inter-service (between amateur and nonamateur), and intra-service (between amateurs of different countries).

Inter-service interference is avoided by limiting 4th classers to only those bands which are world-wide exclusive amateur.

Intra-service interference is avoided by limiting 4th classers to very low power - 10 watts peak on HF, as I recall. Since Japan is an island nation, there are no border situations - no case where a JA station is only a few miles from a non-JA station.

Add to this that nobody has formally complained to the ITU.

This has been going on for decades. It was written up in QST in 1970 or 1971, and it wasn't new then.

wa8ulx@aol.com (WA8ULX) wrote in message news:<20010607231544.19140.00001996@ng-fi1.aol.com>...

> In the latest E-Mail ARRL sent out they are praising a CBER for using CB, I thought there little Tag Line at the Top of QST said: "The National Association for Amateur Radio", maybe they need to change it to" The National Association for Amateur Radio and CBers."

Maybe it's long overdue. If the operator mentioned was deserving of praise...then so be it! Remember, there was a nifty little idea posted here not all that long ago. It proposed that the "disenfranchised" CBers take the ridiculously easy Technician exam, join The ARRL, and enjoy full voting privileges thereafter. So you see, when that ARRL elected "employee" receives an e-mail from that relatively new Tech, asking what their position is regarding 11 meters...he/she may want to think twice before spewing the usual anti-CBer line. Job security often outweighs strict charter loyalty.

The fact is that with the Sega-Genesis/Internet generation not exhibiting the "gee-whiz" attitude toward radio that I was/am familiar with, just who do you think will "inherit" the reigns of amateur radio? Beside the SWLs and scanner enthusiasts, there's only one other demographic group I can think of that exhibits a passionate (if not legal) interest in making international contacts on HF radio via skywave propagation. This group encompasses many SWLs and scanner enthusiasts so it's proportionately larger. I didn't make this up, it's just the way the chips are falling.

The proof is as close as your local 2m repeater. Heard any "breakers" lately? Could this have been avoided?...maybe. Had there been a real effort to reach out to the 11 meter community, perhaps our friend, "Elmer," could have effected the required attitude adjustment. However after years of 11 meter bashing (Much of it well deserved, but hardly constructive.) the ki$$ my a$$ attitude prevails. I've read that AR's GOFs (crumudgeons) are an eternal resource, to which someone responded that they are NOT inehaustable. I agree, "cry and moan" as you please but the "old guard" shall attrite at a much faster rate than the "new guard" will arrive. Not rocket science, just an eternal truth that is often referenced in the same breath along with "taxes." Food for thought. No need for flames, that won't stop the process any. Maybe that guy, Elmer, has got a better suggestion?

> maybe exactly as it existed.

Can you just imagine the insults and derrogatory terms that those who claim that going from a 4-page study guide to a 200-page study guide for the entry-level license is dumbing down would use if we went from a 200-page study guide back to a 4-page study guide?

Even more important, the FCC has decided that it doesn't want a lot of classes of license in the US, so I don't know that the likelihood will actually be to add back a true entry-level license, as was the Novice.

Fortunately, part of the reason that the Novice license was dropped, even after it was made harder by far than the one I took to get started, is that most people were choosing the more comprehensive Tech test as their entry point into ham radio. That does indicate that people were entering ham radio to learn and do as much as they could. Unfortunately, that didn't include many of the 13 year old kids that used to be attracted to the Novice. I guess it takes a few more years under one's belt before one is willing to tackle a 200-page study guide to be considered a beginner in ham radio.

>I know the thrill and possibility of talking to
>someone across the country or world was most likely a lot more exciting to
>a kid in 1978 (*I* was excited) than it is today (what with kids having
>cell phones, pagers, the i-net, etc, etc).

I'm not so convinced of that. Just as an example, when I was a kid, wired telephones were as common to me as as a cell phone is to a kid today. I could pick up the phone and call the kid next door without even thinking. But what did he and I do? We got those tin cans and a taut wire and made our own. The thrill of *duplicating* a feat that can be done with the technology of the day is still there, and I have seen younger people get excited to know that I can talk to Siberia from my car on my way to work. The thrill of sending out an anonymous CQ and getting some exotic country in response will still get them every time.

73,
Ed Hare, W1RFI

> anywhere near that performance?

If memory serves, the 756 PRO got to about 120 dB BDR and maybe 95 dB TTIMDDR. MOST analog radios don't perform quite that well.

These DSP chip sets are not being developed for Amateur Radio; they, and SDR, are being used in "real" radio technology. It is not even a question of cost, because I don't believe they are the most economical approach. They offer advantages in flexibility of design and use that simply is too difficult to obtain with analog components. That 756 PRO has filters that will literally remove a signal 200 Hz away to the point that you can hear his keying sidebands but not his keying.

I think that the future of radio will indeed be found in DSP and SDR. Even within the amateur radio community, look at what is being done with the DSP-10 and/or soundcard-based radio systems. A single radio can be used on a new mode without internal change. Just download a new radio and have fun. Cool!

Some CBers have always migrated to amateur. It's nothing new, and it tended to select those who had
a bit more curiosity about electronics and who were prepared to invest a little effort. CB requires
absolutely no effort to do it legally, and only minimally more to do it illegally. We may already
have too many licensed amateurs who are unwilling to invest the effort, and I'm not at all certain
that sheer numbers will impress the frequency gods so much as quality of use.

What the heck do "demands" have to do with underachieving or overachieving? Demands have absolutely no power without something tangible to back them up. The French commoners made demands for years and nothing happened until they stormed the Bastille. Are the r.r.a.p NCTA folk going to storm the FCC Bastille?

So how would *you* explain how grounding the coax braid 6 feet from the antenna base vastly improve radiation? Imagination?

I don't believe that being a prolific writer equates to "whining".

I went Funk & Wagnalls porch and looked it up, and it talks about
"complaining in a childish and undignified way, as in NCTA (see
also NCI)".

Funny thing about those guys. No matter when it was, ham radio started

being dumbed-down right after they got their licenses. What is the
obvious implication if ham radio was smartened-up before they entered
and dumbed-down after they entered? :-)

--

cheers, Cecil

One time, I went out to a new tech's house to see what was wrong

with his new 2m antenna. He was using 200ft of RG-58. :-)

That could pose a problem, especially if the antenna was 220 feet away.

Depending on band and preamp selection, the QST review sez 120-127 dB
BDR
and 95-88 dB two-tone-third order IMD. MDS -127 to -141 dBm

> MOST analog radios don't perform quite that well.

Most "analog" HF ham rigs don't cost anywhere near $3600, either.
>
> These DSP chip sets are not being developed for Amateur Radio; they, and SDR,
> are being used in "real" radio technology.

Amateur radio is not "real" radio technology? Who you quoting, Ed,
Chairman Lennie?

> It is not even a question of cost,
> because I don't believe they are the most economical approach.

Then what is it? Most hams do not have three and a half big ones to
toss
around on an HF rig.

>They offer
> advantages in flexibility of design and use that simply is too difficult to
> obtain with analog components.

uh-huh. They also offer a new gimmick. I agree with W3RV: See what the
boys at the top of the Honor Roll, and the contest scores, are
running.

> That 756 PRO has filters that will literally
> remove a signal 200 Hz away to the point that you can hear his keying sidebands

> but not his keying.

$3600 is a lot to pay for a notch filter. And such a filter makes no difference if the rig is overloading because of a signal outside the audible passband.

>
> I think that the future of radio will indeed be found in DSP and SDR.

Part of the future, sure.

> Even within the amateur radio community, look at what is being done with the DSP-10 and/or soundcard-based radio systems. A single radio can be used on a new mode without internal change. Just download a new radio and have fun. Cool!

Yup. Better yet, "write" a new rig description and do the same.

My point is simply that some of the much ballyhooed rigs like the 756PRO are not without their tradeoffs, even at their top-drawer price. Much of what is being pushed as "new technology" is basically bells and whistles, not real radio performance or truly new features (like being able to run PSK31 or PACTOR 2 right out of the box with no addons except maybe a $10 keyboard).

--

You wanna know one of the things that turned me on to ham radio as an 11-12 year old kid? Simple - pictures of hamshacks with simple, often homebrewed rigs and walls covered with QSLs from all over the country/world. Plus the ham who had done it all, seated at the controls. The message was simple: "This could be YOU!!" And by age 13, it was!

The most impressive shack pictures, to me, were those with modest rigs, but lots of QSLs, because they had the greatest chance of becoming reality for me.

I think the same sort of thing is what is needed today, if we are to attract young people. Show them what they can do THEMSELVES with simple gear and some basic skills. IC-756PROs will not do it.

73 de Jim, N2EY

why do they call it the "PRO" when it's supposed to be a ham rig?

Hi Gary,

It's unfortunate, but true. The CBers to which you refer ("those who had a bit more curiosity about electronics and who were prepared to invest a little effort") appear to be the ones most likely to gravitate to AR. Some will do this for the right reasons, others will not. Here on suburban LI, NY, I've found that the majority of "freebanders" (Gosh, I dislike that term.) in the late 70s and early to mid 80s were of the "techno-nerd" variety and were simply getting away from the herds of AM lids that had started to prevail. Now that the prices of "export" and 10/11 meter rigs have dropped dramatically, the general populace has availed themselves to the 11 meter "freeband." I'm not arguing right, wrong, or legality here...we all knew/know the score. I'm just setting the stage, so to speak.

When I speak to certain amateurs of the younger ilk, I've noticed that once you get them to "drop their guard," they'll admit to "dabbling" in a past life. (Certainly not all, but generally the aforementioned 70s/80s crowd.) These are the guys who came to amateur radio for the "right" reasons. It was the logical natural progression for those interested in international HF contacts via skywave propagation and/or good general radio activity. (Friendly rag-chewing.) They were the "legal" CBers that found the extra RF "real estate" and eventually grew into AR and "got past it." (Much like many others need to do.)

Now, I know guys that have "grabbed" their ticket because it exempts them from the recent "local LE CB legislation," as if that were really necessary. They think it's cool that they can buy that Texas Star HDV350 "CW Transmitter," mod it for 10/11 meters, and connect it to

their modified RCI-2950DX to be displayed prominently in their vehicle
without fear of a local law enforcement officer "hassling" them. That
is an example of the "wrong" reason. It's sad, but it's reality. Even
sadder is the fact that AR, itself might possibly share the blame for
this. Had some of these yo-yo's been approached somewhat civilly
rather than beaten over the head with the preacher's baseball bat,
they might've been more receptive to the "Elmer's" approach. Either
way, here we are and all the complaining and whining in the worlds
isn't going to change it now. After all, the FCC just told us that
"it's on us" re. AR, why should we believe that 11 meters or CBers are
a higher priority to them than AR. Happy about this?...I'm sure not.
Take it easy.

HAW!! That's a GREAT one Ed!

Lessee... the rig in question:

- Must be assembled from a kit and aligned before use.
- Comes with only CW as stock. Other modes require options.
- WILL NOT transmit in the two MHz below 28.000 (and you can't clip a wire or diode to make it do so)
- Really does a nice job on CW. And other modes, too. No AM, though. Sorry.

Pocket protectors? Sounds like a good source of mojo.

I doubt that very much Bert. A good many of those so called "Freebanders" and others using amplifiers etc. do so for the "thrill" of getting away with it. They have zero interest in getting in to AR because the "thrill" of law breaking would be gone. How else would you explain why the technically more astute among them refuse to get a ticket regardless of the volume of offers of help, and even equipment at times? I have seen it myself, it's the thrill of being a pirate operator, sort of like the modern day antihero. For these people getting a ticket so they can shoot skip, run high power, legally, would take all of the fun out of it. The only thing you can do for these people is pull the plug on them. Then on the slight chance they do get licensed, do we really need to add to the problems on lets say 75m, where high power and language seem to be a bit out of control?

You won't find any Hams with sympathy for illegal CBers in this news group
Twisted. Particularly if they operate on any of the Ham bands like 10m.
You're out of your element here. You want to make any of your lame arguments
here about why what illegal CBers do is OK, well go right ahead. You will
serve to under score the point I made in my last post.

Hi Leland,

I disagree with you. I know many 11 meter "enthusiasts" that weren't the thrill seekers you describe. While I'm sure there are some, perhaps many, who fit that bill...there are just as many, if not more who are just enjoying what they view as a harmless form of hobby radio. Like I said before, I'm the last person to judge any "freebander," however, there are a great many miscreant whom are more than deserving of "Federal" attention. I checked my judicial robes at the door when I talk to any 11 meter "enthusiast" because I know that gets us nowhere...and quickly.

"The only thing you can do for these people is pull the plug on them."

Take your best shot, Leland. If you can make a dent...God bless you. I must advise you though that an older "uncle" of yours with much deeper pockets already has a thirty plus year old model for you to study. It's been a demonstrably dismal failure and can no longer even be classified as a work-in-progerss. "Uncle Charlie" has a far better track record with licensed amateurs than with "freebanders," and the "freebanders he DOES nab usually turn out to be hams...go figure?! Please don't take my word for it, it's all there in the FCC "enforcement" letters that are commonly displayed on various AR websites. But this is all neither here nor there. We can disagree here on a NG, but it's out in the field that it's "going on." Perhaps it'll become more apparent post 2003. (I didn't want to actually mention that lest this deteriorate into another "you know what" banter thread.

"Then on the slight chance they do get licensed, do we really need to add to the problems on lets say 75m, where high power and language seem to be a bit out of control?"

I think there's more than a slight chance and I wholeheartedly agree with you re. 75m. Shouldn't the league and AR be more concerned with it's own back yard than 11 meters? Take it easy Leland.

73 de Bert
KC2HMN

Saw this on a bumper sticker: (LI, NY)

"I Work 11 Meter DX...& I Vote!"

(They're attacking from within the law and using their noodle rather than an amplifier, nice approach. Illegal thrills no longer needed and checked at the door.)

CW is a gay mode, that explains why it's the AIDS of ham-radio. ITU wants to maintain CW ? That's only because they are all gay at the ITU. It's time to kill these gay dictators.

All CW operators are gay, that explains that they like to be together among old queers. An interesting forum in psychiatry said that gay people like CW because jerking their "key" is a "transfer" of jerking the dick of their boyfriend. Amazing ? No, just reality ...

Now you understand better what is really CW, it's not a radio mode but just a virtual homosexual relation. And when you will hear K3LT and others speaking of CW, you will laugh more :-))

>for Amateur Radio", maybe they need to change it to" The National Association
>for Amateur Radio and CBers."
>

True Trivia Fact: For most of 1921 and part of 1922, QST covers bore the words "devoted to citizen wireless" or "devoted to citizen radio". This was in response to the idea that the words "amateur" and "ham" were derogatory.

Now THERE'S an idea: match up the various rrap denizens with cartoon characters! What a great game!

Lessee:

Bugs Bunny
Daffy Duck
Porky Pig
Elmer Fudd
Tasmanian Devil
Road Runner
Wile E. Coyote
Foghorn Leghorn
Dawg (in the F.L. cartoons)
Chicken Hawk
Speedy Gonzales
Sylvester
Tweetie
Granny

>applicants. The FCC examiners sat at the desk the entire time. If fairness,
>when I took my General in the 60s, I think there were 6 of us there and the
>examiner watched us pretty closely.

All right, all right, if we're gonna tell FCC exam session stories, I'll tell mine.

First time I went for General was in early summer 1968, age of 14. FCC office in Philly was a subway ride away (plus a half mile walk at each end of the subway ride). I'd had the Novice since October of 1967, and thought I was ready.

Back then a school kid like me had at most 3 or 4 test opportunities a year, at best. This was because you had to wait 30 days to retest if you failed, and the FCC office only gave exams on Monday, Tuesday and Wednesday mornings. So you got a maximum of three chances in the summer and maybe one chance over Xmas vacation, IF the holiday didn't close the office. Taking the exam cost $9 back then - with inflation, that's $40-50 of 2001 money.

There were about five of us around the code table that morning, each with our own set of headphones. The examiner watched us all closely, and gave explicit instructions about how to do the test. When the code stopped, it was pencils DOWN! Each of us also had to send using a straight key. The code came from a little machine that read punched paper tapes. Both the machine and the tapes were kept locked up. Speed was changed by using different size drive rollers. The copy was plain language text, not a ham QSO.

I tried the 13 wpm code, but failed. The reason was not that I couldn't copy code, but because the examiner could not read my writing well enough to find the required 65 consecutive correct characters. The Palmer Method handwriting beaten into us by the IHM nuns was of no help in CW work. No retries back then. I know if I'd had a moment to clean up my copy, I would have passed, but that was against the rules back then.

He could find 25 characters in a row, though, and allowed me to take the Tech/General/Conditional written. I passed easily, and when the license came in the mail I was both a Technician and a Novice, with two callsigns. The band used determined which callsign I used.

So I went home and focused on the code - and also taught myself to block print at about 30 wpm. Soon copying the 18 wpm W1AW bulletins solid was duck soup.

Late that summer I went back to the FCC office and tried again. Another $9 and another subway ride. Same setup as before. This time he had no trouble reading my big block letters. Sending was a snap, and I was a new General.

But it wasn't over. The Examiner said "why don't you try the Advanced while you're here?" One simply did not say "no" to The Man back then, so with absolutely no preparation I tried the Advanced written. Passed it easily. Went home to wait for the license to come in the mail (no instant upgrades - you waited 6-8 weeks for the FCC paper machine to grind out the actual license).

And began that ight to work on the Extra. A prospective Extra needed two years as a General, Conditional or Advanced to even try the Extra test.

Fast forward to late summer 1970. I was there at the first session after the two-year wait. Examiner came out at preciely 8 AM and asked "anybody here for 20 wpm?" One hand - mine!

He went through the whole ritual of explaining the test and the requirements to pass. Unlocked the drawer and took out the machine and tapes, hooked it all up, and started the machine.

I copied the code perfectly - in fact, it was easy! Much easier than trying to copy traffic through summer QRN or winter QRM. He watched me for a while, then came around behind me and looked over my shoulder while I copied.

After a minute or so he went over and shut off the machine. uh-oh - they were supposed to give 5 minutes! What was up?

"Pretty easy, huh kid?" asked The Man

"uh - yeah", I mumbled.

"It oughta be - that was 13! Here's 20!"

And he quickly slipped a different drive roller into the machine and started it up again! The code this time was a lot faster, but I kept up and after the 5 minutes it was clear I had the required 100 consecutive correct characters down. I sent the required 20 per on the straight key for about 30 seconds before he said "OK, kid".

The written was no problem, and I walked out of there a new 16 year old Extra. 31 years ago come August. Doesn't seem that long.

Back then, a teenage Extra was no big deal. There were 12 year olds with that license.

>subway ride). I'd had the Novice since October of 1967, and thought I was
>ready.

Subway? You got to ride the subway? In the summer? Really!

Back in 63 we had to take the tests in Fargo, ND in November or February only
from a "circuit rider" FCC agent out of St. Paul. We didn't have no steenking
subway from Twin Valley, 30 miles away. The trip was over snow covered prairie,
uphill both ways, on our hands and knees, 35 degrees below zero. We didn't
need no steenking subway! (Well, the circuit rider part is true anyhow!)

Welp, that leaves out the CBers, they're the about the most
conventional of all places to find new hams. I rather suspect that a
very large number of the posters in this NG have at least some CB
experience including a flock of the 1x2 OFs. I can name two Extras who
live in the town of 4,500 I come from who came out of the CB craze of
the 70s. Ham radio chatter is all over 27mHz, take a listen, they know
who we are and what we do. And how we do it. Hooboy do they ever . . !

Yeap, a kind word and and a demonstation usually helps nudge things right along. I can testify to that also. I loved radios al my life. My late father was a trucker and had CB radios around the house along with the "Lean-yeer" to help out. One day we got a visit from Uncle Charley of the Federal Candy Company fame which "persuaded" Pop to get get them things outta of de house (along with a $250 fine). My late mother talked the FCC man out of the fine and promised that she would see to it that this didn't happen again. (It didn't).

A simple nudge caused the family to enroll in a ham class and get righteous. What some of our 11 meter brethern don't realize, is that the so called "thrill" of the pirate world can lead to problems like they never imagined. A local down here has been fighting a $10,000 NAL and the lawyer he has retained has managed to keep it hush-hush since he has other licenses which could be in jepardy. Most FCC actions are not reported to the public unless they are publicly ajudicated. Most are PTI (Pretrail Intervention) stuff which keeps them private and off record unless a further violation takes place.

good hams are created, not born.

Only thing is, I think there is a bit of difference between posting in the
interest of debate, and posting through contemptuous anger, such that the
sneering can almost be heard through the monitor of a computer.  It is the
sneering, seething anger that "posseses" those who are so wrapped up in just
plain anger.  Anger controls and overpowers those who let it.  Goodness
knows, I let myself get wrapped up in it before.  Then, I considered the
source(s).

As someone aptly often says, your mileage may vary.

The way I see this discussion is that we're dueling over the realtive merits of mostly high-end DSP xcvrs vs. mostly conventionally "filtered" somewhat DSP high-end xcvrs. The front-end dynamic ranges, BDRs, TTIMDs and the rest of that geekery as they relate to comparisons between the 756 Pro DSP thingey and the "archaic" INRAD and Collins filtered competitive FT-1000MP Mark V are very similar according to the ARRL lab reviews of both.
>

You might note that the selectivity nummers for the 500hZ filters in the lab review of the 756 Pro are significantly better for the 756 than they are for the Mark V. Duly repudiated below out on the bands. Go figger, Ed. When was the last time you sent yer lab instruments out for new calibration stickers Ed?? I wuz gonna say something really nasty like sending yer reviewers out for recalibration while yer at it but I'll restrain myself.

>

Copy-pasted from same: 756 vs. Mark V
>

But features don't tell the whole story! Although the Mark V doesn't do as much as the 756PRO, what it does, it does brilliantly. For instance, I checked the s-meter sensitivity on 160m, 20m, and 10m on both radios with my HP-8640 signal generator. An S-9 signal is supposed to be 50 uV. However, S-9 on the Icom wandered between 72uV and 96uV on the three bands (no preamp). An S-9 on the Mark V (no preamp) was exactly 50uV on all three bands -- a minor accomplishment, admittedly, but a sign that the designers paid close attention to detail.

In A-B comparisons, the audio on the Mark V always sounded better -- crisper, and without any of the tell-tale hollowness of DSP processing. CW signals on the Icom sounded a bit mushy.

The Mark V was also a clear winner in selectivity tests. In fact, I've never before heard a receiver that seemed almost to have no "skirts" on its filters. CW signals just vanished abruptly when they toppled over the filter's edge, leaving behind only a few key clicks. The Yaesu's combination of crystal filtering at the 2nd and 3rd IFs, and DSP filtering at the 4th IF certainly seems to work. You're paying top dollars for all that selectivity, but the results are remarkable.

In these tests, I noted that the DSP-based Icom filters seemed to have broader skirts on the wider bandwidths. In one strong-signal test, I injected a 100,000 uV signal into both radios at 28.600 MHz and looked at the rolloff of their 2.4 kHz filters. This kind of test introduces a large amount of "hash" near the signal frequency. On the Yaesu, the signal dropped from full strength (about S9+60db) into this backgraund hash in about 200 Hz. On the Icom, it took nearly 700 Hz for the signal to drop into the hash.

I then tuned the receiver to 28.500 MHz, 100kHz away from the 100,000 uV signal. When I switched the signal on and off, I could hear just a barely perceptible increase in the background noise on the Yaesu. In contrast, the hash in the Icom jumped 20 db above its noise floor when the signal switched on. In essence, the huge signal 100 kHz away didn't cause the Yaesu to bat an eye, but it would have completely obliterated any weak signals on the Icom.

I preferred the tuning of the Mark V over the Icom. The large main tuning knob is a joy. (It's larger than the knob on the FT-1000MP; in fact, it's the same diameter as the tuning knob on the Collins 75A4.) The knob is significantly larger than the 756PRO's knob, and it turns with a velvety feel that is outstanding. The Yaesu's sub-receiver is also better than Icom's. It's truly a separate dual-conversion receiver, with its own filters and tuning knob. The noise blankers and DSP noise filters worked equally well on both radios.

If I had to sum up the two radios, I'd say that the IC-756PRO is a Cadillac and the Mark V/FT1000MP is a Porsche. They're both fine rigs, but intended for different drivers. For just crusin' around the bands or hanging out with the gang on 3865 kHz, the Icom would do just fine. It's not only a pleasure to use, but lots of fun. However, for full-bore competition in the CQ World-Wide DX Contest, or digging weak signals out of a pileup, I'd take the Yaesu in a heartbeat.

End of.

Was the answer 'yes' or 'no'? I don't see either.

In another example of capitalism gone awry, I see "The Fred" has found an on-line accomplice to bilk citizens out of money for something that they can do for themselves for free.

I am VERY disappointed that it was a service as reputable as "QRZ.com". Almost 80% of all testing irregularities are "W5YI" graduates, and I for one would be very gun shy about being associated with such an entity.

Quote from QRZ:

The W5YI-VEC/QRZ online update service costs just $6 and major credit cards are accepted online. The fee includes all taxes and postage. Your new or updated certificate will be mailed directly to you from the FCC.

Unquote.

I see some promise in the kid. But he's GOT to lay off the "All" bit. That
makes for very steenky bait.

I'd start with this:

****
"Subject: Homoerotic symbolism in Morse Code communications"

(You gotta go highbrow to sell this one. This could be from some poor
psych/sociology major who came into the newsgroup for clarification after
stumbling across some "research." Don't use the term CW - it's ham jargon
and a giveaway.)

"I understand ham radio enthusiasts are partial to communicating with Morse Code. Having done some research and learning that the vast majority of hams are male, I did further investigation and came across these surprising findings..."

(Uh-oh. I'm tempted to make up the name of an obscure professional journal here and mention some study pointing to the association of manipulating a key with sexual acts. It gives that good ol' gravitas to the post and sets the hook. But these days you can't get away with much because there's always some debate club weenie who'll ask for a specific citation. Then you have your work cut out for you. On the other hand, the kid's got a good idea saying he heard about the gay/CW connection from a forum of some sort. Much harder to pin down but not as authoritative.)

"...their arguments were that the act of pulling and pushing the Morse Code key is not only a symbolic pleasuring of the other, but indeed Morse Code communication is a metaphor for the secret language that exists in the wider gay community."

(Went with the "forum," so I have to pull out all the stops.)

"So I'd like to ask those in this group: Do these theories agree with your experiences? I know little about ham radio itself and was surprised it still existed."

(Heh, heh. You can't coach inflammatory rhetoric like that.)

"Luigi Corbaccio"

(Yeah you gotta get the name right. Even if it's a legitimate alternate spelling. You don't want to draw attention away from the message.Wait a minute. Never mind. Scratch that one.)
****

Hope this helps.

Do you know of any other business that will handle the paperwork of filing a federal application for you for $6.00? I have been the FCC ULS site and it sure is a confusing mess. Fortunately, ARRL performs the same service for ARRL members, for free, so when it is time for me to renew, I am going to go upstairs and ask the VEC folks to do it for me.

Of course not. At this point, I'd just be thrilled to pass the 5 wpm test. In fact, based on my experience with the code program I downloaded last week, I doubt I'll ever get up to the speeds you're talking about. Any clues? While I can recognize individual characters when they're repeated alone, once the program starts sending groups of characters I've supposedly learned, all those beeps quickly start sounding the same to me. I don't think I'm any closer to taking that test now than when I started. Aaaggghhhh!

As a fellow AOL sufferer, you have probably watched Bruce's peeing in the AOL

"Ham Radio" forum sandbox until everyone else simply stopped coming. It appears he is just trying to do it here. Fortunately, there are enough other participants that I can safely skip over his posts and still have plenty of posts with meaning and content to read.

Can you offer any examples of this "usual" anti-CBer line? Although I believe that ARRL should remain devoted to Amateur Radio, I also bear no animosity at all against the legit CB operator. Why should I?

The ones I do have a problem with, personally, are those that are NOT CBers but choose to operate outside the CB bands or those using high-powered amplifiers.

I have heard from a number of hams who are resolving RFI problems with neighbors, but do not recall even a single instance of a "CBer" with an amp asking for my help. Now, admittedly, most CBers would probably not turn to ARRL for help, knowing that our technical help is a membership service, but I have noted that about 15% of the hams that contact us with a question are not current members. It stands to reason that those that think they are above the law wrt radio operation would probably not be too ashamed to ask ARRL about RFI if they wanted to fix it.

Actually, from what I can tell, the 2950DX is not nearly as easy to mod as the non-DX model. The mods listed on the mods sites for the "new" 2950 did not work on the one I checked in the Lab. If you have any info to the contrary, let me know.

the thrill
> seekers you describe. While I'm sure there are some, perhaps many, who =
fit that
> bill...
```

Which is what I had originally said. I never said "all" if you go back =
and reread that post. Those are the "problem" outlaw CBer who will never =
be interested in Ham Radio, or if they do with end up being a "problem" =
Ham.

>=20
> "The only thing you can do for these people is pull the plug on them."
>=20
> Take your best shot, Leland. If you can make a dent...God bless you. I =
must
> advise you though that an older "uncle" of yours with much deeper =
pockets
> already has a thirty plus year old model for you to study.

If they had deep pockets there would be little problem now. If you read =
many of the posts on this news group you will quickly learn that the =
major problem with FCC enforcement, either Ham or CB, is the lack of =
enough funds. That can be changed by applying pressure to our congress =
person(s) to get them to allocate more funds to the FCC with the express =
understanding it will be used for enforcement of rules and regulations.

> It's been a=20
> demonstrably dismal failure and can no longer even be classified as a
> work-in-progerss. "Uncle Charlie" has a far better track record with =
licensed
> amateurs than with "freebanders," and the "freebanders he DOES nab =
usually turn
> out to be hams...go figure?!

Hams have been begging the FCC for a long time for better enforcement of =
activities on our bands, so now we have it. So the fact that the FCC log =
shows primarly Hams getting nailed should not be a complete surprise. =
The same can't be said so far about 11m, other than the option that =
local police departments can enforce Part 95 rules at their convenience.

> "Then on the slight chance they do get licensed, do we really need to =
add to
> the problems on lets say 75m, where high power and language seem to be =
a bit
> out of control?"
>=20
> I think there's more than a slight chance and I wholeheartedly agree =
with you
> re. 75m. Shouldn't the league and AR be more concerned with it's own =
back yard
> than 11 meters? Take it easy Leland.

That's what I like to call the "ostrich syndrome" that seems to plague =
many Hams. Consider that there are specific rules in Part 97 due to the =
use of Ham equipment illegally on 11m, namely H.F. amplifiers, which =
places restrictions on equipment design and sale. Now we are seeing more =
activity on the 10m band due to freebanders. This is the result of the =

increase in availability of cheap "export radios", which can be modified =
to operate on both 10m, 12m and 11m too. Now the question is just how =
bad, or how long, does the problem have to be before the Ham community =
pulls its collective head out of the ground and do something about it? =
What is going on with the 11m band is just a sample of what is spilling =
over in to the Ham bands. If we don't watch out the "Freebanders" will =
continue to setup camp on the lower end of 10m, particularly if there is =
no enforcement action. The same will happen on other bands too, where we =
will have to deal with bootleggers that have no fear of the law.=20

As can be easily seen, the clueless automatically gravitate to labeling anything not totally accomodating to the dumbing-down to "anger", with no thought whatever to any possible disappointment, disgust or disallusionment of those who have seen the ARS taken from its place of high regard and real value to becoming a not-so-glorified version of DC to Daylight CB.

I suppose that is to be expected, and indeed it is.

Ed I know you not as Dumb as you try to act at times, but since  you want to
play that way, if the FCC has less an Less to do with Ham Radio then it would
appear they would be using less resources, which in turn would save them money,
which in turn would make them money. But my comment was not that the FCC would
be making money on this, and you know it also, just another diversion on your
part.

You're welcome. Of course, that was about 35 years before the service known as "Citizens Band" began.
>
>>True Trivia Fact: For most of 1921 and part of 1922, QST covers bore the
>>words
>>"devoted to citizen wireless" or "devoted to citizen radio". This was in
>>response to the idea that the words "amateur" and "ham" were derogatory.
>>
The name was a dud - never caught on.

Old issues of QST are often auctioned on eBay. Most sellers include a picture of the cover, so you can verify this fun fact easily.

First law of engineering: "If it happens, it must be possible".

It happened exactly as described. That was a different era. Different processes and different standards. Were the tests "harder" then? Depends on one's point of view.

I know something about those "cushy jobs" at Hq. Frankly, I don't have anywhere near the qualifications needed to work there.

HAW!!

This 2-land call is from the time I spent in the Finger Lakes region of New York State. Had the territory from Syracuse to Rochester. Two seasons up there: winter and the Fourth of July. A typical Labor Day activity was putting on the snow tires. We bought dry gas by the case and rock salt in 100 pound bags. Only real problem was lake-effect snow.

True.

>...but they strongly object to the only thing that ensures
>that CW can continue to be used by a significant portion of hams.

That is YOUR opinion only. If such becomes true, it will because
YOU and other devotees of CW use gave up on it. Strange that
all sorts of past technologies are kept going by loyal groups
of supporters without any mandated requirements needed
to recruit new participants...archery, muscket shooting, manual
shift automobiles, etc. Why shouldn't morse code use be in
that same catagory?

>This is one reason why I've always recommended total grant

More that the proposal wasn't valued as you see it.

Duh, get to understand there is a difference.  S25.5 imposes
the CW requirement on the participating treaty countries.  If and
when S25.5 is deleted from the treaty, the issue becomes an
individual country by country decision as to dropping whatever
code testing they have in place.  The current ARRL position
simply indicates they will not oppose deletion of the code
requirement from the treaty, but they will oppose the deletion
of code testing as a USA requirement.

Diversion? The FCC did NOT need to restructure last year to save
money. Indeed, the increase in enforcement via Mr Holingsworth
has probably offset any net savings (assuming there have been any).

Amazing that anyone "complaining in a childish and
undignified way" can standup to FCC scrutiny via
comments filed and/or ex parte presentation.

You must read different versions of QST than I do.

>What I saw is that the ARRL BOD will continue to support code testing as an FCC
> requirement. But that policy is open for review and change at any time.

How does that change what Ed said? Any individual policy is always
subject to change. All any BOD can ever do is to adopt a given
policy that stays in effect until a future BOD meeting might change
it. Even the USA constitution isn't beyond being changed by
future amendments.

>And anyone who looks at the big picture can see the problem: FCC has repeatedly
>said that S25.5 is the ONLY thing that is keeping code testing alive in the
>USA. Their exact words were that code testing serves "no regulatory purpose"

Sorry Larry, you don't get to retain a code test requirement
just because YOU think that is something to do. The
argument/rational you raise above has been found uncompelling
by the FCC and has not found favor with a great many of
the nations around the globe.

The fact that YOU needed an afirmative action incentive
to get you to whatever code level you are at does NOT
justify the requirement either.

Cheers,
Bill K2UNK

Very well put and so full of facts, and are one source for helping to stop

all this is more interested in selling Magazines and T-Shirts.
 And then of course we have ED telling us about the 400Million Q&As that the new people have to learn, and how its so impossible for them to Memorize these Q&As, If ED would take the time to listen to the new ones he would hear it from there mouths, but Im sure he would say they were lying.

Well good morning, Dick,

To answer your remark, YES! I DO see it as perfectly proper to stick my CB "noise" (Is that noise or nose?...both work, I guess.) into ham radio. Very UN-Typical! You don't like it, do you? Especially now that The ARRL is actually making slight overtures of inclusion with it's MOU re. REACT or even praising an operator from "the megacycle above 27."

You know my position, Dick. When the league stuck it's nose into a(n) CB/11 meter affair, namely RM-9807, it made it "perfectly proper" for me to stick my nose (or "noise") onto ham radio. Thank you very much. I wont re-hash it for you, you do the research on your own time, not mine.

Dick, I'll be quite blunt with you. I've read a great many of you replies and, quite frankly, I find you to be rude and obnoxious. Your replies are usually just that, rude replies that attack the idea of the original poster. Very rarely have I seen you post an idea designed to help the overall situation. You display the callousness of an individual who's been a bit jaded by life's more unpleasant experiences, an ex-soldier or law enforcement officer perhaps. Well, I'm talking to you not as a CBer, ham, or somone from "the megacycle above 27," but as a person. Try being nice, it really doesn't cost that much and it usually pays dividends.

To get back to your original statement. If you are representing "ham radio" with the abrasive attitude you often display, then YES...I am directly "in your face." Times are changing, Dick...lead, follow, or please egress the dance floor! (and make way for those who really want to enjoy the dance as opposed to just complain about the "new" music!) Take care and 73.

Sincerely,

Mark

 So true, as I said from the beginning of the No-Code Licensing Scheme, the Code would be dropped, which it will be, I also said they written would be so easy it would be a Joke, which it is, the next batch of Whinning will be about why are we being forced to Memorize these 4Billion Q&As, why should I have to

waste my time on something that I will never use, I buy all my Stuff already
made and when it breaks I either replace stuff or send it out for repair,
besides all I want to do is talk on my Radio I could car less how it works.

Ed : Everywhere, except possibly ARRL HQ, TIME=MONEY. So time
saved=money saved. You've surely heard the old adage "A penny saved is a

penny earned". So money saved=money made, even at the FCC. Now they can spend pesonnel time on auctions with REAL $ involved.

The FCC is so disinterested in the future of the ARS that they have handed all decisionmaking to a single employee, one who is easily swayed by a couple of nerdy bullies representing a small group of the most clueless, and whose output is routinely rubberstamped by the commissioners without further thought. Nothing the other of the 700,000 odd ham radio licensees have to say gets any attention whatever. Larry or anyone else is supposed to believe that is in the best interests of ham radio's future?

Surely you are not suggesting that a person can fail the Morse test by
not knowing the abbreviation codes? Perhaps your tests are different,
but ours is simply a sending and receing test where a passage of text
```

must be transmitted or received vebatim. These codes and the use of Morse have no connection in the licence exams. In most cases, this sort of thing is picked up AFTER the test and so has little or no relevance in the licence exam.

> But only if he has a fair amount of training and experience in the use of radiotelegraphy. If he happens to have garnered a bit of English as the result of his efforts at international radiotelgraphy, so much the better for the breadth of the vocabulary we would have in common.

Interesting that you make no mention of you attempting to learn some of their language, but I must say it doesn't suprise me. Common courtesy obviously varies from place to place.

> It is not at all surprising that you would not know any of this. CW bashers never do.

Tsk, tsk. You confuse challenging your "logic" with challenging the mode itself. Although I personally don't like using Morse, I do my best to encourage anyone who wants use it. It is absurd lengths that some people to in an attempt to justify it as "special" that is worthy of ridicule.

Mark.

Hey, Ed . . you know I been lurking in this village for years and you
also know by now that I'm one to pretty much stick to the thread, I'm
not into switch & bait nonsense.
>
The discussion has been about the virtues of mostly IF DSP signal
processing vs. the virtues of mostly analog IF signal processing. You
and others have come off worshipful of the 756 PRO because it's
DSP-centric. I dumped in the K8ER piece which indicates that DSP in
the really good xcvs needs a lot of help from ancient analog filters
to do get top-notch performance. To the point where the guys who
designed the Mark V didn't bother with any DSP until all the way out
in he 4th IF. Sort of an accessory. Digital Q-multiplier.
>
DSP just ain't the big deal the chipsters claim it is as the 756 PRO
demonstrates.

I suppose it's too much for you to grasp that the code test is only the beginning of one's training in radiotelegraphy. Yes, we know many of you will never again touch a code key and some even go through elaborate burial rites for their first and only key. Many others, however, having been "forced" by their desire for a HF ham license, to learn the code at effective speed have-in the past- also learned , while in the process, that radiotelegraphy is a unique skill that has attributes all its own and is well suited to radio amateur communications. Thus good CW operators are made, none are born, contrary to NCI dogma.

A part of the discussion below raises an interesting question. It is noted
that [paraphrased] CW is a "universal" language. I have always heard
that--even from when I was still just a kid.

Yet, I have always wondered in what way is CW the universal language? If it
is simply meant that a dit is a dit and a dah is a dah, then what good will
that do for language other than "character" recognition. If a Russian sends
to me a hello and includes any kind of casual conversation (other than a
known format such as the RST), then how am I to know what he is saying?

This is true in any mode, of course. If I don't know Russian and someone

speaks it to me, I am not going to understand a word of it. But, the basis
of my question is in what way is it meant that CW is the "universal"
language? I think (and please correct me if I am wrong) that it just means
that every character in CW is the same all over the world. But does it mean
that I will fully understand everything sent to me from a language I do not
speak or read?

Len actually "CC"ed my post. Perhaps a milestone? We'll see.

>Article S25.5 is part of the regulation articles of the International
>Telecommunications Union...(snip)

Agreed, but not germane to the context of the post. All of that is already accepted as fact. It IS fact. It is the LAW. The SAME law that directs the implementation of code testing upon administrations that are signatory to the ITU.

>Robeson's comment above is simply misdirection on the subject.

It is misdirection of nothing. It IS fact. You have said so yourself in other posts.

>did not take place until vacuum tubes were available for radio
>transmitters, rather well after the creation of the first US civil
>radio regulation agency in 1912.

Historical fact and agreed without debate. However the post in question was an assertion by yourself that Morse Coded CW was the "only" method of communication at the implementation of the ITU and/or regulations directing the demonstration of Morse proficiency.

Per the very quote above, said was not correct.

>Gratuitous use of pejoratives, even in strong arguments, defeats
>any "righteousness" of the licensed's opinions.

An indirect acceptance by Mr. Anderson that I am correct. Thank you. Between this and your willingness to address me directly, we may have room to "discuss" things.

>Incorrect on all accounts. My absence of three weeks is irelevant.

No thing on Earth is irrelevant. Even you.

>The word "putz" is a Yiddish colloquialism for 'asshole.' Whether
>written in Yiddish or American English it is still a pejorative that
>does nothing for Robeson's cause.

We can come to a decision to cease it's application in as much as you have demonstrated a willingness to reign in your own "pejoratives".

>More use of gratuitous pejoratives, again doing nothing for

>Robeson's case, cause, or obsession.

Second verse, same as the first. You show restraint, so shall I. Amazing, isin't it...?!?!

>I simply comment, do not "demand" anything except to try to
>argue a subject on the subject's merits, not trying to drop into
>some battle-to-the-death on gratuitious insult hurling.

We disagree on the first. You DO "demand". On the second we can find neutral ground.

>The FCC has stated in Report and Orders 90-53 and 99-412 that
>it does not consider morse code skill testing to be relevant to its
>task of regulating US amateur radio. I have written so in the past
>in this newsgroup several times and will continue to remind others
>of those public documents.

And I have said those very same things. However YOU have stated on several occassions that the FCC has never made ANY statement to the effect of it's ultimate intent to drop code. As a matter of fact, you have stated in no uncertain terms that it is your perception that the FCC has NOT said anything "binding" in that regard, hence your persistence in "debating" continued Code Testing.

>Incorrect. Robeson does not speak (indeed, cannot) for all readers
>of this newsgroup.

My statement: >>And again you prove how arrogant you are. Not that anyone here is surprised.<<

At no point did I say I "spoke" for anyone.

>The code test retention-elimination argument is a volatile one with
>strong opinions on all sides.

Only among those who seem bent on perpetuating the "debate" even after the FCC has stated that they are themselves just waiting for the Fat Lady to sing.

>Use of personal insults not germane
>to the subject at hand is the "arrogance" demonstrated. Robeson
>has demonstrated that in countless displays of misology.

Just following your lead, Leonard. And you have broke new ground here today.....shall we see how long it lasts?

>Date: 6/9/01 6:48 PM Central Daylight Time

>Incorrect. I simply challenged Roll's assertion on requiring all
>newcomers to meet "long established standards" of entry; i.e.,
>the morse test.

It was not about challenging Roll on any front. It was about making assertions of "tenure" as validation of "correctness".

Present test criteria have little resemblence to tests of even recent Amatuer history.

>Why should standards continue just because they have never
>been removed?

Why indeed? Present "standards" have changed radically in recent years. Precious little change in life is so immediate and drastic. There is a reason for that. That it is not happening fast enough for you may be germane.

>89 years later that is no longer true.

Those of us who participate in Amateur Radio on a daily or near-daily basis already know this.

>What year was "then?" It is obvious that the USA does not
>now (2001) have a majority in world amateur radio.

Granted. And the Amateur Community has repeatedly asked the FCC to either make significant band changes accomodating that concept.

It is the FCC...NOT the ARRL or anyother boogeyman that has said "no".

Per YOUR assertions, the FCC, NOT any one organization or person, is the final arbiter of regulations. Is this not true?

>> And that the United States should "protect" the rights/needs/desires is part and parcel of the Constitution of the United States. Have you ever read that document, (pejorative deleted for detente's sake)

>Irrelevant comment and pejorative

As I said before, NO comment, even yours, is irrelevant.

>I was defending the Constitution
>of the United States in military service before Robeson was born.
>Gratuitous flag-waving and patriotic trumpeting by someone who
>was released from military service (rather than serving a full term)
>has no place in discussion of amateur radio testing regulations.

Congratulations on your years of service. However it does not negate the FACT that the Constitution of the United States AND numerous seperate acts since CODIFY the protection of certain minorities or subsets of our society.

Our nation was FOUNDED on the principle of making sure that EVERY person was allowed the opportunity to express themselves or pursue thier interests without impediment.

Do you deny this?

>Again irrelevant. The subject of the American Disabilities Act was
>not part of either Roll's message nor my comment to him.

Not irrelevant. You were discussing the protection by regulation of certain modes or practices by regulation. I pointed out that it is a basic principle of American custom to protect such rights and practices of minorities.

Do you deny that America does this?

>Roll made an assertion, based solely on the majority of no-code test
>advocates in this newsgroup and illogically connected to the assertion
>as if he could predict the future.

And HIS "predictions" are any more or any less accurate than YOURS...?!?!

>The only US civil radio regulatory agency is the FCC. They make
>the final decisions on US civil radio regulations by codifying them
>in Title 47, Code of Federal Regulations. Those final decisions are
>made after a period of comment by citizens concerning applicable
>radio services.

Then you agree with me that recent refusals by the FCC to make significant changes in "subbands" is THIER "fault", and not that of the ARRL or any other individual or organization...right?

>That and an
>attempt to mislabel my former occupation as "lower" than it was
>is also irrelevant to the subject of the original thread.

Were you not, at one point in time, an electronics technician? Yes or no...?!?!

>After an absence of three weeks it is clear that Robeson is still
>incapable of discussing any subject without use of puerile
>attempts at insult that have nothing to do with discussions.

You get this one free, Len.

Ed:

Trick question!  The FCC didn't *make* money from the Restructuring
decision, but it sure did *save* a bunch!  And don't look now, but that's
the whole point of their progressive deregulation of the ARS -- to stop
expending resources on a radio service which doesn't have any
significant economic importance!

Actually, the more demanding people I've known have been the overachievers. Personally, I consider myself to be a normal achiever, and I make only the most reasonable demands of others. Achieving the ability to pass a 20 WPM code test for an Extra class license was one of the most reasonable "demands" ever placed on me. I put "demands" in quotes because it really wasn't a "demand" at all, but a choice I had to make voluntarily.

The equipment is calibrated annually, usually in September. We use Essco near

Boston, if memory serves.

> I wuz gonna say something really nasty like sending yer reviewers out for
> recalibration while yer at it but I'll restrain myself.

Well, that was mighty nice of you not to say anything nasty about the reviewers.

Can you elaborate any on specific problems you attribute to reviews? I can pass along your view to Joe Bottilglieri, or you can contact him directly if you like. Normally, the reviewer gets to keep the radio for a few weeks. Joe also monitors all of the various "brand" (see, no quote here...) reflectors to see what problems may be reported, and then flags them back to the reviewer and the Lab.

I would agree that the process is not perfect and that omissions can and have occured, but I don't think I would go so far as to "not" say anything nasty. Can you offer some specific examples of why you didn't say anything about the reviewers?

Yes, and if one really wanted to compare--take out the "usual and customary fee" for QST (isn't there a set-aside amount that the ARRL says is compensated for in membership for the reception of the magazine?), take out the overhead for ARRL HQ and infrastructure, and there's probably just about or a little over $6.00 in there for that service. It all washes out. (In my case I am losing money, to some degree, because QST rarely even gets cracked open here).

One of the problems I have seen some folks have is in telling dits from dahs. Whether it happens constantly, or after a bit of mental fatigue sends it, instead of hearing di-dah-di-dit for "L," the student heard beep-beep-beep-beep. If that is what is happening to you, I suggest that you stop learning letters and perhaps concentrate on getting the dit-dah recognition to be automatic.

First, work on A and N until you can unconditionally tell them apart, no matter how tired you are. If you then work on Q,Y,L, F and C until there is no doubt in your mind that you are decoding the dits and dahs, you can then move on to memorizing letters again. This has another advantage -- it helps by letting you memorize the letters that seem to give most people trouble first, then move on to the easier ones. :-) BTW, several people have told me that my suggesting that they work on the dit-dah recognition first has gotten them over the barrier quite quickly.

If it is a question of you are hearing the dits and dahs, but not recognizing the letter before the next one starts, that is generally a question of practice. I presume you are using Farnsworth spacing, so decrease the wpm sent and/or the speed of the individual characters until it works for you, then start speeding it up.

About a half hour a day tops is about right. You can even break it up, or combine it to a bit more time every other day.

Okay, very last, relax! Especially at practice, missing a letter or two is NOT the end of your ham radio aspirations. It comes with time, and in the real world, I miss chunks of sent CW in QSOs all the time. If I get the meaning of what was sent, I do not have to ask for repeats. It is much like talking to someone in a noisy room; you get most of it, and don't have to ask for every word.

Now, think of how the test relates to real-world QSOs. In a conversation, you don't write down every word someone says. At worst, you may take notes. Now, if you can copy 100%, go for it; that is the surest way to pass, and you only need 25 right in a row. But copying code fast and writing fast are two separate skills, and sometimes trying to combine them jumbles things up. So spend some of your time practicing with your pencil down. Learning to copy by ear is THE skill that pushes one over the higher-speed barrier and it may help you at slower speeds by focusing you on the code itself. Once you get past that, you can add writing back to the mix.

When I am in QSO, I don't write down every word at 20+ wpm; I take notes. *IF* you can't do 100% copy in the test, switch over to a taking notes mode. If the QSO sent says "THE RIG HERE IS A KENSU DX-100" you can bet that the questions won't ask you about the word "the." If you jot KENSU and DX-100 on your copy sheet, you should be able to pass. And, IMHO, it ain't cheating -- that is exactly what I do in a QSO.

Just a few suggestions; I sure hope one works for you. I will add one more. When you pass the test, consider giving the mode a go on the air from time to time. Contrary to some, it is not a great test of character, but a very enjoyable mode that can be relaxing and hypnotizing, all at the same time. It is also a great mode to use to homebrew simple rigs or to make QSOs using incredibly low power -- I still brag about my 1 milliwatt to Europe late one evening on a 20-meter "chordal hop."

Best of luck.

>cracked open here).

That's okay, Kim; I don't read QST from cover to cover, either; that is not my reason for being an ARRL member. But I do suggest you flip through the issues every month when they come in. Over the course of decades of hamming, you will change and grow, as did we all, and what doesn't interest you today may interest you in the future and what seems way too technical now will seem just right someday sooner than you think. Having seen it in the mag, even if you don't read it, will jog your memory so you can find it again.

I can believe it. My wife is going to college right now (studying to be a teacher - dual major in science and secondary education). Some of the students seem to have no concept of homework (the students in the core classes she just finished were the worst). She was telling me just the other day that she has no idea what these students are majoring in, but she hopes it isn't anything serious. As you can probably tell, we're both a little older (like old enough to be these kid's parents).

However, I'm not that old - I can remember back that far. However, I seem to remember going on my first date at about 12 (she was an older woman - 14), so we may even lose a few if we target the 11-14 year old group. But that is probably the best group to go after - old enough to understand it, but not old enough to have all the other distractions.

It should be something really simple - a few parts and a box. The idea is to link it to the study material for the license exam (to make that material more real). It doesn't have to do anything fancy - maybe receive a certain frequency range on a single band and transmit code at really low power level. Anyway, I don't know the details. It's just an idea that popped into my head.

I was thinking of something more basic, more in line with reinforcing the electronics in the license study guide. For example, a really basic radio kit (something that would not require great knowledge to put together) that might receive a few frequencies and perhaps transmit code. Well, like I said earlier, I doubt this will fly.

You're probably right. I don't think a new license is truly possible at this point anyway, especially since the FCC recently reduced the number of license classes. But it is a thought, and probably something that should have been done about 25 years ago.

Dwight:

Uh hunh. I see. So, now you're whining about how much I've
written about code testing? Is there now something new threatening
the underachievers -- people who are proficient typists?

> In other words, my friend, when it comes to
>whining about CW (testing, etc), you are the undisputed world champion.

Wrong again, Dwight. I don't "whine" about CW testing or anything
else. I whine about weak, lazy, unmotivated people who whine about

code testing. If you're going to be a whine critic, please make sure
you're reading the labels correctly.

Cecil:

The point of code testing is to retain the potential communications
capability of the relatively small percentage of code-tested hams
who do, in practice, embrace the Morse/CW mode and continue
to use it -- thus retaining and/or increasing their proficiency at
the tested level and beyond. The "rub" is that one usually does
not begin having satisfactory on-the-air experiences with CW until
they are at or beyond the 13 WPM level -- which I see as a main
reason for the long-established requirement of 20 WPM for an
Amateur Extra class license. If testing had ended at 5 WPM,
I probably would not have become a long-term CW user myself --
and I doubt that many will in the future.

>either...

Ed:

The point is, if no requirement for me to send/receive faster than 5 WPM ever existed, I most likely would not be able to do so now. It is my strong belief that reducing the testing requirement to 5 WPM will, in fact, bring an eventual end to the *use* of CW in the ARS due to the fact that a rapidly declining base of users will force changes in present bandplans to permit voice mode operation in presently CW/DATA band segments. Virtually to a man, the NCTA's insist that they have nothing against the *use* of CW -- but they strongly object to the only thing that ensures that CW can continue to be used by a significant portion of hams. This is one reason why I've always recommended total grant of voice spectrum for the Gen/Adv classes, and retaining the Extra-class and it's DX-rich spectrum as main prize for CW aficionados. Why this compromise never gained any traction, only the FCC knows. I do know that this proposal, and others like it made during the comment period on the Restructuring NPRM, received a great deal of consideration. The fact that this win/win compromise never made it into the final ruling suggests to me that the best interests of the ARS had little to do with the final decision.

Ed:

Now, *there* a shock! Yawn!

>The position requires someone who can deal with HQ staff and
>outside people without using a virtually non-stop barrage of insults and
>innuendo.

Hmmm -- considering the amount of cynicism, arrognace, and general
disrespect I've received at the hands of ARRL HQ staffers over the years,
beginning with my very first personal visit, I would not have considered a
lack of "people skills" to be much of a problem!

>I am afraid that your track record on rrap would convince anyone
>who wanted to hire you that you are unsuitable for a position that deals with
>people.

Well, my "problem" with ARRL HQ staff predates my alleged "fame" on rrap
by almost a decade. How do you explain that?

>As I had openings in the Lab, I looked to see if any of the candidates had
>done posts to newsgroups. I cared not one whit about which side of the
code-test
>fence they were on, but would have evaluated the way they expressed their
>views. Not everyone in the Lab agrees with my personal view on code testing,
>Larry, nor do I care if they do.

Well, from my own point of view, I would have thought that their ability to
do the job would have been more importance than their "demeanor" on an
open discussion forum such as this. However, in your position as a
manager in an organization that cannot afford to offend prospective
members, I cannot say that I disagree with your thinking. You see,
whether you admit it or not, maintaining the proper level of "political
correctness" is vital to your continued employment prospects as well.
Remember the saying, "We live in a democracy, but we don't work in
one."

>Just as a counter example, I can think of one very vocal NCTA who no longer
>posts on this forum that I would not hire for the same reason as I would not
>hire you, although he did manage to get a grip on his emotions and at least
>try to be more productive in his postings.
>
>Does that help?

Not really, because for it to do so, I'd have to agree with your faulty
premise that I don't have a "grip" on my emotions. The restraint I've shown
in the past few weeks should show exactly the opposite. If you require
an explanation, please E-mail me.

>Your presense might 'alienate' a no-coder and "*force*" him away from
>plunking down his money on a membership. Got it, Larry?

Dick:

As I'm sure you already knew, I had no doubt as to what Ed's response would
be. And I don't really blame Ed for having this position. He works for a
large membership-based organization that is dependent on the support of it's
members both present and future. Their biggest nightmare is the possibility
of offending a bloc of prospective members, therefore they tow a very carefully
balanced, politically-correct line at all times. Ed can no more speak out
in favor of code testing here than he can fly -- and he damn well knows it.
I really don't blame him for protecting his job -- I also have something of

a "dream job" but must put up with a formidable array of annoyances in order to keep it. However, Ed simply cannot avoid the fact that everything he says here carries with it the weight of ARRL HQ policy, and his career-essential support thereof.

And Im sure the ARRL would help, by the way ED since ARRL is now very interested in CB, when are they going to start issuing WAS for CBers and Freebanders, and when are we going to start getting some good Articles on CB and Free Banding from ARRL, and how about a section in QST just for CBers and Freebanders, come on ED if ARRLs new love is CBers and Freebanders tell them to stop beating around the bush and do it. Who knows Ed they might be able to sell some more Fun Meals and T-Shirts.

  Exactly and thats why Ed is kissing up to the CBplussers, his Boss probably
told him to get on there and kissup to the New ones, with hope they would suck
in the new ones, but from what I hear on alot of local "CB 2 Meter Repeaters"
there not interested..

 Public Service----- Borrrrring
 DXing----Do I need ARRL for this?
 Technical Articles--- When did they start that.
 Product Reviews---Big Deal marketing Scheme

 Yea your right sure do need  ARRL.

In article <FggU6.4150$p%4.374010@newsread2.prod.itd.earthlink.net>,
"Kim-W5TIT" <nospam@none.net> writes:

> I think there is a bit of difference between posting in the
>interest of debate, and posting through contemptuous anger, such that the
>sneering can almost be heard through the monitor of a computer.

I agree 100%. There's no shortage of that sort of stuff around rrap - on any
side of any issue.

>It is the
>sneering, seething anger that "posseses" those who are so wrapped up in just
>plain anger.

True. There is also the fact that what is written here can be misinterpreted.
One writer's humor can be read by some as anger or insult.

>Anger controls and overpowers those who let it.

Sure - but anger also has a purpose. I recall a man who got angry at seeing the
money changers in the house of God.

>Goodness
>knows, I let myself get wrapped up in it before.  Then, I considered the
>source(s).

Well, there you go.

Nothing wrong with getting angry as long as it doesn't control a person or lead
to violence. On the other hand, some people don't allow themselves to feel
strongly about anything. That's worse.

Yes, but he acted and corrected the problem. He did not then continue to be angry at everyone who entered the temple thereafter because they might have a propensity to be money changers.

That's *MY* point, Brian. Demonizing *ALL* CBers is just as bad as racism
or sexism.

>>All CBers demonized themselves?

>And the ARRL will help to DE-DEMONIZE them

Those that are not demons will have nothing to fear in either direction, Bruce.
ARRL will pay no more or less attention to CB than it does to other radio

services, I would imagine, other than to continue to recognize that it represents the same potential pool of Amateurs that it did when I realized that ham radio was a lot more fun than CB in 1963.

If you need to see demons behind every bush, you are welcome to do so. I see Amateur Radio in a much more positive way. I wonder which point of view has more followers?

From another venue...The opening salvo....

For those who have been concerned about the dumbing down of amateur
radio,
be advised:

A discusssion paper from the ACA has just been released for comment. In
the
context of administration of amateur exams it raises many other issues.
The
key quote reads:

"Certification in respect of the amateur radio service has been considered important for the manging of interference to other communications services and generally regulating the use of a valuable resource. It is open to debate whether a 'once only' demonstration of a person's knowledge by examination, particularly given that most amateurs use commercially manufactured equipment, continues to serve those purposes. Could, for example, interference and operating procedures be just as well managed by license conditions and by requiring that only commercial equipment of a certain 'standard' is used."

There are rumours that similar proposals are being circulated in Europe.

The sad thing is that this move is likely to be welcomed by many amateurs, manufacturers and national amateur radio organisations.

and a response.....

Dissent is alive in Austrailia, I am sure. When you folks passed the draconian gun laws, there was a national scarcity of 6 inch schedule 40 PVC pipe. A lot of folks burried a lot of guns down under. There will be the hold outs in the amateur community as well who will say, what the hell, "give me liberty or give me death," and continue to build and experiment.

>Well, my "problem" with ARRL HQ staff predates my alleged "fame" on rrap
>by almost a decade. How do you explain that?

Chances are, Larry, before your "fame" on rrap, you might have been able to get
a job at HQ. No one would have known enough about you to have known about you.

>Well, from my own point of view, I would have thought that their ability to
>do the job would have been more importance than their "demeanor" on an
>open discussion forum such as this.
Much of the job of the ARRL Lab staff involves contact with members, FCC,
industry and the like. Demeanor is critical to the success of that job.

> However, in your position as a manager in an organization that cannot afford
to
> offend prospective members, I cannot say that I disagree with your thinking.
> You see, whether you admit it or not, maintaining the proper level of
"political
>correctness" is vital to your continued employment prospects as well.

If you are saying that I need to be courteous in my dealings with people, I
agree. But if you really need me to say it, ... Duh!

Um, Larry, ARRL's present position wrt Morse code testing has not changed. It has made a policy decision that it will not devote ARRL resources to opposing any changes of S25.5. It has also affirmed that its present policy that it supports the retention of Morse code testing for HF access in the US will not change. In what way could I not speak out in favor of code testing in the face of that policy?

> also have something of a "dream job" but must put up with a formidable array
of

Larry thinks a dream job is annoying. How odd.

>However, Ed simply cannot avoid the fact that everything he says
>here carries with it the weight of ARRL HQ policy, and his career-essential

>support thereof.

Duh! I think that has been explained to you a number of times, Larry. What you don't seem to get, though, is that those things I say here are the things I choose to say here. ARRL could give two rats butts about whether Ed Hare posts his views on rrap, or anywhere.

If you must see things in black and white, you are welcome to do so, but at this point, I trust that folks understand that most issues have subtleties that are apparently not part of your limited comprehension. 'Tis a pity; you are missing out on a lot and really should expand your horizons.

73,
Ed Hare,

Actually, it sounded like a reasonable idea to me. I think that this could be done at Part 15 emissions limits, with a range of about 300 feet or so. The biggest difficulty is that even a kit is SUPPOSED to be FCC Certificated, which is a rather interesting excercise, as I have been learning of late.

I would suggest that it also include a voice mode, thouhgh, to increase the interest.

A "language" is something that can convey "thoughts, feelings, etc."
(Collins Concise Dictionary). This thread is a language in action.
This exchange of ideas, or anything remotely like it could not be

carried out use the Morse symbols unless the people share a common language. It is nonsense to suggest that the abbreviation codes often used WITH Morse Code (and, indeed, used in many spoken or data exchanges) comes anywhere near a "universal language", limited or not.

> All the Q
> signals mean the same thing, whether in French or Swahili. All the
> prosigns too. The universal Z codes haven't changed in many decades.

Indicating that if these abbreviations were, by some perverse logic, really classified as a language, it would also be classified as a dead language.

> Added to that, most of the civilized world knows that English is the
> universal communications language, and REAL communicators know and learn
> enough of it go get by, whatever their native tongue.

I do like the (il)logic at work here. You say Morse allows people to communicate without sharing a common language, but then point out that learning English is still required - "English is the universal communications language, and REAL communicators know and learn enough of it go (sic) get by".

The perverse logic that thinks simply changing the symbol that represents a letter or number creates a new language opens up a whole new vista. I suddenly realise that I'm fantastically multi-lingual because I can read Arial, Times and hundreds of other "languages". In fact, each time I add a new font to my computer, my language skills expand considerably. Why, when I take bold and italics into account, my languages skills are enormous.

Clearly, that was nonsense. I do not know a new language simply because someone changes the symbolic represntation of the letters. Tapping out a letter in Morse Code is simply an aurual equivalent of writing down a letter. There is no change of language, just a font change. ;-)

Mark.

>Um, Larry, ARRL's present position wrt Morse code testing has not changed.

I disagree Ed.

>It
>has made a policy decision that it will not devote ARRL resources to opposing
>any changes of S25.5.

Right. That's a policy change. Previous to the January BOD meeting, the policy was that ARRL leadership supported S25.5. Now the policy is "ARRL doesn't care what happens to S25.5". That's a BIG policy change.

>It has also affirmed that its present policy that it
>supports the retention of Morse code testing for HF access in the US will not
>change.

That's NOT what I read.

What I saw is that the ARRL BOD will continue to support code testing as an FCC requirement. But that policy is open for review and change at any time.

And anyone who looks at the big picture can see the problem: FCC has repeatedly said that S25.5 is the ONLY thing that is keeping code testing alive in the USA. Their exact words were that code testing serves "no regulatory purpose" other than conformity to S25.5. I'm no lawyer, but that's pretty unambiguous to me.

If S25.5 goes (some folks would even say "when S25.5 goes"), the FCC will almost certainly drop code testing for US ham licenses - maybe even before being petitioned to do so. The current ARRL BOD position will carry no weight with the FCC unless something else changes.

> In what way could I not speak out in favor of code testing in the
>face
>of that policy?

```
You have always made it clear what your personal opinion was, and that it was
your opinion, not ARRL policy. That's a good thing. Too bad so many do not
realize that ARRL BOD policy is made by the BOD, and nobody else in Newington.
And the BOD is elected by the members.

>
>Ed:
>
>The point is, if no requirement for me to send/receive faster than 5 WPM
>ever existed, I most likely would not be able to do so now.

Irrelevant.  Personal experiences do not constitute any reason
for retention of "long established" standards in a technically
oriented activity that is constantly advancing.

>It is my strong
>belief that reducing the testing requirement to 5 WPM will, in fact, bring
>an eventual end to the *use* of CW in the ARS due to the fact that
```

>a rapidly declining base of users will force changes in present bandplans
>to permit voice mode operation in presently CW/DATA band segments.

The USA is in a distinct minority of nations who have established
bandplans on HF to favor a minority of amateur licensees.

As has been pointed out by others, if morse code skills are so
personally enjoyable by a majority, then the mode will stand on
its own without need of federal "subsidy" through license testing
of code skills..

>Virtually to a man, the NCTA's insist that they have nothing against
>the *use* of CW -- but they strongly object to the only thing that ensures
>that CW can continue to be used by a significant portion of hams.

There is no logical basis, certainly no factual basis for this assertion.

>This is one reason why I've always recommended total grant
>of voice spectrum for the Gen/Adv classes, and retaining the Extra-class
>and it's DX-rich spectrum as main prize for CW aficionados.

That is still favoritsm for a minority.

> Why
>this compromise never gained any traction, only the FCC knows. I do
>know that this proposal, and others like it made during the comment
>period on the Restructuring NPRM, received a great deal of consideration.

Roll knows nothing of the kind but assumes "insider" knowledge
when he has none. The FCC has publicly made its decisions with
regard to 98-143 well known. Everyone who cares to access
99-412 can see that for themselves.

>The fact that this win/win compromise never made it into the final
>ruling suggests to me that the best interests of the ARS had little to do
>with the final decision.

Assumption. To Roll and some like-minded in a distinct minority,
"Roll's" compromise was "win/win" but did not or could not be seen
to be any advantage for all US citizens affected by US amateur radio
restructuring. The FCC decides the "final decision" based on input
from all.

No "final decisions" will be universally acceptible. Roll wishes to
direct or be the final arbiter on What Is Good For Amateur Radio.
Actually, all that Roll promotes as being "good" is solely based on
Roll's individual personal experiences/emotions/pride/etc. That has
been a constant for years.

Misology continues to be the SOTA of the long-tenured...

>The point of code testing is to retain the potential communications
>capability of the relatively small percentage of code-tested hams
>who do, in practice, embrace the Morse/CW mode and continue
>to use it -- thus retaining and/or increasing their proficiency at
>the tested level and beyond.

Incorrect.

The political aspect of code testing is S25.5. This came about as a result of very early radio when nearly every radio service used OOK CW codings (the only mode technically possible). Way back over a half century ago, the morse code test was logical from the standpoint of mitigating interference.

The emotional aspect of code testing comes from several generations of constant mental directions by the old-timers (of each generation) to maintain "correct" standards and practices in amateur radio as they "properly" (righteously) did

it. The end result was a minority of code-proficient individuals
who claimed "superiority" on the sole basis of code skills.

>The "rub" is that one usually does
>not begin having satisfactory on-the-air experiences with CW until
>they are at or beyond the 13 WPM level -- which I see as a main
>reason for the long-established requirement of 20 WPM for an
>Amateur Extra class license.

Irrelevant. The "long establishment" has no basis for continuation
as a license test requirement in an activity that cannot be older
than 105 years (radio, as such, started in 1896).

In the USA the FCC is the final arbiter on what constitutes the
proper requirements, not the ARS "community" nor individuals
who are self-styled stewards of standards on the basis of
tenure after meeting old test requirements.

The FCC has stated publicly "long ago" (11 years) that morse
code skills are not considered as requirements for an amateur
radio license as part of the FCC's task of civil radio regulation.

>If testing had ended at 5 WPM,
>I probably would not have become a long-term CW user myself --
>and I doubt that many will in the future.

Again irrelevant. Roll is not the model of US amateur radio nor
the controller/regulator of "proper" license testing standards. Even
the US ARS "community" is not the controller/regulator despite
the insistence of the long-tenured licensees bravely waving their
flags of conquest and "turf."

Not incorrect. Voice communications have been possible since way before the implementation of S25.

>The emotional aspect of code testing comes from several
>generations of constant mental directions by the old-timers
>(of each generation) to maintain "correct" standards and
>practices in amateur radio as they "properly" (righteously) did
>it.

The "emotional" aspect of "code testing" comes from Amateurs who get thier dander up from punk scum NON-licensees who deem it important to suggest THEY know what's better for Hams...Code or NO code.

>The end result was a minority of code-proficient individuals
>who claimed "superiority" on the sole basis of code skills.

You go away for a few days making this forum tolerable to read (although WA8ULX has resurfaced, spamming the NG in your stead) and you return to do nothing but resume your campaign of lying and insinuation.

What a putz.

>Irrelevant.

Only a lying scumbag like you DEMANDS his "rights" to express opinions in a public forum and then sweepingly dismisses as "irrelevant" the opinions of others.

>In the USA the FCC is the final arbiter on what constitutes the
>proper requirements, not the ARS "community" nor individuals
>who are self-styled stewards of standards on the basis of
>tenure after meeting old test requirements

They are tghe "final arbiter" AFTER having processed the input of the public through the NPRM/RO process.

>The FCC has stated publicly "long ago" (11 years) that morse
>code skills are not considered as requirements for an amateur
>radio license as part of the FCC's task of civil radio regulation.

You acknowledge this in no uncerain terms yet you repeatedly deny that the FCC has said these very things in other posts. Only when an assertion meets YOUR "Message Points" do you do so.

>Again irrelevant.

And again you prove how arrogant you are. Not that anyone here is surprised.

Why sure Ed,

>Can you offer any examples of this "usual" anti-CBer line?

Cut from:

http://www.fcc.gov/Bureaus/Wireless/Orders/2000/da001907.txt

"The ARRL opposes the Petition on the grounds that this proposal seeks to redefine the purpose of the CB Radio Service by allowing long-distance CB communications, which would undermine the core distinction between the CB Radio Service and the Amateur Radio Service. Similarly, Collin Dvork (Dvork) states that the rule should not be revised because the CB Radio Service is not a DX (long-distance) service, and someone who wants DX should obtain an amateur radio license and use bands that are allocated for it. The NAB also opposes the Dixon Petition. It states that the restriction in Section 95.413(a)(9) is necessary to deter CB operators from operating at power levels in excess of those permitted under the Commission's rules, and that consumers must be protected from illegal CB radio transmissions that interfere with radio, television, telephone, and other forms of electronic communication."

That was from the league itself. All CBers who work DX will automatically employ illegal amplifiers. If they're going through the trouble to change this rule via proper protocol, seems to me that they are NOT predisposed to break the law and respect the system. From the general populace, the words "CB General," "Chicken Bander," (a classic) "Dopey CBer," (that one's from my bio on QRZ) etc...I could go on but I trust you get the idea.

>I believe
>that ARRL should remain devoted to Amateur Radio, I also bear no animosity at
>all against the legit CB operator. Why should I?

That's a good thing. I don't believe they have anything against you personally, AR as a whole, or the league either. (Sans the FUBAR re. RM-9807. Yes, remain devoted to AR, but throw your hat into the 11 meter arena, i.e. RM-9807, and expect a reaction...and rightfully so, I might add.)

>The ones I do have a problem with, personally, are those that are NOT CBers
>but
>choose to operate outside the CB bands or those using high-powered
>amplifiers.
>

I'm with you 100% on the issue of "high-powered amplifiers" and equally so on the 10 & 12 meter incursions from unlicensd ops, however......You already work for many of "those who HAVE operated outside the CB bands." It's a done deal, can't take back the past. Some licensed amateurs (and NOT lids, I should add) have come from the...uh oh, here it comes...the "freeband." Sorry, not my wish...just the facts, sir. Please don't ask me for names. Although I know quite a few...to ask for names as proof is pointless as the subject requires obvious discretion. I'll be happy to lay down my story to you via e-mail though, all you need do is ask.

 >I have heard from a number of hams who are resolving RFI problems with
>neighbors, but do not recall even a single instance of a "CBer" with an amp
>asking for my help.

While I'm in agreement with you, I will at least offer myself again as an example of an 11 meter operator who was proactive from the "get-go" wrt RFI prevention. I've never had a complaint and solicited reports from my surroundin neighbors. You asked for examples, I've offered up myself at the risk of being "demonized" by some of the less agreeable posters in this NG.

>15% of the hams that contact us with a question are not
>current members.

Don't expect that stat to hold true when specifically queried re. the leagues position on 11 meter issues. No issues?...RM-9807?! (also expect not to be let off the hook easily)

>It stands to reason that those that think they are above the
>law wrt radio operation would probably not be too ashamed to ask ARRL about

>RFI
>if they wanted to fix it.

Again, I offer exhibit #1..."the man in the mirror." (Gee, sounds like a nifty song title.)

Hi again Ed,

>Actually, from what I can tell, the 2950DX is not nearly as easy to mod as
>the
>non-DX model. The mods listed on the mods sites for the "new" 2950 did not
>work on the one I checked in the Lab. If you have any info to the contrary,
>let me know.
>

Yeah, still that easy, Ed. They wen't from the standard PCB to a SMT (Surface Mount Technology) board. To convert the newer radios to continuous TX coverage a module is now available from RCI, plug and play. It's really no more sinister than the beloved microswitch just below the wire bundle, behind the top panel on the beloved "freebander" legend, the Yaesu FT-757GX.

The mods for both are commonly found on various websites. A Google search should do the trick.

73 de Bert
KC2HMN

P.S. They did have a series (or production run) that was supposedly
unmodifiable. Money talked and that version went the way of the Do-do.)

>the 2950DX is a 10-meter radio. I was checking to make sure that
>moving a jumper on the PC board didn't turn it into a freeband radio.
>

You need to reference the PCB series# for the correct mod, i.e. EPT-69xx. Hope
that helps.>your true plans are showing.
>

BTW Bruce, I use a President Lincoln 10 meter radio, "fully opened,"
(26.0000MHz through 29.9999MHz) in conjunction with a 2 meter transverter. Ed,
that's a better reason to be checking a radio's modifiability (Is this a
word?:-)) rather than "to make sure that moving a jumper on the PC board didn't
turn it into a freeband radio."

It takes a bit more than a jumper.

In article <20010609163442.21646.00001114@ng-fn1.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) writes:

>>The political aspect of code testing is S25.5. This came about as

>>a result of very early radio when nearly every radio service used
>>OOK CW codings (the only mode technically possible). Way back
>>over a half century ago, the morse code test was logical from the
>>standpoint of mitigating interference.
>
>   Not incorrect. Voice communications have been possible since way before
>the implementation of S25.

Article S25.5 is part of the regulation articles of the International Telecommunications Union, specifically one of the eleven specifically describing amateur services and amateur-satellite services. The ITU is a United Nations body. The UN did not exist before 1945. Voice broadcasting existed prior to 1945. So did the CCITT, the predecessor of the ITU.

Robeson's comment above is simply misdirection on the subject.

The first use of voice modulation occurred in 1906, using a water cooled microphone modulating a field winding of an LF alternator-generator (Fessenden). Further "voice" broadcasting did not take place until vacuum tubes were available for radio transmitters, rather well after the creation of the first US civil radio regulation agency in 1912.
